New 300-720 Exam Experience, Exam Dumps 300-720 Pdf

Our Cisco 300-720 exam training dumps will help you master the real test and prepare well for your exam. If you worry about your exam, our Cisco 300-720 Exam Training dumps will guide you and make you well preparing you will pass exam without any doubt. Our products are just suitable for you.

Cisco 300-720 Certification Exam is a valuable credential for IT professionals who want to advance their career in the field of email security. Securing Email with Cisco Email Security Appliance certification validates the candidate's expertise in securing email with Cisco Email Security Appliance and demonstrates their commitment to staying up-to-date with the latest email security technologies and best practices. Securing Email with Cisco Email Security Appliance certification also opens up new career opportunities for IT professionals in various industries, including healthcare, finance, government, and education.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q150-Q155):

NEW QUESTION # 150

An organization wants to use DMARC to improve its brand reputation by leveraging DNS records. Which two email authentication mechanisms are utilized during this process? (Choose two.)

- A. DSTP
- B. SPF
- C. DKIM
- D. PKI
- E. TLS

Answer: B,C

Explanation:

Reference:

<https://www.cisco.com/c/en/us/products/security/what-is-dmarc.html>

SPF (Sender Policy Framework) and DKIM (DomainKeys Identified Mail) are two email authentication mechanisms that are utilized during this process. SPF and DKIM allow the domain owner to publish DNS records that specify the authorized IP addresses or hosts for sending emails from that domain and sign the messages with a cryptographic key to prove their authenticity and integrity.

DMARC (Domain-based Message Authentication, Reporting and Conformance) is an email authentication standard that builds on SPF and DKIM and allows the domain owner to publish DNS records that specify how receivers should handle messages that fail SPF or DKIM verification, such as reject, quarantine, or none, and how to report back the results of DMARC validation.

The other options are not valid email authentication mechanisms that are utilized during this process, because they are not part of DMARC standard.

NEW QUESTION # 151

Which type of DNS record would contain the following line, which references the DKIM public key per RFC 6376?

v=DKIM1; p=76E629F05F709EF665853333EEC3F5ADE69A2362BEC406582670456943283BE

- A. AAAA
- B. CNAME
- **C. TXT**
- D. PTR

Answer: C

Explanation:

A TXT record is a type of DNS record that contains arbitrary text data that can be used for various purposes such as verification, configuration, or authentication. A TXT record can contain the DKIM public key per RFC 6376, which is used to verify the digital signature of an email message generated by the DKIM private key of the sender domain.

The other options are not valid because:

- * A. A CNAME record is a type of DNS record that maps an alias name to a canonical name or another alias name. It does not contain any DKIM public key information.
- * B. An AAAA record is a type of DNS record that maps a hostname to an IPv6 address. It does not contain any DKIM public key information.
- * D. A PTR record is a type of DNS record that maps an IP address to a hostname, which is the reverse of an A or AAAA record. It does not contain any DKIM public key information.

NEW QUESTION # 152

Refer to the exhibit. How should this configuration be modified to stop delivering Zero Day malware attacks?

- A. Change Unscannable Action from Deliver As Is to Quarantine.
- B. Configure mailbox auto-remediation.
- C. Apply Prepend on Modify Message Subject under Malware Attachments.
- **D. Change File Analysis Pending action from Deliver As Is to Quarantine.**

Answer: D

Explanation:

Overview of File Reputation Filtering and File Analysis:

Advanced Malware Protection protects against zero-day and targeted file-based threats in email attachments by:

-Obtaining the reputation of known files.

-Analyzing behavior of certain files that are not yet known to the reputation service.

-Continuously evaluating emerging threats as new information becomes available, and notifying you about files that are determined to be threats after they have entered your network.

-This feature is available for incoming messages and outgoing messages.

https://www.cisco.com/c/en/us/td/docs/security/esa/esa11-1/user_guide/b_ESA_Admin_Guide_11_1/b_ESA_Admin_Guide_chapter_010000.html?bookSearch=true

NEW QUESTION # 153

What is the order of virus scanning when multilayer antivirus scanning is configured?

- A. The McAfee engine scans for viruses first and the default engine scans for viruses second.
- B. The Sophos engine scans for viruses first and the McAfee engine scans for viruses second.
- C. The default engine scans for viruses first and the McAfee engine scans for viruses second.
- **D. The McAfee engine scans for viruses first and the Sophos engine scans for viruses second.**

Answer: D

Explanation:

https://www.cisco.com/c/en/us/td/docs/security/esa/esa12-0/user_guide/b_ESA_Admin_Guide_12_0/b_ESA_Admin_Guide_chapter_01011.html

According to the User Guide for AsyncOS 12.0 for Cisco Email Security Appliances 2 , the order of virus scanning when multilayer antivirus scanning is configured is as follows:

- * The McAfee engine scans the message first. If the McAfee engine detects a virus, the message is dropped or repaired, depending on the configuration. If the McAfee engine does not detect a virus, the message is passed to the next layer of scanning.
- * The Sophos engine scans the message second. If the Sophos engine detects a virus, the message is dropped or repaired, depending on the configuration. If the Sophos engine does not detect a virus, the message is delivered to the recipient.

NEW QUESTION # 154

Which component must be added to the content filter to trigger on failed SPF Verification or DKIM Authentication verdicts?

- **A. condition**
- B. parameter
- C. status
- D. response

Answer: A
