Which section contains the subpattern configuration that determines how many matching events are needed to trigger the rule?

- A. Filters
- B. Aggregate
- C. Group By
- D. Actions

**Answer: B**

Explanation:

The Aggregate section contains the condition COUNT(Matched Events) >= 1, which defines how many events must match the filter criteria for the rule to trigger. This is the subpattern configuration that determines the event threshold.

### NEW QUESTION # 55

Refer to the exhibit. What is the Group: VPN Gateway value referring to?

Filter By:  Event Keywords  Event Attribute  CMDB Attribute

Paren	Attribute	Operator	Value	Paren	Next	Row

The value Group: VPN Gateway refers to a CMDB device group in FortiSIEM. This group represents a collection of devices categorized as VPN Gateways in the Configuration Management Database. By filtering with this group, the query retrieves events where the Source IP matches any device included in the CMDB group "VPN Gateway."

#### NEW QUESTION # 56

Which two data areas can you use for user and entity behavior analytics (UEBA) machine learning models? (Choose two.)

- A. location
- B. network
- C. resources
- D. process

**Answer: A,B**

Explanation:

FortiSIEM's UEBA models analyze user and entity behavior by correlating data such as location (for detecting unusual logins or access patterns) and network activity (for identifying abnormal communication or traffic behaviors). These data areas enable the system to build baseline profiles and detect anomalies indicating potential insider threats or compromised accounts.

#### NEW QUESTION # 57

Which running mode takes the most time to perform machine learning tasks?

- A. Regression
- B. Local auto
- C. Forecasting
- D. Local

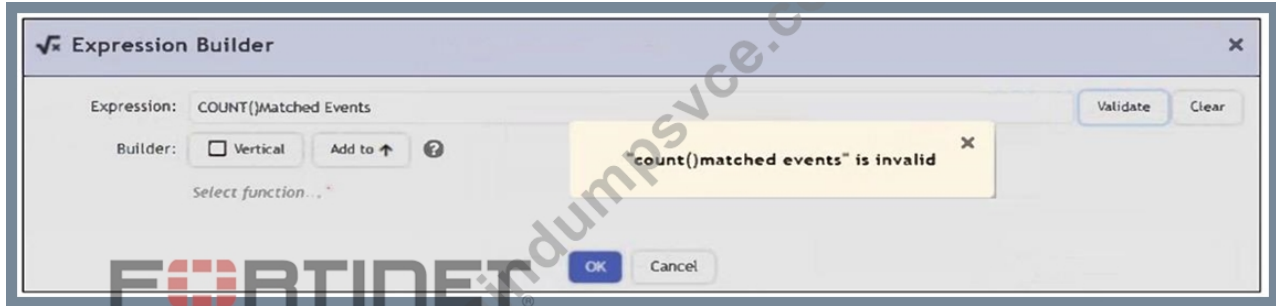

**Answer: D**

Explanation:

In Local mode, FortiSIEM performs machine learning tasks using the full dataset without optimization shortcuts, making it the most time-consuming mode compared to Local Auto, Forecasting, or Regression.

### NEW QUESTION # 58

Refer to the exhibit.

An analyst is trying to identify an issue using an expression based on the Expression Builder settings shown in the exhibit; however, the error message shown in the exhibit indicates that the expression is invalid.

What is the correct syntax to create an expression that generates a total count of matched events?

- A. Matched Events COUNT()
- B. Matched Events (COUNT)
- C. (COUNT) Matched Events
- D. COUNT(Matched Events)

**Answer: D**

Explanation:

The correct syntax is COUNT(Matched Events) - with proper capitalization and spacing - to generate a total count of matched events. The error in the exhibit likely stems from a formatting issue (e.g., lowercase count() or incorrect spacing), not the logical structure of the expression.
