300-720題庫更新 - 300-720考試指南

您是否在尋找可靠的學習資料來準備即將來的300-720考試？如果是的話，您可以嘗試VCESoft的產品和服務。我們提供最新的Cisco 300-720考古題是經過眾多考生和專家檢驗過的學習指南，保證成功率百分之百的考古題。對於購買300-720題庫產品的客戶，我們還提供一年的免費更新服務。所以，您不必擔心，Cisco 300-720學習指南不僅讓您更準確的了解考試的出題點，還能讓您更有範圍的學習相關知識，高效率的通過300-720考試。

最新的 CCNP Security 300-720 免費考試真題 (Q130-Q135):

問題 #130

When configuring CRES, where do you enable read receipts?

- A. In the encryption profile
- B. In the mail policy
- C. In the content filter condition menu
- D. In the content filter action menu

答案：A

問題 #131

Which process is skipped when an email is received from safedomain.com, which is on the safelist?

- A. message filter
- **B. antispam scanning**
- C. antivirus scanning
- D. outbreak filter

答案: B

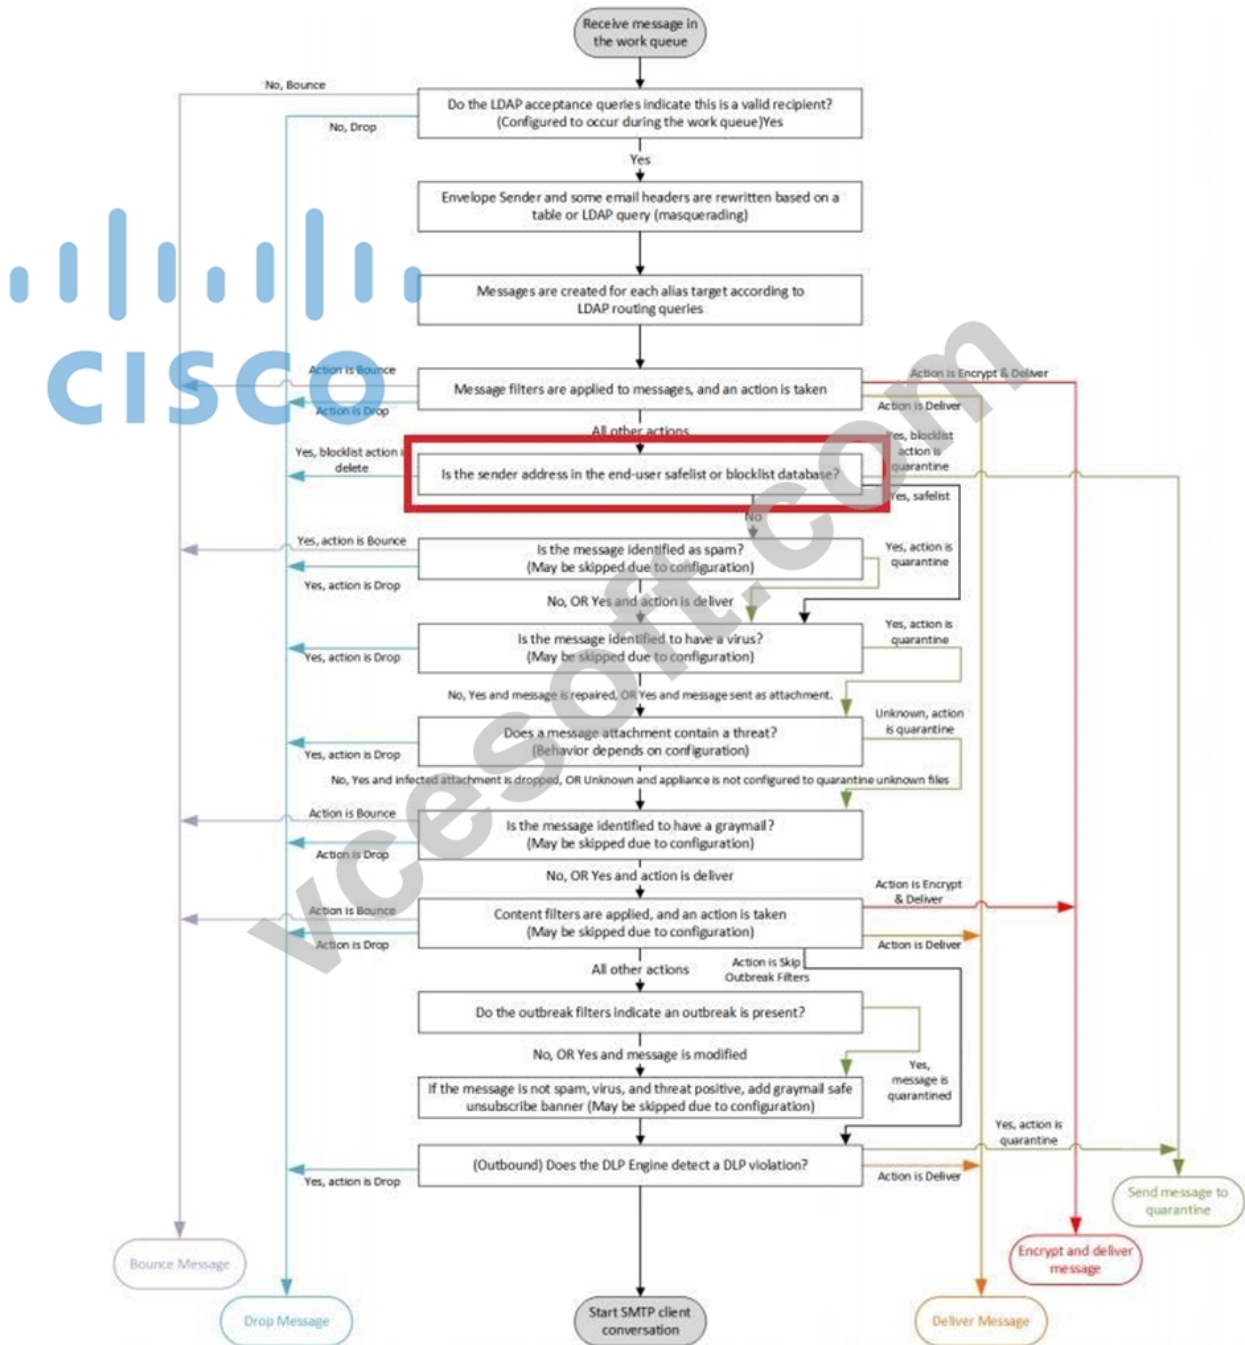

解題說明:

Message Processing of Safelists and Blocklists

A sender's being on a safelist or blocklist does not prevent the appliance from scanning a message for viruses or determining if the message meets the criteria for a content-related mail policy. Even if the sender of a message is on the recipient's safelist, the message may not be delivered to the end user depending on other scanning settings and results.

When you enable safelists and blocklists, the appliance scans the messages against the safelist/blocklist database **immediately before anti-spam scanning**. If the appliance detects a sender or domain that matches a safelist or blocklist entry, the message will be splintered if there are multiple recipients (and the recipients have different safelist/blocklist settings). For example, a message is sent to both recipient A and recipient B. Recipient A has safelisted the sender, whereas recipient B does not have an entry for the sender in the safelist or the blocklist. In this case, the message may be split into two messages with two message IDs. The message sent to recipient A is marked as safelisted with an *X-SLBL-Result-Safelist* header and skips anti-spam scanning, whereas the message bound for recipient B is scanned by the anti-spam scanning engine. Both messages then continue along the pipeline (through anti-virus scanning, content policies, and so on) and are subject to any configured settings.

問題 #132

Which feature must be configured before an administrator can use the outbreak filter for nonviral threats?

