## NCP-US exam study material & NCP-US exam training pdf & NCP-US latest practice questions

Pass4sureCert helps you in doing self-assessment so that you reduce your chances of failure in the examination of Nutanix Certified Professional - Unified Storage v6.5 (NCP-US) certification. Similarly, this desktop NCP-US practice exam software of Pass4sureCert is compatible with all Windows-based computers. You need no internet connection for it to function. The Internet is

only required at the time of product license validation.

## Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q33-Q38):

### NEW QUESTION # 33

An administrator has performed an AOS upgrade, but noticed that the compression on containers is not happening. What is the delay before compression begins on the Files container?

- A. 12 hours
- B. 60 minutes
- C. 24 hours
- D. 30 minutes

**Answer: B**

### NEW QUESTION # 34

Question : Deploying Files instances requires which two minimum resources? (Choose two.) Options: (Choose two.)

Options:

- A. 8 vCPUs per host
- B. 4 vCPUs per host
- C. 12 GiB of memory per host
- D. 8 GiB of memory per host

**Answer: B,C**

### NEW QUESTION # 35

An administrator wants to use Smart DR to ensure that in the event of an unplanned loss of service, users are redirected automatically to the recovery site. What can satisfy this requirement?

- A. Configure AD and DNS access for seamless client failover.
- B. Register Nutanix Files with the same PC.
- C. Register PE clusters to PC before enabling the Files Manager.
- D. Configure Protection Policy replication schedule.

**Answer: A**

### NEW QUESTION # 36

An administrator wants to utilize File Analytics to send anomaly alerts and data to email recipients. Which statement describes when File Analytics will send the emails?

- A. Every 15 minutes.
- B. As defined in the Anomaly Rules.
- C. When a minimum of anomalies are detected.
- D. Whenever an anomaly is detected.

**Answer: B**

### NEW QUESTION # 37

A developer has finished developing a new eCommerce site that is broken out into several different Kubernetes pods. In order to promote the new application to production, a storage location for static content that the site uses needs to be defined in the file.

Application requirements:

WORM

## Replication

Which solution should the administrator choose?

- A. Volumes
- B. Files with NFS
- C. Files with SMB
- D. Objects

### Answer: D

Explanation:

Object storage is a good fit for applications that require versioning, replication, and a write-once-read-many (WORM) access model. Since eCommerce sites often store a large amount of unstructured data such as images, videos, and other multimedia content, object storage can provide a scalable, cost-effective, and highly available solution.

Object storage is also a good fit for Kubernetes-based applications that use microservices architecture, as objects can be accessed from multiple pods at the same time, without the need for complex file system sharing. Additionally, object storage can be easily integrated with Kubernetes using operators or API calls.

On the other hand, while volumes and file storage solutions such as SMB and NFS can also store static content, they may not be the best fit for the given application requirements. Volumes are often limited in terms of scalability and replication, while file storage solutions may not provide the same level of versioning and WORM capabilities as object storage.

As a result, the best solution for the given application requirements is Object storage.

Note that the exact implementation and configuration of the object storage solution may vary based on factors such as performance, availability, and security requirements.
