## Huawei HCIA-Cloud Computing V5.5 Sample Questions (Q91-Q96):

### NEW QUESTION # 91

A virtual machine is composed of configuration files and disk files. Each disk of the virtual machine corresponds to a disk file, which is used to save user data.

- A. True
- B. False

**Answer: A**

### NEW QUESTION # 92

Which of the following statements is false about the development of cloud computing architecture?

- A. In terms of cloud platforms and cloud management software, it has evolved from closed-source and closed architecture to open-source and open architecture.
- B. It has evolved from small-scale resource virtualization and integration to large-scale resource pool construction.
- C. It has evolved from non-critical IT applications to critical enterprise applications.
- D. It has evolved from unstructured or semi-structured data to structured data.

**Answer: D**

Explanation:

According to the HCIA-Cloud Computing curriculum, the evolution of cloud computing architecture reflects changes in technology openness, business importance, resource scale, and data characteristics.

Option A is correct because early cloud platforms were often proprietary and closed, while modern cloud computing architectures increasingly adopt open-source technologies (such as OpenStack and Kubernetes) and open architectures to improve interoperability and innovation.

Option B is also correct. Cloud computing initially hosted non-critical workloads such as testing, development, and backup systems. As reliability, security, and availability improved, cloud platforms became capable of supporting mission-critical enterprise applications, including ERP, financial systems, and core business services.

Option D correctly describes the evolution of cloud architecture. Early virtualization focused on small-scale resource integration, while modern cloud computing emphasizes large-scale resource pools, enabling centralized management, elastic scheduling, and efficient utilization of massive compute, storage, and network resources.

Option C is false. The evolution of cloud computing data has moved from structured data to semi-structured and unstructured data, not the other way around. With the rise of big data, IoT, social media, logs, images, and videos, cloud platforms are increasingly designed to process massive volumes of unstructured and semi-structured data, which is a key trend emphasized in HCIA learning materials.

### NEW QUESTION # 93

The virtual machine snapshot failed to be created online, which may be caused by operating the virtual machine when creating the snapshot.

- A. True
- B. False

**Answer: A**

#### NEW QUESTION # 94

In a server with RISC instruction set architecture, the () instruction is a special instruction for virtualization, which means that the privileged instructions in the Guest os that originally need to run in Ring0 mode are deprived of their privileges and handed over to the VMM for execution.
