UiPath-ADPv1 Certification Exam Infor & Latest UiPath-ADPv1 Test Voucher
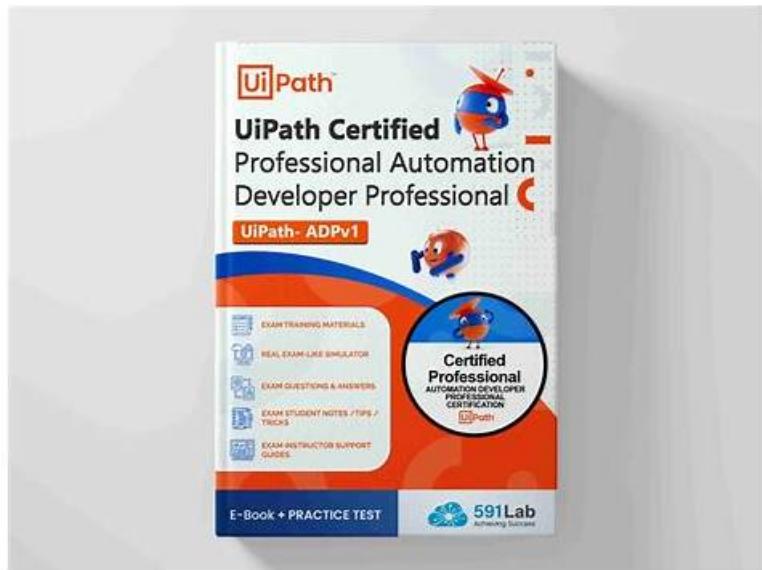

You do not need to think it is too late for you to study. As the saying goes, success and opportunity are only given to those people who are well-prepared! If you really long to own the UiPath-ADPv1 certification, it is necessary for you to act now. We are willing to help you gain the certification. In order to meet the needs of all people, the experts of our company designed such a UiPath-ADPv1 Guide Torrent that can help you pass your exam successfully.

It is known to us that passing the UiPath-ADPv1 exam is very difficult for a lot of people. Choosing the correct study materials is so important that all people have to pay more attention to the study materials. If you have any difficulty in choosing the correct UiPath-ADPv1 preparation materials, here comes a piece of good news for you. The UiPath-ADPv1 Prep Guide designed by a lot of experts and professors from company are very useful for all people to pass the practice exam and help them get the UiPath certification in the shortest time. And our pass rate is high as more than 98%.

Latest UiPath-ADPv1 Test Voucher - UiPath-ADPv1 Interactive Practice Exam

For candidates who are going to buy UiPath-ADPv1 training materials online, they may pay much attention to the quality of the exam dumps, since it will depend on whether they may pass the exam or not. UiPath-ADPv1 exam braindumps of us are reviewed by experienced specialists, therefore the quality can be guaranteed. They also check UiPath-ADPv1 Training Materials at times to ensure the timely update. Moreover, we offer you free demo to have a try, and you can have a try before buying. You will know the mode of the complete version of the UiPath-ADPv1 exam dumps.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q201-Q206):

NEW QUESTION # 201
While working in an RPA testing project, you encountered the following activity in one of the workflows included in the project.
What action can you perform in your mocked file to replace the functionality of the MessageBox with a LogMessage during mock testing?

- A. Remove mock activity.
- B. Surround activity with mock.

- C. Create mock workflow.
- D. Synchronize mock.

Answer: B

Explanation:
To replace the functionality of the MessageBox with a LogMessage during mock testing, the developer can perform the action of Surround activity with mock. This action inserts a mock activity around the selected activity, which allows the developer to change the behavior of the activity for testing purposes. For example, the developer can right-click on the MessageBox activity and select Surround activity with mock from the dropdown menu. This will create a mock activity that contains the MessageBox activity. The developer can then edit the mock activity and replace the MessageBox activity with a LogMessage activity, which will write the message to the output panel instead of displaying it in a dialog box. This way, the developer can test the functionality of the workflow without having to interact with the MessageBox dialog box. References: [Mock Testing], [Surround Activity with Mock]

NEW QUESTION # 202
Which of the following best describes the Alerts panel?

