VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 2	<ul style="list-style-type: none"> VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

An administrator has been tasked with creating an alert in VMware Cloud Foundation (VCF) Operations with the following settings:

- Wait cycle: 2
- Cancel cycle: 2

Assuming the alert is not resolved, how much time elapses by default between the symptom triggering and the alert automatically cancelling itself?

- A. 40 minutes
- B. 20 minutes
- C. 10 minutes
- D. 4 minutes

Answer: B

NEW QUESTION # 31

How can an administrator ensure that certain VMs run on separate hosts for availability or licensing reasons?

- A. Use VM-VM Anti-Affinity rules in DRS
- B. Enable HA Admission Control
- C. Create a Resource Pool with a high share value
- D. Configure Storage vMotion to relocate disks

Answer: A

Explanation:

VM-VM Anti-Affinity rules in DRS direct VMs to not run on the same host. A Resource Pool with a high share value does not prevent co-location, and Storage vMotion or HA Admission Control do not specifically separate VMs across hosts at runtime.

NEW QUESTION # 32

An administrator is tasked with deploying a new VMware Cloud Foundation (VCF) fleet consisting of two VCF instances. Which two components would the administrator need to install after initial deployment to have a full-stack VCF monitoring solution? (Choose two.)

- A. VCF Operations Management Pack Builder
- B. VCF Operations Fleet Management
- C. VCF Operations for Networks
- D. VCF Operations
- E. VCF Operations for Logs

Answer: B,C

Explanation:

Fleet Management: "VCF Operations Fleet Management enables cross-instance monitoring, unifying health and metrics across multiple VCF instances." Operations for Networks: "Provides application and network visibility, dependency mapping, and traffic analytics. Required to complete full-stack monitoring." Core VCF Operations is already deployed as part of the management stack and does not need to be added separately.

Operations for Logs is optional for log aggregation, not mandatory for full-stack observability.

NEW QUESTION # 33

Which of the following are valid considerations for advanced iSCSI configuration in ESXi?

- A. Ensuring Jumbo Frames are consistently configured end-to-end
- B. Using a dedicated VLAN or subnet for iSCSI traffic
- C. Binding each VMkernel iSCSI port to a unique physical NIC for multipathing
- D. Setting ephemeral port binding for all iSCSI traffic

Answer: A,B,C

Explanation:

Jumbo Frames (A) must match across switches and NICs. VMkernel port binding (B) and a dedicated VLAN/subnet (D) are best practices for performance and security. Ephemeral port binding (C) is typically not used for iSCSI; static binding is recommended.

NEW QUESTION # 34

Which vSphere feature ensures CPU compatibility across a cluster, allowing vMotion between hosts with different processor generations?

- A. vSphere Replication
- B. EVC (Enhanced vMotion Compatibility)
- C. Resource Pools
- D. vSAN Encryption

Answer: B

Explanation:

EVC masks or exposes only the CPU features that are compatible across a cluster. This allows for seamless vMotion across hosts with slightly different CPU feature sets.