- A. antivirus
- B. data loss prevention
- C. antispam
- D. quarantine threat level

答案: C

解題說明:

The feature that must be configured before an administrator can use the outbreak filter for nonviral threats is antispam. The outbreak

filter relies on the antispam engine to detect and block nonviral threats, such as phishing, malware, or spam campaigns. You need to enable antispam scanning and configure the antispam settings before you can use the outbreak filter.

問題 #133

An organization wants to designate help desk personnel to assist with tickets that request the release of messages from the spam quarantine because company policy does not permit direct end-user access to the quarantine. Which two roles must be used to allow help desk personnel to release messages while restricting their access to make configuration changes in the Cisco Secure Email Gateway? (Choose two.)

- A. Technician
- B. Help Desk User
- C. Read-Only Operator
- D. Administrator
- E. Quarantine Administrator

答案： B,E

解題說明：

All users with administrator privileges can change spam quarantine settings and view and manage messages in the spam quarantine. You do not need to configure spam quarantine access for administrator users.

If you configure access to the spam quarantine for users with the following roles, they can view, release, and delete messages in the spam quarantine:

- Operator
- Read-only operator
- Help desk user
- Guest
- Custom user roles that have spam quarantine privileges

These users cannot access spam quarantine settings.

問題 #134

Which feature must be activated on a Cisco Secure Email Gateway to combat backscatter?

- A. Bounce Verification
- B. Forged Email Detection
- C. Graymail Detection
- D. Bounce Profile

答案： A

解題說明：

To combat backscatter, which is a type of spam that consists of bounce messages sent to forged sender addresses, the administrator must enable the Bounce Verification feature under Security Settings. This feature allows the appliance to verify whether a bounce message is legitimate or not by checking if the original message was sent from the appliance. If not, the bounce message is considered as backscatter and can be dropped or quarantined. References : [Cisco Secure Email Gateway Administrator Guide - Configuring Bounce Verification]

問題 #135
