Because the Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) practice exams create an environment similar to the real test for its customer so they can feel themselves in the Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) real test center. This specification helps them to remove Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) exam fear and attempt the final test confidently.

Palo Alto Networks PCCP Exam Overview:

Certification Vendor:	Palo Alto Networks
Exam Name:	Palo Alto Networks Certified Cybersecurity Practitioner
Exam Number:	PCCP
Real Exam Qty:	50-60
Certificate Validity Period:	2 years
Passing Score:	70%
Exam Format:	Multiple Choice, Scenario-based
Exam Price:	\$100 USD
Related Certifications:	PCNSA PCNSE PCCET
Exam Duration:	80 minutes
Available Languages:	English, Japanese
Sample Questions:	Palo Alto Networks PCCP Sample Questions
Exam Way:	Pearson VUE testing center or online proctored exam
Pre Condition:	No formal prerequisites required. Recommended: Basic networking knowledge and familiarity with cybersecurity concepts. PCNSA certification is recommended but not required.

Popular Palo Alto Networks PCCP Exams & PCCP Valid Test Duration

We are a group of IT experts and certified trainers who write Palo Alto Networks vce dumps based on the real questions. Besides, our PCCP exam dumps are always checked to update to ensure the process of preparation smoothly. You can try our PCCP Free Download study materials before you purchase. Please feel free to contact us if you have any questions about the PCCP pass guide.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.
Topic 2	Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.
Topic 3	Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 4	Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q39-Q44):

NEW QUESTION # 39

Under which category does an application that is approved by the IT department, such as Office 365, fall?

- A. sanctioned
- B. prohibited
- C. unsanctioned
- D. tolerated

Answer: A

Explanation:

A sanctioned application is an application that is approved by the IT department and meets the security and compliance requirements of the organization. Sanctioned applications are allowed to access the organization's network and data and are monitored and protected by the IT department. Examples of sanctioned applications are Office 365, Salesforce, and Zoom.

Sanctioned applications are different from unsanctioned, prohibited, and tolerated applications, which are not approved by the IT department and may pose security risks to the organization. Unsanctioned applications are applications that are used by the employees without the IT department's knowledge or consent, such as Dropbox, Gmail, or Facebook. Prohibited applications are applications that are explicitly forbidden by the IT department, such as BitTorrent, Tor, or malware. Tolerated applications are applications that are not approved by the IT department, but are not blocked or restricted, such as Skype, Spotify, or YouTube. NEW QUESTION # 40

Data Loss Prevention (DLP) and Cloud Access Security Broker (CASB) fall under which Prisma access service layer?

- A. Network
- B. Cloud
- C. Management
- **D. Security**

Answer: D

Explanation:

A SASE solution converges networking and security services into one unified, cloud-delivered solution (see Figure 3-12) that includes the following:

- # Networking
 - # Software-defined wide-area networks (SD-WANs)
 - # Virtual private networks (VPNs)
 - # Zero Trust network access (ZTNA)
 - # Quality of Service (QoS)
- # Security
 - # Firewall as a service (FWaaS)
 - # Domain Name System (DNS) security
 - # Threat prevention
 - # Secure web gateway (SWG)
 - # Data loss prevention (DLP)
 - # Cloud access security broker (CASB)

NEW QUESTION # 41

Which of the following is a Routed Protocol?

- **A. Internet Protocol (IP)**
- B. Transmission Control Protocol (TCP)
- C. Routing Information Protocol (RIP)
- D. Domain Name Service (DNS)

Answer: A

Explanation:

A routed protocol is a protocol by which data can be routed. It provides appropriate addressing information in its internet layer or network layer to allow a packet to be forwarded from one network to another network.

Examples of routed protocols are the Internet Protocol (IP) and Internetwork Packet Exchange (IPX). IP is the most widely used routed protocol on the Internet and other networks. It assigns a unique logical address to each device and enables data to be fragmented, reassembled, and routed across multiple networks. References:

NEW QUESTION # 42

From which resource does Palo Alto Networks AutoFocus correlate and gain URL filtering intelligence?

- A. BrightCloud
- B. Unit 52
- C. MineMeld
- **D. PAN-DB**

Answer: D

Explanation:

When you enable URL Filtering, all web traffic is compared against the URL Filtering database, PAN-DB, which contains millions of URLs that have been grouped into about 65 categories.

NEW QUESTION # 43

What are two limitations of signature-based anti-malware software? (Choose two.)

- **A. It is unable to detect polymorphic malware.**
- B. It only uses packet header information.
- **C. It uses a static file for comparing potential threats.**
- D. It requires samples to be buffered

Answer: A,C

Explanation:

Signature-based systems struggle with polymorphic or obfuscated malware, which changes its code to avoid detection. Signature-based detection relies on static databases of known threat signatures, limiting its ability to identify new or unknown threats.
