Valid Fortinet FCP_FAZ_AN-7.6 Exam Topics - Pdf FCP_FAZ_AN-7.6 Files

Our FCP_FAZ_AN-7.6 study materials boost three versions and they include the PDF version, PC version and the APP online version. The clients can use any electronic equipment on it. If only the users' equipment can link with the internet they can use their equipment to learn our FCP_FAZ_AN-7.6 study materials. They can use their cellphones, laptops and tablet computers to learn our FCP_FAZ_AN-7.6 study materials. The great advantage of the APP online version is if only the clients use our FCP_FAZ_AN-7.6 Study Materials in the environment with the internet for the first time on any electronic equipment they can use our FCP_FAZ_AN-7.6 study materials offline later. So the clients can carry about their electronic equipment available on their hands and when they want to use them to learn our FCP_FAZ_AN-7.6 study materials they can take them out at any time and learn offline.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q21-Q26):

NEW QUESTION # 21
After a generated a repot, you notice the information you were expecting to see in not included in it. However, you confirm that the logs are there:
Which two actions should you perform? (Choose two.)

- A. Check the time frame covered by the report.
- B. Disable auto-cache.
- C. Test the dataset.
- D. Increase the report utilization quota.

Answer: A,C

Explanation:
When a generated report does not include the expected information despite the logs being present, there are several factors to check to ensure accurate data representation in the report.
* Option A - Check the Time Frame Covered by the Report:
* Reports are generated based on a specified time frame. If the time frame does not encompass the period when the relevant logs were collected, those logs will not appear in the report. Ensuring the time frame is correctly set to cover the intended logs is crucial for accurate report content.
* Conclusion: Correct.
* Option B - Disable Auto-Cache:
* Auto-cache is a feature in FortiAnalyzer that helps optimize report generation by using cached data for frequently used datasets. Disabling auto-cache is generally not necessary unless there is an issue with outdated data being used. In most cases, it does not directly impact whether certain logs are included in a report.
* Conclusion: Incorrect.
* Option C - Increase the Report Utilization Quota:
* The report utilization quota controls the resource limits for generating reports. While insufficient quota might prevent a report from generating or completing, it does not typically cause specific log entries to be missing. Therefore, this option is not directly relevant to missing data within the report.
* Conclusion: Incorrect.
* Option D - Test the Dataset:
* Datasets in FortiAnalyzer define which logs and fields are pulled into the report. If a dataset is misconfigured, it could exclude certain logs. Testing the dataset helps verify that the correct data is being pulled and that all required logs are included in the report parameters.
* Conclusion: Correct.
Conclusion:
* Correct Answer: A. Check the time frame covered by the report and D. Test the dataset.
* These actions directly address the issues that could cause missing information in a report when logs are available but not displayed.

NEW QUESTION # 22
Which log will generate an event with the status Unhandled?

- A. An AppControl log with action=blocked.
- B. An IPS log with action=pass.
- C. An AV log with action=quarantine.
- D. A WebFilter log will action=dropped.

Answer: B

Explanation:
In FortiOS 7.4.1 and FortiAnalyzer 7.4.1, the "Unhandled" status in logs typically signifies that the FortiGate encountered a security event but did not take any specific action to block or alter it. This usually occurs in the context of Intrusion Prevention System (IPS) logs. IPS logs with action=pass: When the IPS engine inspects traffic and determines that it does not match any known attack signatures or violate any configured policies, it assigns the action "pass". Since no action is taken to block or modify this traffic, the status is logged as "Unhandled."

NEW QUESTION # 23
What is the purpose of running the command diagnose sql status sqlreportd?

- A. To view a list of scheduled reports
- B. To display the SQL query connections and hcache status
- C. To identify the database log insertion status

- D. To list the current SQL processes running

Answer: B

Explanation:
The command diagnose sql status sqlreportd is used in FortiAnalyzer to obtain specific information about the SQL reporting process and caching status. Here's what this command accomplishes and an analysis of each option:
* Command Functionality:
* sqlreportd is the FortiAnalyzer daemon responsible for managing SQL-based reporting processes.
* The diagnose sql status sqlreportd command provides information on active SQL query connections and the hcache (historical cache) status, which helps in monitoring and troubleshooting SQL report generation.
* Option Analysis:
* Option A - To View a List of Scheduled Reports:
* This option is incorrect because the command does not list scheduled reports. Instead, it focuses on SQL reporting processes and cache details.
* Option B - To List the Current SQL Processes Running:
* While the command may show active SQL connections, its primary focus is not a detailed list of all SQL processes but rather the connections and cache status for reporting.
* Option C - To Display the SQL Query Connections and hcache Status:
* This is correct. The command specifically provides information on SQL query connections related to the reporting process (sqlreportd) and displays the hcache status.
* Option D - To Identify the Database Log Insertion Status:
* This is incorrect. The command does not provide details on log insertion status. Log insertion status is typically monitored through different diagnostic commands focused on database processes and log handling.
Conclusion:
* Correct Answer: C. To display the SQL query connections and hcache status
* This command is used to monitor SQL reporting activities and cache status, aiding in the analysis of report generation performance and connection health.

