provides for 4 SSIDs in each band with three secure SSIDs and one Open System SSID. The network runs only 802.11ac APs and uses 20 MHz channels in 2.4 GHz and 400 MHz channels in 5 GHz. What can you do to reduce the impact of beacon frames on CCI and channel utilization?

- A. Increase the beacon interval
- B. Use the same security across all SSIDs
- C. Disable SSID broadcasting
- D. Use only 40 MHz channels

Answer: C

NEW QUESTION # 63

Given: Protocol analyzer often have useful graphical dashboards providing information about the health and operations of the WLAN.

- A. Locating overloaded APs
- B. Evaluating the capacity handling on a specific channel
- C. Discovering the total number of client STAs on your network
- D. Ensuring compliance with corporate security policies

Answer: A

NEW QUESTION # 64

You have received reports of performance problems in a BSS. One specific user is indicating that her downloads are taking a very long time compared to other users around her. You want to determine if the AP is sending frames multiple times to get through to the user's computer.

Where should you monitor with the protocol analyzer to see retries from the AP in this scenario?

- A. Directly in the middle of the AP and client STA
- B. Very near the client STA
- C. Very near the AP
- D. Capture from another AP in another BSS

Answer: C

NEW QUESTION # 65

You are troubleshooting problems with DHCP in relation to lightweight APs. The vendor class identifier (VCI) is not specified in the DHCP server. When you contact vendor support, they inform you that it is not necessary.

When is this information true?

- A. When the DHCP server is directly connected to the subnet
- B. When only one client option 60 value is required
- C. When only one AP exists on the subnet
- D. When only one client option 43 value is required

Answer: D

Explanation:

The DHCP server should be configured to provide the IP address information to the APs, but it may also be required to pass information for option 43. Option 43 is a vendor information option and can be used for any vendor purpose. The vendor class identifier (VCI) (for example, "Cisco AP c3600") is used with option 60 to determine the appropriate information to return with option 43.

NEW QUESTION # 66

When using a commercial WLAN protocol analyzer, you notice that it is listing vendor names for some APs and client STAs.

What is the source of this information?

- A. DNS name resolution
