SAFe-RTE Valid Test Registration, Exam SAFe-RTE Simulator

Compared with those practice materials which are to no avail and full of hot air, our SAFe-RTE guide tests outshine them in every aspect. If you make your decision of them, you are ready to be thrilled with the desirable results from now on. All exam candidates are awfully sure of our SAFe-RTE practice materials and when they meet other needs of the exam, they would rather be our regular buyers. We are sure of anyone who wants to pass the exam as well as our SAFe-RTE question materials. We will continue making our sublime materials more useful by keeping adding useful knowledge of this exam into them.

The SAFe-RTE Exam is designed to test the knowledge and skills of individuals who want to become certified RTEs. SAFe-RTE exam covers a wide range of topics, including SAFe principles and practices, agile development, lean product development, and DevOps. It assesses the candidate's ability to apply SAFe principles and practices in real-world scenarios, as well as their understanding of the RTE role and responsibilities.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q47-Q52):

NEW QUESTION # 47

At which Tuckman stage would an ART be if it is improving engineering practices and fostering more effective communication?

- A. Storming
- B. Forming
- C. Performing
- **D. Norming**

Answer: D

NEW QUESTION # 48

Who commits to the Iteration goals at the end of Iteration planning?

- **A. The team**
- B. The Solution Owner
- C. The Product Owner
- D. The Scrum Master

Answer: A

NEW QUESTION # 49

The business must depend on the team for what in order to do any meaningful planning?

- **A. Team capabilities**
- B. A cross-functional skill set
- C. Commitment to the plan
- D. Measurements

Answer: A

Explanation:

The business must depend on the team's capabilities to do any meaningful planning. This is because the team's capabilities determine the amount and complexity of work they can handle during a Program Increment (PI). SAFe emphasizes the importance of understanding the team's capacity and skills to ensure that the planning is realistic and achievable¹.

During PI planning, teams create PI objectives they intend to accomplish in the upcoming PI. These objectives are based on the team's understanding of their capacity and the features they need to deliver. The process requires estimating and planning, knowledge of the team's capacity, analysis of upcoming features, defining stories for the Team Backlog, and summarizing the information into simple business terms everyone can understand².

Furthermore, the Release Train Engineer (RTE) plays a vital role in facilitating PI planning events, which align all the teams on the Agile Release Train (ART) to a shared mission and vision. The RTE helps ensure planning readiness, which includes leadership and team preparedness for the event (content readiness), part of which is understanding the team's capabilities¹.

NEW QUESTION # 50

Product Management is expected to collaborate in planning the amount of upcoming En-abler work by establishing what?

- A. Team Backlog prioritization
- **B. Capacity allocation**
- C. Completed Epic acceptance criteria

Answer: B

Explanation:

Product Management is responsible for defining and supporting the building of desirable, feasible, viable, and sustainable products that meet customer needs over the product-market lifecycle. To do this effectively in a SAFe environment, they must collaborate with various stakeholders to determine the capacity allocation for upcoming Enabler work.

Enabler work refers to the activities that support the development of business features, such as exploration, architecture,

infrastructure, and compliance. These are necessary to advance the Solution and build its architectural runway. The capacity allocation for Enabler work is a collaborative effort between Product Management, System Architects/Engineering, and other stakeholders. This ensures that sufficient capacity is allocated for both feature and enabler work, balancing the need to address technical debt, architectural advancements, and other necessary activities that enable future delivery of value.

The SAFe framework suggests a 'capacity allocation' approach where a certain percentage of the team's capacity is allocated to Enabler work. This is not a fixed number but rather a guideline to ensure that teams invest in necessary work that may not directly deliver new customer features but is essential for the long-term health and adaptability of the product. By establishing a capacity allocation for Enabler work, Product Management ensures that there is a balance between delivering new features and maintaining the technical quality and flexibility of the product to adapt to future changes. This approach helps in managing the investment in Enabler work and ensures that it is not overlooked in the pursuit of immediate feature delivery.

NEW QUESTION # 51

Product Management is responsible for which activity?

- A. Defining Program Backlog content
- B. Prioritizing the Portfolio Backlog
- C. Establishing an architectural vision for the Agile Release Release Train

Answer: A

NEW QUESTION # 52

.....
