Pegasystems Certified Pega Senior System Architect 23 認定 PEGACPSSA23V1 試験問題 (Q141-Q146):

質問 # 141

Which two methods allow you to identify the Pega Platform application type? (Choose Two)

- A. View the Application layers widget for the ruleset stack.
- B. View the portals used by the application.
- C. View the Application definition rule.
- D. View the Settings tab of the case designer.

正解: A、C

解説:

The application type can often be identified by viewing the Application layers widget for the ruleset stack, which gives an overview of how the application is structured, and by viewing the Application definition rule, which provides detailed information about the application's setup and its components. References: Pega Platform Help - Application Layers.

質問 # 142

The primary purpose of a production ruleset is to allow rules to be

- A. migrated to a production environment
- B. tested in a production environment
- C. reused in multiple production environments
- D. updated in a production environment

正解: D

解説:

The primary purpose of a production ruleset is to allow rules to be updated in a production environment.

Production rulesets are designed to hold rules that business users can modify directly in a production environment without requiring a deployment from development through testing environments. This enables quick changes to be made to decision tables, correspondence, and other rule types that business users are permitted to change. References: Pega official documentation on ruleset types.

質問 # 143

A city resident can report potholes to the Department of Transportation by logging in to a mobile Pega Platform application that utilizes the Pega API.

Which two Pega API interactions do you use to facilitate this? (Choose two.)

- A. Submit the report using POST/cases
- B. Update the report using GET/cases
- C. Log into the application using PUT/authenticate
- D. Access the related case type to report using GET/casetypes

正解: A、D

解説:

To report potholes through a mobile application using the Pega API, the POST/cases method would be used to submit the report case, and the GET/casetypes method would be used to access the related case type to ensure the correct case type is used for the report. Reference: Pega Platform API Guide.

質問 # 144

A class group is used to_____.

- A. assign work to a specific group of users
- B. combine related properties by usage
- C. associate child classes with a single database table
- D. identify a layer of the Enterprise Class Structure

正解: C

解説:

A class group is used to associate child classes with a single database table. This mechanism is known as class table inheritance,

where instances of different but related concrete classes that belong to the same class group are stored in the same database table.
References: Pega official documentation on class groups and class inheritance.

質問 # 145

Several development teams work on different enhancements. The release date for each enhancement is uncertain. Which two options, when performed together, allow each team to keep its work separate? (Choose Two)

- A. Create a new ruleset version for each team
- B. Set up a branch ruleset for each team
- C. Create a new application for each team
- D. Create a production ruleset for each team

正解: A、B

解説:

Creating a new ruleset version for each team ensures that each team's work is isolated within a specific version, preventing overlap and conflict. Setting up a branch ruleset for each team further isolates development work, allowing parallel development streams that can later be merged back into the main application ruleset. These two options, when used together, provide the most flexibility for teams working on separate enhancements with uncertain release dates. Reference: Pega Platform Help - Branch Rulesets.
