Interactive Sharing-and-Visibility-Architect Questions: Salesforce Certified Sharing and Visibility Architect

The Sharing-and-Visibility-Architect examination time is approaching. Faced with a lot of learning content, you may be confused and do not know where to start. Sharing-and-Visibility-Architect test preps simplify the complex concepts and add examples, simulations, and diagrams to explain anything that may be difficult to understand. You can more easily master and simplify important test sites with Sharing-and-Visibility-Architect learn torrent. In addition, please be assured that we will stand firmly by every warrior who will pass the exam.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q70-Q75):

NEW QUESTION # 70
Universal Containers has two custom objects: Job and Job Interview. The Job Interview object has a lookup relationship to Job. Both objects are set to Private in sharing settings. The HR team will own all Job and Job Interview records. They have asked their Salesforce Architect to automatically share the Job Interview when the Interviewer (lookup to user record) has been populated. The interviewer can be from any department. What method should the Architect use to achieve this requirement?

- A. Build a standard sharing rule between Job Interview and the Interviewer
- B. Build apex Managed Sharing code to share Job Interview with the Interviewer user
- C. Build a criteria-based sharing rule between the Job Interview and the Interviewer
- D. Build a workflow email notification to notify the interviewer of the record assignment

Answer: B

Explanation:
Explanation
According to this source, Apex managed sharing is the best way to share records based on complex logic that can't be handled by declarative sharing. In this case, the architect can use Apex code to create a trigger on the Job Interview object that will create a share record for the interviewer user when the lookup field is populated.
The other options are not feasible or scalable.

NEW QUESTION # 71
Universal Containers implemented Sales Cloud and requested that only certain branch staff trained to sell high-risk products can create opportunities for high-risk products.
How should an architect allow only specific branch staff to sell high-risk products?

- A. Set the price book OWD to View Only and share the (High Risk) price book with the trained staff via manual sharing.
- B. Set the price book OWD to View Only and share the (High Risk) price book with the trained staff via a sharing rule.
- C. Set the price book organization-wide default (OWD) to View Only and share the price book (High Risk) with the trained staff.

Answer: B

Explanation:
To ensure only specific branch staff can create opportunities for high-risk products, set the Price Book OWD to View Only to limit access. Then, use a sharing rule to share the high-risk price book with the trained staff.
This approach ensures:
* Untrained users cannot see or use the price book.
* Trained staff have explicit access through the sharing rule.
* Option A: Manual sharing is inefficient for a large group and less manageable than sharing rules.
* Option C: While technically correct, sharing rule implementation is clearer and more scalable for this use case.

* Price Book Sharing Model

NEW QUESTION # 72
Universal Containers (UC) has a requirement to expose a web service to their business partners. The web service will be used to

allow each business partner to query UC's Salesforce instance to retrieve the status of orders. The business partner should only be allowed access to orders for which the business partner is the fulfillment vendor. The Architect does not want the business partners to utilize the standard APIs and would prefer a custom API be developed. Which three design elements should the Architect consider in order to ensure the data security of the solution?

Choose 3 answers

- A. Develop a custom Apex web service using the "With Sharing" keyword.
- B. Provide each partner with their own Salesforce login set to API Enabled on the profile.
- C. Set the Orders object's sharing settings to Private in the Org-Wide Defaults
- D. Query the Orders object with Dynamic SOQL based upon the fulfillment ID.
- E. Develop a custom Apex web service with a fulfillment ID input attribute

Answer: A,C,D

NEW QUESTION # 73

How should the Architect ensure that OBJECT-LEVEL SECURITY is enforce within a custom Visualforce application that was a standard Apex controller on the Lead object?

- A. Use the {!$ObjectType.lead.accessible} expression within the Visualforce page.
- B. Use the Schema.DescribeSObjectResultisAccessible() method in the Apex controller.
- C. Use the runAs() method to enforce user permissions in the Apex controller.
- D. Use the "With Sharing" keyword when defining the Visualforce page.

Answer: A

Explanation:
Explanation
Using the {!$ObjectType.lead.accessible} expression within the Visualforce page is the best way to ensure that object-level security is enforced within a custom Visualforce application that uses a standard Apex controller on the Lead object. This expression evaluates to true if the user has read access to the Lead object, and false otherwise. The Visualforce page can use this expression to conditionally render components based on the user's permissions. Option A is incorrect, as the runAs() method is only available in test methods and does not change the user's permissions. Option B is incorrect, as the Schema.DescribeSObjectResultisAccessible() method returns true if the user has any access (read, create, edit, or delete) to the object, not just read access. Option D is incorrect, as using the "With Sharing" keyword when defining the Visualforce page does not affect object-level security, but record-level security.

NEW QUESTION # 74

Universal Containers (UC) has 600 sales reps. UC has rollout plan to deploy salesforce in 3 weeks. At the end of the second week, they received a "User Role Limit Exceeded" error.
After investigation, they discovered that during the user provisioning process, a new role was generated for every new user.
Which two recommendations could solve this problem?
Choose 2 answers.

- A. Contact salesforce support and request to increase the number of users' roles allowed.
- B. Remove role hierarchy from salesforce org and control the record access using apex managed sharing.
- C. Create an Apex class to replace the User Roles by generic one as soon as they are created.
- D. Review the user provisioning process to not automatically create a user role for any new user.

Answer: A,D

NEW QUESTION # 75

......

You can choose the version for yourself which is most suitable, and all the Sharing-and-Visibility-Architect training materials of our company can be found in the three versions, This Salesforce Certified Sharing and Visibility Architecte Exam demo product will help you to get acquainted with software interface and usability of Sharing-and-Visibility-Architect practice exam, Learning our Sharing-and-Visibility-Architect test practice materials can help them save the time and focus their attentions on their major things, For candidates who want to get the certificate of the exam, choosing a proper Sharing-and-Visibility-Architect learning material is important.

Many valuable things are, Page coordinates may Sharing-and-Visibility-Architect or may not be the same as world coordinates, depending on the transformation, You can choosethe version for yourself which is most suitable, and all the Sharing-and-Visibility-Architect Training Materials of our company can be found in the three versions.
