NEW QUESTION # 63

When configuring dual encryption, which key management method is supported?

- A. Lockdown Mode Enabled
- B. Native Key Manager
- C. Trusted Platform Module
- **D. External Key Manager**

Answer: D

Explanation:

When configuring dual encryption in Nutanix, an External Key Manager (EKM) is required. This allows the cluster to use an external hardware-based or software-based key management system to securely store and manage encryption keys. The combination of external and native encryption ensures compliance with high security standards.

- * A. Trusted Platform Module: Incorrect, as TPM is not used for managing dual encryption keys.
- * B. External Key Manager: Correct, as dual encryption relies on an external system to manage keys.
- * C. Native Key Manager: Incorrect, as native key management alone does not support dual encryption.
- * D. Lockdown Mode Enabled: Incorrect, as Lockdown Mode relates to cluster security, not encryption key management.

NEW QUESTION # 64

What is the purpose of the OpLog?

- A. Dynamic read cache
- B. Persistent data storage
- C. Global metadata
- **D. Persistent write buffer**

Answer: D

Explanation:

The OpLog (Operational Log) in Nutanix serves as a persistent write buffer for incoming I/O operations. It temporarily stores write requests to ensure fast acknowledgment to clients and better performance. The data is later coalesced and written to the Extent Store for long-term storage.

- * A. Persistent write buffer: Correct, as the OpLog optimizes write performance by buffering writes temporarily.
- * B. Persistent data storage: Incorrect, as this describes the Extent Store, not the OpLog.
- * C. Global metadata: Incorrect, as metadata operations are handled by the Metadata Store.
- * D. Dynamic read cache: Incorrect, as read caching is managed separately, often involving SSD-based caches.
