## Mule-Dev-202 Study Center - Mule-Dev-202 Latest Exam Questions

The Salesforce Mule-Dev-202 certification exam is a valuable credential that often comes with certain personal and professional benefits. For many Salesforce professionals, the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) certification exam is not just a valuable way to boost their skills but also Salesforce Certified MuleSoft Hyperautomation Developer certification exam gives them an edge in the job market or the corporate ladder. There are other several advantages that successful Salesforce Mule-Dev-202 Exam candidates can gain after passing the Salesforce Mule-Dev-202 exam.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q11-Q16):

### NEW QUESTION # 11

AnyAirlines needs to select a tool for developing an integration between Salesforce and an ERP system in the cloud. The requirements state that the systems must communicate bidirectionally and as close to real time as possible. The ERP system can be accessed via a SOAP-based web service.

Which tool meets the requirements of this integration?

- A. Orchestrator
- B. **Anypoint Studio**
- C. MuleSoft RPA
- D. MuleSoft Composer

### Answer: B

Explanation:

Anypoint Studio is the most suitable tool for developing an integration between Salesforce and an ERP system in the cloud, especially when bidirectional communication in near real-time is required. Here's why:

SOAP-Based Web Services Support:

Anypoint Studio supports SOAP-based web services, which is essential since the ERP system can be accessed via SOAP.

Bidirectional Communication:

Anypoint Studio allows for complex integrations that require bidirectional communication. You can set up flows that handle both inbound and outbound data seamlessly.

Real-Time Integration:

With Anypoint Studio, you can design integrations that process data in near real-time, ensuring timely updates between Salesforce and the ERP system.

Advanced Integration Capabilities:

Anypoint Studio offers advanced capabilities for data transformation, error handling, and connecting various systems, making it ideal for complex integration scenarios.

### NEW QUESTION # 12

AnyAirlines is developing an RPA process and is implementing testing best practices. They want to take the RPA process through rigorous testing.

During these tests, where do RPA process test plans execute?

- A. In RPA Manager
- B. **On a configured RPA Bot**
- C. In an RPA process runtime
- D. In RPA Builder

### Answer: B

Explanation:

During testing of an RPA process, test plans are executed on a configured RPA Bot. This allows you to simulate real-world scenarios and ensure the RPA process works correctly under various conditions:

On a Configured RPA Bot:

RPA Bots are configured to execute the automated tasks defined in the RPA process. By running test plans on these bots, you can verify the functionality and performance of the RPA process.

This approach ensures that the RPA process is thoroughly tested in an environment that closely mirrors production conditions.

### NEW QUESTION # 13

A Salesforce flow needs to connect to external APIs provided by Northern Trail Outfitters (NTO) and AnyAirlines to retrieve data. Which three steps should be taken to connect to the external APIs? (Choose three.)

- A. Create External Services in Salesforce for NTO and AnyAirlines.
- B. Create Named Credentials in Salesforce for NTO and AnyAirlines.
- C. Use an Action element to call and consume the appropriate API in the Salesforce flow.
- D. Create Named Credentials in Anypoint for NTO and AnyAirlines.
- E. Use a Virtual service to call and consume the appropriate API in the Salesforce flow.

**Answer: A,B,C**

Explanation:

To connect a Salesforce flow to external APIs, follow these steps:

Create Named Credentials in Salesforce:

Named Credentials in Salesforce simplify the authentication process by storing the URL and authentication details needed to call the external service. Set up Named Credentials for both NTO and AnyAirlines APIs.

Navigate to Salesforce Setup > Named Credentials > New Named Credential.

Enter the details for NTO API, including the endpoint URL and authentication settings.

Repeat the process for the AnyAirlines API.

Create External Services in Salesforce:

External Services allow you to register the external APIs with Salesforce so that they can be invoked from a flow.

Navigate to Salesforce Setup > External Services > New External Service.

Use the OpenAPI/Swagger or RAML specification files provided by NTO and AnyAirlines to register their APIs.

This step involves importing the API specifications and configuring the services, which will be used in the flow.

Use an Action Element in Salesforce Flow:

Within Salesforce Flow, use the Action element to call the external services that were registered.

This involves adding an Action to your flow and selecting the appropriate External Service action that corresponds to the API method you want to invoke.

#### NEW QUESTION # 14

Northern Trail Outfitters is concerned about security in their Salesforce org regarding their newly created hyperautomation flow that calls a MuleSoft API. A mechanism needs to be implemented that restricts which users can invoke the flow.

Which setting is available to a hyperautomation practitioner that meets this security requirement?

- A. Assign an appropriate profile or permission set to users in the external service.
- B. **Assign an appropriate profile or permission set to users in the connected app.**
- C. Configure OAuth 2.0 in the connected app.
- D. Configure OAuth 2.0 in the external service.

**Answer: B**

Explanation:

Profiles and Permission Sets: Assigning the appropriate profile or permission set to users in the connected app restricts access to the MuleSoft API. This method ensures that only authorized users can invoke the hyperautomation flow.

Reference:[Salesforce Connected App Security](#)

OAuth 2.0 Configuration: Configuring OAuth 2.0 is important for authentication, but it does not directly control which users can invoke the flow. The profile or permission set is used to manage user permissions.

Reference:[OAuth 2.0 Overview](#)

External Service Permissions: Assigning permissions in the external service is less relevant than managing permissions within Salesforce, where the flow is executed.

Reference:[External Services in Salesforce](#)

Connected App Security: Properly securing the connected app by configuring user profiles and permission sets ensures compliance with security policies and restricts access as required.

Reference:[Managing Access with Connected Apps](#)

#### NEW QUESTION # 15

Any Airlines is developing a new integration and wants built-in automated testing.

Which tool must be used to satisfy this requirement?

- A. Flow Orchestration
- B. MuleSoft RPA
- **C. Anypoint Platform**
- D. MuleSoft Composer

**Answer: C**

Explanation:

To implement built-in automated testing for new integrations at Any Airlines, the Anypoint Platform is the appropriate tool.

Anypoint Platform Capabilities:

Automated Testing: Anypoint Platform includes various tools such as MUnit for automated testing of Mule applications. MUnit allows developers to create, design, and run tests natively within Anypoint Studio.

Test Automation Features: It supports comprehensive testing features including unit tests, integration tests, and mock services to ensure robust and reliable integrations.

Continuous Integration and Deployment: Anypoint Platform can be integrated with CI/CD pipelines, allowing automated tests to run as part of the deployment process, ensuring that any new code changes do not break existing functionality.

Why Not Other Options:

MuleSoft RPA: Primarily used for automating repetitive manual tasks, not for testing integrations.

MuleSoft Composer: Focuses on low-code integrations and automation, not specifically designed for automated testing.

Flow Orchestration: While useful for process automation within Salesforce, it does not provide the testing capabilities required for MuleSoft integrations.

References:

For detailed information on automated testing with Anypoint Platform and MUnit, refer to the official MuleSoft documentation

## NEW QUESTION # 16

.....

As you can see on our website, there are versions of the PDF, Software and APP online. PDF version of our Mule-Dev-202 study materials- it is legible to read and remember, and support customers' printing request. Software version of our Mule-Dev-202 exam questions- It support simulation test system and times of setup has no restriction. Remember this version support Windows system users only. App online version of Mule-Dev-202 Practice Engine - Be suitable to all kinds of equipment or digital devices.
