Yes, as a lot of our loyal customers who have passed the H12-841_V1.5 exam and got the certification said that more than the H12-841_V1.5 certification, they felt they had been benefited more for they had obtained the knowledge and apply it in the daily work, which can help them finish all tasks efficiently. Then they do not need to work overtime. It is necessary to learn our H12-841_V1.5 Guide materials if you want to own a bright career development.

We have 24/7 Service Online Support services, and provide professional staff Remote Assistance. Besides, if you need an invoice of our H12-841_V1.5 practice materials please specify the invoice information and send us an email. And you can download the trial of our H12-841_V1.5 training engine for free before your purchase. This kind of service shows our self-confidence and actual strength about H12-841_V1.5 Study Materials in our company. Besides, our company's website purchase process holds security guarantee, so you needn't be anxious about download and install our H12-841_V1.5 exam questions.

Huawei H12-841_V1.5 Exam | H12-841_V1.5 Valid Test Fee - Help you Pass

H12-841_V1.5 Exam for Sure

Huawei H12-841_V1.5 exam questions are the best because these are so realistic! It feels just like taking a real Huawei H12-841_V1.5 exam, but without the stress! Our Huawei H12-841_V1.5 Practice Test software is the answer if you want to score higher on your real Huawei H12-841_V1.5 certification exam and achieve your academic goals.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q261-Q266):

NEW QUESTION # 261

(Which of the following is not one of the three roles defined in policy association?)

- A. Access device
- **B. Portal server**
- C. Terminal
- D. Control device

Answer: B

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

Policy association is a core concept in Huawei campus network security design and is used to associate users, devices, and control elements for unified policy enforcement. According to HCIP Datacom Campus Network documentation, policy association defines three fixed roles: Terminal, Access device, and Control device.

The Terminal represents the end user or user device accessing the network. The Access device is typically a switch or wireless access device that provides network access and enforces authentication and authorization policies. The Control device, such as an authentication or policy control node, is responsible for policy decision-making and centralized management.

A Portal server is not a role within policy association. Instead, it is a service component that provides web-based authentication pages and user interaction during Portal authentication. While it participates in the overall authentication process, it does not belong to the policy association role model.

Therefore, among the given options, Portal server is not one of the three defined policy association roles. This makes option B the correct answer.

NEW QUESTION # 262

In a wide area network (WAN) IPv6 transition scenario, if "an enterprise needs to provide both IPv4 and IPv6 services to the outside world, but only deploys IPv4 internally," which of the following technologies should be adopted?

- A. IPv4/IPv6 dual-stack technology (internal devices must support IPv6)
- B. Disable IPv6 service and only provide IPv4 service.
- **C. NAT464 (translates external IPv6 addresses into internal IPv4 addresses, allowing direct access from external IPv4 addresses)**
- D. IPv6 over IPv4 tunnel (only allows access from IPv6 terminals)

Answer: C

NEW QUESTION # 263

(Based on the VXLAN tunnel creation mode, what are the different types of VXLAN tunnels?)

- A. Stateless VXLAN tunnel
- B. Stateful VXLAN tunnel
- **C. Dynamic VXLAN tunnel**
- **D. Static VXLAN tunnel**

Answer: C,D

Explanation:

In HCIP Datacom Campus Network VXLAN architecture, VXLAN tunnels are classified based on how the tunnel endpoints are

created and maintained, which is referred to as the VXLAN tunnel creation mode.

According to Huawei VXLAN design principles, there are two valid VXLAN tunnel types: static VXLAN tunnels and dynamic VXLAN tunnels.

A static VXLAN tunnel is manually configured by an administrator. In this mode, the source VTEP IP address, destination VTEP IP address, and related parameters are explicitly specified on devices. Static VXLAN tunnels are typically used in small-scale networks or test environments where the number of VTEPs is limited and network topology is simple. However, static configuration lacks scalability and flexibility, making it unsuitable for large campus fabrics.

A dynamic VXLAN tunnel is automatically created based on control-plane learning mechanisms, such as BGP EVPN. In this mode, VTEPs learn remote VTEP IP addresses dynamically through EVPN route advertisements (for example, Type 3 routes). When a remote VTEP becomes reachable at the underlay Layer

3 level, the VXLAN tunnel is automatically established without manual intervention. This mode is widely used in modern campus and data center networks due to its scalability and automation capabilities.

Options A and D are incorrect because stateless and stateful are not official VXLAN tunnel creation classifications in Huawei's VXLAN implementation. VXLAN itself is an encapsulation mechanism, and tunnel state is not categorized in this manner.

Therefore, the correct VXLAN tunnel types based on creation mode are static VXLAN tunnels and dynamic VXLAN tunnels.

NEW QUESTION # 264

In the WAN BGP protocol, if "EBGP neighbors are not configured with neighbor relationships and can only be reached through static routes", which of the following problems will this cause?

- A. Automatically discover EBGP neighbors and establish relationships
- B. BGP neighbor relationships cannot be established (neighbor IPs need to be manually configured).
- C. BGP neighbor relationships are established normally and routes can be passed.
- D. BGP neighbor relationships are established but routes cannot be passed.

Answer: B

NEW QUESTION # 265

In the WAN BGP protocol, which of the following attributes can be used to "transmit route priority to EBGP neighbors, with smaller values indicating higher priority"?

- A. Next Hop
- B. AS_PATH
- C. Local Preference
- D. MED Multi-Exit Discriminator

Answer: D

NEW QUESTION # 266

.....

Have you ever tried our IT exam certification software provided by our TorrentExam? If you have, you will use our H12-841_V1.5 exam software with no doubt. If not, your usage of our dump this time will make you treat our TorrentExam as the necessary choice to prepare for other IT certification exams later. Our H12-841_V1.5 Exam software is developed by our IT elite through analyzing real H12-841_V1.5 exam content for years, and there are three version including PDF version, online version and software version for you to choose.
