PEGACPSSA23V1 Exam Actual Questions, PEGACPSSA23V1 Exam Study Guide

Your success is guaranteed if you choose our PEGACPSSA23V1 training guide to prepare for your coming exam! The questions and answers format of our PEGACPSSA23V1 exam braindumps is rich with the most accurate information and knowledge which are collected by our professional experts who have been in this career for over ten years. What is more, our PEGACPSSA23V1 Study Guide also provides you the latest simulating exam to enhance your exam skills. So with our PEGACPSSA23V1 learning questions, your success is guaranteed!

Pegasystems PEGACPSSA23V1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Reporting: Reporting involves designing reports with multiple data sources, including associations and joins.
Topic 2	<ul style="list-style-type: none">• Performance: Performance measurement and system debugging are covered here. This topic also includes reviewing log files to distinguish system and performance events.

Topic 3	<ul style="list-style-type: none"> • Application Development: This topic covers the creation and structure of enterprise-class applications. It includes understanding rule resolution, circumstancing, and the use of the New Application wizard.
Topic 4	<ul style="list-style-type: none"> • User Experience: Creating and authenticating Pega Web Mashups is the focus of this brief topic.
Topic 5	<ul style="list-style-type: none"> • Mobile: This topic differentiates between mobile delivery options and designs applications for mobile use, including certificate sets.

Pegasystems Certified Pega Senior System Architect 23 Sample Questions (Q15-Q20):

NEW QUESTION # 15

Drag each security solution on the left to its appropriate use case.

Answer:

Explanation:

□ Explanation:

Graphical user interface Description automatically generated

□ To match the security solutions to their appropriate use cases:

* "Access of Role to Object" is typically used to specify what actions a particular role can perform on instances of a class. It would be appropriate for a use case where "Dealers can modify evaluations" since this is an action that a specific role (dealers) would be allowed to perform.

* "Access Control Policy" allows defining rules that enforce property and case access restrictions based on the user role and other conditions. It would be appropriate for a use case where "Customers can only view their own credit report" since this would be a restriction based on user-specific data.

* "Access Deny" is used to explicitly deny access to a rule or data instance. It fits the use case where "Dealers cannot run reports" because it is a restriction that prevents a specific action (running reports) for a specific role (dealers).

* "Access when" is a rule that defines conditions for whether certain access is allowed. It would be used in the scenario where "Dealers cannot modify orders in the Fulfillment stage" since this is a conditional restriction based on the stage of the process.

Based on these explanations, here is the matched list:

* Access when -> Dealers cannot modify orders in the Fulfillment stage.

* Access Control Policy -> Customers can only view their own credit report.

* Access Deny -> Dealers cannot run reports.

* Access of Role to Object -> Dealers can modify evaluations.

NEW QUESTION # 16

Which two statements are valid about configuring Pega Web Mashup? (Choose Two)

- A. Only create one DIV element in the hosting web page for each Pega gadget.
- B. Keep the original names of default actions in the mashup code to prevent security risks.
- C. Use the Integration wizard to generate mashup code for use in other systems.
- D. Add a list of trusted domains in your applications in which you want to use the mashup.

Answer: A,D

Explanation:

When configuring Pega Web Mashup, it's essential to create one DIV element in the hosting web page for each Pega gadget (A), ensuring that each gadget is properly isolated and rendered within its designated area on the web page. Additionally, adding a list of trusted domains in your application settings (B) is crucial for security, as it specifies which domains are authorized to host the mashup, preventing unauthorized use or embedding of the Pega functionalities in untrusted environments. Reference: Pega Community documentation on Pega Web Mashup configuration and security best practices.

NEW QUESTION # 17

In which scenario would a Declare OnChange rule be appropriate?

- A. When a developer changes a view, the change is checked into a development branch.
- **B. When a manager approves a case, the case is routed back to the appropriate case worker.**
- C. When a user updates their address, the active case is suspended until the address can be confirmed.
- D. During a nightly backup process, only updated fields are backed up.

Answer: B

Explanation:

A Declare OnChange rule is appropriate in a scenario where an immediate automatic response is required to a property change. For instance, when a manager approves a case (D), the case is routed back to the appropriate case worker. The OnChange rule can detect the approval and automatically perform the routing. References:

Pega official documentation on Declare OnChange rules.

NEW QUESTION # 18

Drag the name of the Pega Platform log file appender from the left to the matching use case on the right.

Answer:

Explanation:

□

NEW QUESTION # 19

Which three options do you consider when deciding to use post-processing actions on a flow action? (Choose Three)

- **A. The timing of the commit for the flow action**
- B. The potential reuse of the flow action
- **C. The effect if the flow action is reloaded**
- **D. The sequence in which the system runs different actions**
- E. The security setting for the flow action

Answer: A,C,D

Explanation:

When considering post-processing actions on a flow action, it's crucial to understand their implications on the user experience and system behavior. The effect if the flow action is reloaded (A) is important because post-processing actions might not execute again, leading to inconsistent data or user experience. The sequence in which the system runs different actions (B) is critical to ensure that data transformations and business logic are applied in the correct order, maintaining data integrity and consistency. The timing of the commit for the flow action (C) influences transaction management, ensuring that all changes are saved correctly and that the system maintains data consistency, especially in multi-user environments. References: Pega Community documentation on flow actions and post-processing.

NEW QUESTION # 20

.....

Similarly, TestValid offers up to 1 year of free Pegasystems PEGACPSSA23V1 exam questions updates if in any case, the content of Certified Pega Senior System Architect 23 (PEGACPSSA23V1) certification test changes. TestValid provides its product in three main formats i.e., Pegasystems PEGACPSSA23V1 Dumps PDF, Web-Based Certified Pega Senior System Architect 23 (PEGACPSSA23V1) Practice Test, and Desktop PEGACPSSA23V1 Practice Exam Software.
