The Benefits of Preparing with the Splunk SPLK-2003 Practice Test

Our Splunk SPLK-2003 practice exam simulator mirrors the SPLK-2003 exam experience, so you know what to anticipate on Splunk Phantom Certified Admin (SPLK-2003) certification exam day. Our Splunk Phantom Certified Admin practice test TrainingDump features various question styles and levels, so you can customize your Splunk SPLK-2003 Exam Questions preparation to meet your needs.

Splunk Phantom Certified Admin Sample Questions (Q45-Q50):

NEW QUESTION # 45
Which app allows a user to run Splunk queries from within Phantom?

- A. Phantom App for Splunk.
- B. Splunk App for Phantom Reporting.
- C. The Integrated Splunk/Phantom app.
- D. Splunk App for Phantom?

Answer: A

Explanation:
The Phantom App for Splunk allows a user to run Splunk queries from within Phantom. This app provides actions such as run query, ingest events, and save search, which enable the user to interact with Splunk from Phantom playbooks or the Phantom UI. The other

apps are not relevant for this use case. The Splunk App for Phantom is used to send data from Splunk to Phantom. The Integrated Splunk/Phantom app is a deprecated app that was replaced by the Splunk App for Phantom. The Splunk App for Phantom Reporting is used to generate reports on Phantom activity from Splunk. The Phantom App for Splunk is the application that enables Splunk users to run Splunk queries from within the Splunk Phantom platform. This app integrates Splunk's data and search capabilities into Phantom's security automation and orchestration framework, allowing users to perform actions such as running searches, creating events, and updating records in Splunk directly from Phantom.

NEW QUESTION # 46

How does a user determine which app actions are available?

- A. In the visual playbook editor, click Active and click the Available App Actions dropdown.
- B. From the Apps menu, click the supported actions dropdown for each app.
- C. Add an action block to a playbook canvas area.
- D. Search the Apps category in the global search field.

Answer: B

Explanation:
In Splunk SOAR, a user can determine which app actions are available by navigating to the Apps menu.
From there, the user can click on the supported actions dropdown for each app to view the actions that can be performed by that app. This dropdown menu provides a list of all the actions that the app is capable of executing, allowing the user to understand the functionality provided by the app and how it can be utilized within playbooks11.

NEW QUESTION # 47

What does a user need to do to have a container with an event from Splunk use context-aware actions designed for notable events?

- A. Rename the event_id field from the notable event to splunkNotableEventId.
- B. Add a custom field to the container named event_id and set the custom field's data type to splunk notable event id.
- C. Include the event_id field in the search results and add a CEF definition to Phantom for event_id, datatype splunk notable event id.
- D. Include the notable event's event_id field and set the artifacts label to aplunk notable event id.

Answer: C

Explanation:
For a container in Splunk SOAR to utilize context-aware actions designed for notable events from Splunk, it is crucial to ensure that the notable event's unique identifier (event_id) is included in the search results pulled into SOAR. Moreover, by adding a Common Event Format (CEF) definition for the event_id field within Phantom, and setting its data type to something that denotes it as a Splunk notable event ID, SOAR can recognize and appropriately handle these identifiers. This setup facilitates the correct mapping and processing of notable event data within SOAR, enabling the execution of context-aware actions that are specifically tailored to the characteristics of Splunk notable events.

NEW QUESTION # 48

Which of the following describes the use of labels in Phantom?

- A. Labels determine the service level agreement (SLA) for a container.
- B. Labels determine which playbook(s) are executed when a container is created.
- C. Labels control which apps are allowed to execute actions on the container.
- D. Labels control the default seventy, ownership, and sensitivity for the container.

Answer: B

Explanation:
In Splunk Phantom, labels are used to categorize containers and trigger specific automated responses. When a container is created, labels can be assigned to it based on the nature of the event, type of incident, or other criteria. These labels are then matched against playbooks, which have label conditions defined within them.

When the conditions are met, the corresponding playbooks are automatically executed. Labels do not directly control service level agreements, default severity, ownership, sensitivity, or app execution permissions.

NEW QUESTION # 49

What is the primary objective of using the I2A2 playbook design methodology?

- A. To create detailed playbooks.
- B. To create playbooks that customers will not edit.
- C. To meet customer requirements using a single playbook.
- D. To create simple, reusable, modular playbooks.

Answer: D

Explanation:
The primary objective of using the I2A2 playbook design methodology in Splunk SOAR is to create playbooks that are simple, reusable, and modular. This design philosophy emphasizes the creation of playbooks that can be easily understood and maintained, encourages the reuse of playbook components in different scenarios, and fosters the development of playbooks that can be modularly connected or used independently as needed.

NEW QUESTION # 50