- A. A panel that displays a more comprehensive list of all alerts.
- B. A panel that displays summaries of the alerts you subscribed to, received as error reports every ten minutes, or as daily reports.
- C. A panel that displays alerts as they occur.
- D. A panel that displays the most severe five alerts, accessible from the Alerts bell.

Answer: B

Explanation:
The Alerts panel in UiPath is a feature designed to notify users about different types of alerts or events that occur within the UiPath ecosystem, especially within the Orchestrator. These can range from job failures, trigger notifications, to queue item alerts.
The best description of the Alerts panel, considering typical functionality within such systems, would be:
B: A panel that displays summaries of the alerts you subscribed to, received as error reports every ten minutes, or as daily reports.
This option suggests that the Alerts panel provides a curated view of alerts based on subscriptions, which can be configured for error reports at specified intervals or for aggregate daily reports, making it a more proactive and user-specific feature.
The other options either describe a panel with too broad a scope (A), suggest real-time alerting without the context of user subscriptions (C), or limit the display to only the most severe alerts without mention of subscription or reporting features (D).

NEW QUESTION # 203
What is the default URL of the OCR server that runs the Computer Vision service?

- A. https://computervision.uipath.com/
- B. https://cvserver.uipath.com/
- C. https://cv.uipath.com/
- D. https://server.uipath.com/

Answer: C

Explanation:
The default URL of the OCR server that runs the Computer Vision service is https://cv.uipath.com/. The Computer Vision service is a cloud-based service that provides OCR and AI capabilities for UiPath automation projects. The service can be accessed by using the Computer Vision activities in UiPath Studio, such as CV Screen Scope, CV Click, CV Type Into, and more. The service requires an API key and a URL to connect to the OCR server. The default URL is https://cv.uipath.com/, but it can be changed to a custom URL if the developer has a self-hosted OCR server. The API key can be obtained from the UiPath Automation Cloud portal or from the UiPath Marketplace. References: [About Computer Vision], [Computer Vision Activities]

NEW QUESTION # 204
In UiPath Studio, how can a specific amount of time be subtracted from the current date using DateTime and TimeSpan variables in the VB.NET?

- A. Assign the subtraction result to a DateTime variable with the following syntax Today.Subtract(Span).

- B. Use the Add method on the DateTime variable and pass a negative TimeSpan value.
- C. Multiply the TimeSpan variable by -1 and then add it to the DateTime variable.
- D. Call Now.Subtract(Span) directly, without using a DateTime variable.

Answer: B

Explanation:
In UiPath Studio, you can use DateTime and TimeSpan variables to store and manipulate date and time values.
A DateTime variable represents a specific point in time, such as the current date and time, or a date in the past or future. A TimeSpan variable represents a time interval, such as one hour, two days, or three weeks.
To subtract a specific amount of time from the current date using DateTime and TimeSpan variables in VB.NET, you can use the Add method on the DateTime variable and pass a negative TimeSpan value. For example, if you have a DateTime variable called Today that stores the current date and time, and a TimeSpan variable called Span that stores the time interval you want to subtract, you can write:
Today.Add(-Span)
This expression returns a new DateTime value that is the result of subtracting the Span value from the Today value. For example, if Today is 2024-02-08 10:51:49 and Span is 1.02:10:04, then the expression returns
2024-02-07 08:41:45.
The other options are not correct ways of subtracting a TimeSpan value from a DateTime value in VB.NET.
Option A is invalid, because you cannot multiply a TimeSpan value by a number. Option B is incorrect, because the Subtract method on the DateTime variable returns a TimeSpan value, not a DateTime value.
Option D is incorrect, because the Now property is not a method, and it cannot take a TimeSpan value as an argument.
