Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which of the following commands creates an archive file `work.tar` from the contents of the directory `./work/`?

- A. `tar -create work.tgz -content ./work/`
- B. `tar work > work.tar`
- C. `tar work.tar < ./work/`
- **D. `tar -cf work.tar ./work/`**
- E. `tar --new work.tar ./work/`

Answer: D

Explanation:

Explanation

The tar command in Linux is used to create, extract, list, and manipulate archive files¹. The -c option tells the command to create a new archive file. The -f option specifies the name of the archive file. The last argument is the name of the directory or file to be archived. Therefore, the command `tar -cf work.tar ./work/` will create an archive file named `work.tar` from the contents of the directory `./work/`. The other options are either invalid or do not create the desired archive file. Option A uses an unrecognized option `--new`. Option C uses an incorrect option `--content` and an incorrect extension `.tgz` for a plain tar archive. Option D and E use an incorrect syntax for redirecting the input or output of the tar command.