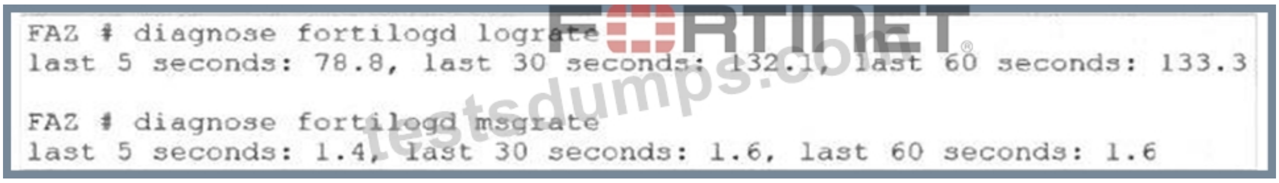
NEW QUESTION # 24
Refer to the exhibit.



```
FAZ # diagnose fortilogd lograte
last 5 seconds: 78.8, last 30 seconds: 132.1, last 60 seconds: 133.3

FAZ # diagnose fortilogd msgrate
last 5 seconds: 1.4, last 30 seconds: 1.6, last 60 seconds: 1.6
```

What can you conclude about the output?

- A. There are more event logs than traffic logs.
- B. The output is not ADOM specific.
- C. The low indexing values require investigation.
- D. The log rate higher than the message rate is not normal.

Answer: D

NEW QUESTION # 25
When managing incidents on FortiAnlyzer, what must an analyst be aware of?

- A. You can manually attach generated reports to incidents.
- B. Severity incidents rated with the level High have an initial service-level agreement (SLA) response time of 1 hour.
- C. The status of the incident is always linked to the status of the attach event.
- D. Incidents must be acknowledged before they can be analyzed.

Answer: A

Explanation:

In FortiAnalyzer's incident management system, analysts have the option to manually manage incidents, which includes attaching relevant reports to an incident for further investigation and documentation. This feature allows analysts to consolidate information, such as detailed reports on suspicious activity, into an incident record, providing a comprehensive view for incident response.
Let's review the other options to clarify why they are incorrect:
* Option A: You can manually attach generated reports to incidents
* This is correct. FortiAnalyzer allows analysts to manually attach reports to incidents, which is beneficial for providing additional context, evidence, or analysis related to the incident. This functionality is part of the incident management process and helps streamline information for tracking and resolution.
* Option B: The status of the incident is always linked to the status of the attached event
* This is incorrect. The status of an incident on FortiAnalyzer is managed independently of the status of any attached events. An incident can contain multiple events, each with different statuses, but the incident itself is tracked separately.
* Option C: Severity incidents rated with the level High have an initial service-level agreement (SLA) response time of 1 hour
* This is incorrect. While incidents have severity levels, specific SLA response times are typically set according to the organization's incident response policy, and FortiAnalyzer does not impose a default SLA response time of 1 hour for high-severity incidents.
* Option D: Incidents must be acknowledged before they can be analyzed
* This is incorrect. Incidents on FortiAnalyzer can be analyzed even if they are not yet acknowledged. Acknowledging an incident is often part of the workflow to mark it as being actively addressed, but it is not a prerequisite for analysis.
* According to FortiAnalyzer documentation, analysts can attach reports to incidents manually, making option A correct. This feature enables better tracking and documentation within the incident management system on FortiAnalyzer.

NEW QUESTION # 26
......

So many candidates have encountered difficulties in preparing to pass the FCP_FAZ_AN-7.6 exam. But our study materials will help candidates to pass the exam easily. Our FCP_FAZ_AN-7.6 guide questions can provide statistics report function to help the learners to find weak links and deal with them. The FCP_FAZ_AN-7.6 Test Torrent boost the function of timing and simulating the exam. They set the timer to simulate the exam and help the learners adjust the speed and keep alert. So the FCP_FAZ_AN-7.6 guide questions are very convenient for the learners to master and pass the exam.
