

# Take Oracle 1Z0-1124-24 Web-Based Practice Test on Popular Browsers

BTW, DOWNLOAD part of ExamCost 1Z0-1124-24 dumps from Cloud Storage: <https://drive.google.com/open?id=17eiSy0XCUrkJg7N7j3pS5fniQQcVKNS>

It is a challenging exam and not a traditional exam. But complete Oracle 1Z0-1124-24 exam preparation can enable you to crack the Oracle 1Z0-1124-24 exam easily. For the quick and complete Oracle Cloud Infrastructure 2024 Networking Professional (1Z0-1124-24) exam preparation you can trust 1Z0-1124-24 Exam Practice test questions. The Oracle 1Z0-1124-24 exam practice test questions have already helped many Oracle 1Z0-1124-24 exam candidates in their preparation and success.

Facing the incoming 1Z0-1124-24 exam, you may feel stressed and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun. You will be feeling counteracted the effect of tension for our 1Z0-1124-24 practice dumps can relieve you of the anxious feelings.

>> 1Z0-1124-24 Top Questions <<

## 1Z0-1124-24 Study Test | 1Z0-1124-24 Latest Training

It is our promissory announcement that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our 1Z0-1124-24 practice materials are totally the perfect one. Different from all other bad quality practice materials that cheat you into spending much money on them, our 1Z0-1124-24 practice materials are the accumulation of professional knowledge worthy practicing and remembering.

## Oracle Cloud Infrastructure 2024 Networking Professional Sample Questions (Q45-Q50):

### NEW QUESTION # 45

For secure and efficient bulk data transfer during an on-premises database migration to OCI, which service is most suitable?

- A. Oracle Database Cloud Service
- B. FastConnect Virtual Circuit
- C. Data Transfer Service
- D. Object Storage Gateway

**Answer: C**

Explanation:

A) Object Storage Gateway: This service facilitates transferring data directly between on-premises storage and OCI Object Storage, but it's not specifically designed for database migrations. It might not offer the optimized performance and security needed for large database transfers.

C) FastConnect Virtual Circuit: This option provides a dedicated, high-performance connection between your on-premises network and OCI, improving overall network speed. However, it doesn't directly address data transfer itself and requires additional tools for database migration.

D) Oracle Database Cloud Service: This service offers comprehensive database migration capabilities, including secure transfer options. However, its focus is on managing the entire database migration process, which might be overkill if you only need a secure and efficient tool for transferring large data volumes.

B) Data Transfer Service: This service specializes in securely transferring large datasets to and from OCI. It offers several advantages for your scenario:

Security: Utilizes private network connections and encryption for secure data transfer.

Efficiency: Offers high-performance data transfer with minimal latency and congestion.

Scalability: Handles large datasets effectively and adapts to varying transfer needs.

Flexibility: Supports various data sources and targets, including databases.

#### NEW QUESTION # 46

Your information security team has informed you of a compliance policy that prevents outbound connections to the Internet or usage of publicly accessible IP destinations. You are designing your Virtual Cloud Network (VCN) for access to Oracle's Autonomous Data Warehouse service.

Which of the following virtual networking resources should you deploy to achieve this goal?

Response:

- A. Service Gateway
- B. Internet Gateway
- C. Network Address Translation Gateway
- D. Private Endpoints

**Answer: D**

#### NEW QUESTION # 47

BGP peering session is operational, but traffic isn't flowing as expected. Which action could help diagnose the issue?

- A. Enable public IP addresses on both sides of the connection.
- B. Increase the DRG bandwidth to handle more traffic.
- C. Verify and adjust BGP neighbor configuration on both sides.
- D. Restart the on-premises router and the DRG instance.

**Answer: C**

Explanation:

Targeted troubleshooting: This option directly addresses the BGP peering configuration, which is the core mechanism for route exchange and traffic flow between the OCI network and your on-premises environment.

Root cause analysis: Checking and adjusting parameters like neighbor IP addresses, AS numbers, and route advertisements can help pinpoint where the configuration might be preventing traffic flow.

