## Useful and reliable NETA\_2 training dumps & high-quality NETA NETA\_2 training material

There is always a fear of losing NETA\_2 exam and this causes you loss of money and waste time. There is no such scene with ITPassLeader. Your money and exam attempt is bound to award you a sure and definite success with 100% money back guarantee. You can claim for the refund of money if you do not succeed and achieve your target. NETA\_2 Exam Materials will ensure you that you will be paid back in full without any deduction. For consolidation of your learning, our NETA Level 2 Certified Assistant Electrical Testing Specialist dumps also provide you sets of practice questions and answers. Doing them again and again, you enrich your knowledge and maximize chances of an outstanding NETA\_2 exam success.

## NETA Level 2 Certified Assistant Electrical Testing Specialist Sample Questions (Q98-Q103):

### NEW QUESTION # 98

In which three-phase configuration are line current and phase current equal?

- A. Open-delta
- B. Delta
- C. Corner-grounded delta
- D. Wye

**Answer: D**

Explanation:

In a wye (star) connection, line current equals phase current. In delta systems, line current is  $\sqrt{3}$  times phase current. NETA Level 2 technicians must recognize this distinction when interpreting ammeter readings, evaluating load balance, and performing commissioning tests on three-phase systems.

#### NEW QUESTION # 99

Cells are connected in series in order to increase:

- A. Power output
- **B. Voltage rating**
- C. Current capacity
- D. Internal resistance stability

**Answer: B**

Explanation:

When electrical cells are connected in series, their individual voltages add together, increasing the overall voltage rating of the battery string. Current capacity remains the same as that of a single cell.

NETA Level 2 technicians frequently encounter battery banks used for control power, protective relays, and emergency systems.

Understanding series versus parallel connections is essential when testing battery voltage, interpreting readings, and diagnosing capacity or voltage issues during commissioning and maintenance.

#### NEW QUESTION # 100

A transformer contains insulating fluid with a specific gravity greater than 1. From where should the oil sample be drawn?

- A. From the conservator
- **B. From the top of the tank**
- C. From the bottom of the tank
- D. From the middle of the tank

**Answer: B**

Explanation:

Specific gravity greater than 1 means the insulating fluid is heavier than water. Any free water contamination will settle below the oil. To avoid collecting settled contaminants and to obtain a representative oil sample, NETA practice requires sampling from the top of the tank.

Correct sampling technique is critical for accurate dielectric, moisture, and dissolved gas analysis results.

NETA Level 2 technicians must understand fluid properties to avoid misleading test conclusions.

#### NEW QUESTION # 101

How many connection points are typically found on a Kelvin bridge used for low-resistance measurements?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

A Kelvin bridge, also known as a four-wire resistance measurement device, uses four connection points to accurately measure very low resistances. These consist of two current terminals and two potential (voltage) terminals.

This configuration eliminates the effects of lead resistance and contact resistance, which can significantly distort measurements when testing bolted connections, bus joints, and grounding conductors. NETA Level 2 technicians routinely use Kelvin methods when performing low-resistance ohmic measurements during acceptance and maintenance testing.

Using fewer than four terminals would result in inaccurate readings, especially at milliohm or micro-ohm levels. Understanding this principle ensures proper test setup and reliable data interpretation.

#### NEW QUESTION # 102

When personnel are working in a permitted confined space, how many attendants must remain outside the space and for how long?

- A. One attendant, for the duration of the operation
- B. Two attendants, during energized work
- C. One attendant, during entry only
- D. Two attendants, until entry permit expires

**Answer: A**

Explanation:

Confined space safety requirements mandate that at least one trained attendant remain outside the space for the entire duration of the entry operation. The attendant monitors conditions, maintains communication, and initiates rescue procedures if needed. NETA Level 2 technicians must comply with confined space protocols when testing transformers, vaults, or enclosed switchgear compartments.

## NEW QUESTION # 103

.....

The NETA\_2 Mock Exams not just give you a chance to self-access before you actually sit for the certification exam, but also help you get an idea of the NETA exam structure. It is well known that students who do a mock version of an exam benefit from it immensely. Some NETA certified experts even say that it can be a more beneficial way to prepare for the NETA Level 2 Certified Assistant Electrical Testing Specialist exam than spending the same amount of time studying.
