CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q87-Q92):

NEW QUESTION # 87
An organization decided to begin issuing corporate mobile device users microSD HSMs that must be installed in the mobile devices in order to access corporate resources remotely. Which of the following features of these devices MOST likely led to this decision? (Choose two.)

- A. Software-backed keystore
- B. Support for stream ciphers
- C. TPM 2.0 attestation services
- D. Decentralized key management
- E. Hardware-backed public key storage
- F. Embedded cryptoprocessor

Answer: E,F

Explanation:
Embedded cryptoprocessor (option B): An embedded cryptoprocessor is a specialized chip that is designed to perform cryptographic operations, such as encrypting and decrypting data, generating and verifying digital signatures, and generating and storing cryptographic keys. By installing an HSM with an embedded cryptoprocessor in the mobile device, the organization can ensure that sensitive data is processed and stored in a secure manner.
Hardware-backed public key storage (option C): A hardware-backed keystore is a secure storage area that is physically isolated from the rest of the device and is designed to store cryptographic keys. By using an HSM with hardware-backed public key storage, the organization can ensure that public keys are stored in a secure and tamper-resistant manner, which is important for ensuring the security of digital certificates and other sensitive data.

NEW QUESTION # 88
A security manager has written an incident response playbook for insider attacks and is ready to begin testing it. Which of the following should the manager conduct to test the playbook?

- A. Automated vulnerability scanning
- B. Threat emulation
- C. Threat hunting
- D. Centralized logging, data analytics, and visualization

Answer: B

Explanation:
Explanation
Threat emulation is the method that should be used to test an incident response playbook for insider attacks.
Threat emulation is a technique that simulates real-world attacks using realistic scenarios, tactics, techniques, and procedures (TTPs) of threat actors. Threat emulation can help evaluate the effectiveness of an incident response plan by testing how well it can detect, respond to, contain, eradicate, recover from, and learn from an attack.