Minimal disruption: Compared to other options, verifying BGP configuration is generally less disruptive and doesn't introduce unnecessary changes to the network infrastructure.

While the other options might be relevant in some situations, they are not as directly related to diagnosing the specific issue of traffic not flowing:

A). Increase DRG bandwidth: This might be a solution if the issue is bandwidth limitation, but without understanding the root cause, it could be an unnecessary expense and not address the underlying problem. B. Enable public IP addresses: Public IPs are not essential for BGP peering and might introduce security concerns. They should only be considered if specifically required for your network design and wouldn't directly fix traffic flow issues. D. Restart router and DRG: Restarting infrastructure might temporarily resolve issues, but it doesn't provide insights into the root cause and could be disruptive if done without proper analysis and backup procedures.

#### NEW QUESTION # 48

Which of the following VCN gateways allows private resources in your VCN to securely communicate with on-premises networks using IPSec tunnels?

- A. Service Gateway
- B. Internet Gateway
- **C. Dynamic Routing Gateway (DRG)**
- D. NAT Gateway

**Answer: C**

Explanation:

Internet Gateway: This gateway only allows outbound traffic from your VCN to the internet, not secure communication with on-premises networks.

NAT Gateway: This gateway provides outbound-only internet connectivity for private resources, not for communication with on-premises networks.

Service Gateway: This gateway facilitates private connectivity between your VCN and Oracle Cloud Infrastructure services, not for on-premises networks.

Dynamic Routing Gateway (DRG): This gateway serves as a central hub for routing traffic between your VCN and other networks, including on-premises networks via IPsec tunnels. It enables secure communication by establishing encrypted connections with your on-premises VPN device.

#### NEW QUESTION # 49

Your VCN requires both public and private subnets. Which of the following address allocation strategies is NOT recommended?

- A. Use the same CIDR block for both public and private subnets.
- **B. Use overlapping CIDR blocks for public and private subnets.**
- C. Allocate CIDR blocks based on the expected number of instances in each subnet.
- D. Allocate separate CIDR blocks from the same pool for public and private subnets.

**Answer: B**

Explanation:

Routing complexity: Overlapping CIDR blocks for public and private subnets can create complex routing challenges within the VCN. Routers might get confused and misdirect traffic due to ambiguous address spaces.

Security risks: Overlapping ranges increase the potential for accidental exposure of private resources to the public internet. This can have significant security implications.

Best practices: Industry best practices and security guidelines always recommend clear separation between public and private address spaces within a VCN to ensure proper routing and maintain a strong security posture.

While the other options have their nuances, they are generally considered acceptable approaches:

A). Use the same CIDR block for both public and private subnets: This can be done, but it is not the most common or recommended approach. While technically possible, it can lead to routing complexity and make it harder to manage security policies separately for public and private networks. B. Allocate separate CIDR blocks from the same pool for public and private subnets: This is a common and recommended approach. It provides clear separation between public and private address spaces, simplifies routing, and facilitates better security management. D. Allocate CIDR blocks based on the expected number of instances in each subnet: This is considered a good practice for optimizing resource utilization. Allocating larger CIDR blocks than needed wastes address space, while smaller blocks might need subnet splitting later if the instance count grows.

#### NEW QUESTION # 50

.....

ExamCost regularly updates Oracle Cloud Infrastructure 2024 Networking Professional (1Z0-1124-24) practice exam material to ensure that it keeps in line with the test. In the same way, ExamCost provides a free demo before you purchase so that you may know the quality of the Oracle Cloud Infrastructure 2024 Networking Professional (1Z0-1124-24) dumps. Similarly, the ExamCost Oracle Cloud Infrastructure 2024 Networking Professional (1Z0-1124-24) practice test creates an actual exam scenario on each and every step so that you may be well prepared before your actual Oracle Cloud Infrastructure 2024 Networking Professional (1Z0-1124-24) examination time. Hence, it saves you time and money.
