Now, you are fortunate enough to purchase our ChromeOS-Administrator study questions. Our study materials are compiled by professional experts. They have researched the annual real Google ChromeOS-Administrator exam for many years.

Google Professional ChromeOS Administrator Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77
How would you deploy your "Terms of Services" page to all managed ChromeOS devices?

- A. Navigate to "Chrome Verified Access" and enable the policy for content protection
- B. In "User & Browser Settings" upload the "Terms of Service" as a wallpaper
- C. Go to "User & Browser and "Managed Guest Session' settings to upload your terms of service
- D. Navigate to "User & Browser" and "Managed Guest Session" settings to upload your custom avatar

Answer: C

Explanation:
* Go to the Google Admin console.
* Navigate to "Device Management" > "Chrome Management" > "User & browser settings".
* Find the section for "Managed Guest Session".
* Locate the setting for "Terms of Service".
* Upload your "Terms of Service" document in plain text format.
This will present your Terms of Service to users when they log in as a guest on any managed ChromeOS device.
Why other options are incorrect:
* A. Chrome Verified Access: This is for controlling access to corporate resources, not displaying terms of service.
* C. Wallpaper: Using the wallpaper to display terms of service is not practical or user-friendly.
* D. Custom avatar: The avatar is for user personalization and not related to terms of service.

NEW QUESTION # 78
A global organization is deploying a fleet of ChromeOS devices to all their users. Organization policy requires all web traffic to be filtered using an existing proxy service to prevent access to 1 million unauthorized websites. What ChromeOS policy should you configure to meet this requirement?

- A. "Always use the proxy specified below", and provide the IP port to the proxy services
- B. "Always use the proxy specified below", and provide the URL to pac file configuration
- C. "Always use the proxy auto-config specified below", and provide the IP port information
- D. "Always use a network access control deny" policy to deny the URLs

Answer: B

Explanation:
To ensure that all web traffic is filtered according to organizational policy, configure the ChromeOS devices to "Always use the proxy specified below" and provide the URL to the PAC (Proxy Auto-Config) file. The PAC file contains logic to determine which proxy server to use for specific URLs, allowing dynamic and flexible proxy configurations.
Verified Answer from Official Source:
The correct answer is verified from the Google ChromeOS Proxy Configuration Guide, which outlines using a PAC file to configure web filtering for large-scale deployments.
"Use the 'Always use the proxy specified below' setting and specify the URL to the PAC file to enforce consistent web filtering across all ChromeOS devices." PAC files are commonly used to direct traffic through specific proxies based on URL patterns, which is ideal for managing large lists of restricted websites efficiently.
Objectives:
* Configure ChromeOS devices to use web proxies.
* Enforce consistent web filtering through proxy settings.

NEW QUESTION # 79
What should an administrator do to view the number and type of ChromeOS upgrades purchased and in use by their domain?

- A. Verify upgrades on devices page
- B. Contact partner to verify
- C. Check reports page for upgrades
- D. Check subscriptions in billing

Answer: D

Explanation:
To view the number and type of ChromeOS upgrades purchased and in use, administrators should check the
"Subscriptions" section in the billing area of the Google Admin console. This section provides a clear overview of the organization's
ChromeOS upgrade subscriptions and usage.
Other options are incorrect because they don't directly provide information about ChromeOS upgrade subscriptions:
* Option A (Verify upgrades on devices page): Shows upgrades on individual devices, not the overall purchase and usage.
* Option C (Contact partner to verify): Unnecessary if the information is readily available in the Admin console.
* Option D (Check reports page for upgrades): Might provide some usage data, but not the purchase details.

* Sign in to your Admin console: https://support.google.com/chrome/a/answer/182076?hl=en

NEW QUESTION # 80
You need to get to the enterprise enrollment screen. What should you do?

- A. Press Ctrl-Alt-E during the Chrome bootup sequence (Chrome logo animation)
- B. Press Ctrl-Alt-F on the initial welcome screen to set initial settings
- C. Press Ctrl-Alt-E at the user login screen before any user has signed in to the device
- D. Sign in with enterprise enrollment credentials provided by the customer at the user sign-in screen

Answer: A

Explanation:
* Power on or reboot the Chromebook.
* Watch for the Chrome logo animation. This is the key moment to trigger enterprise enrollment.
* Press Ctrl+Alt+E simultaneously. This keyboard shortcut interrupts the normal boot process and redirects the Chromebook to the
enterprise enrollment screen.
* Follow the on-screen instructions. You'll be prompted to enter information such as the domain name of the organization and
enrollment credentials.
Why this is the correct method:
* Enterprise Enrollment Timing: The Ctrl+Alt+E shortcut is specifically designed to be used during the bootup sequence, before any
user profile is loaded. This ensures the device is enrolled in the organization's management system from the start.
* Alternative Options: The other options mentioned are incorrect:
* B (Sign in with credentials): This assumes the device is already enrolled and is used for regular user login.
* C (Ctrl+Alt+F): This shortcut is used for accessing the ChromeOS developer shell (Crosh) and is
* not related to enrollment.
* D (Ctrl+Alt+E at login): While technically possible to enroll at the login screen, it's not the recommended method as it might not
apply settings correctly to all user profiles.

NEW QUESTION # 81
You are a ChromeOS Administrator of a school district While working with a teacher in one of the schools, they mention they are
having issues downloading files on their ChromeOS device. What are some ways you can help troubleshoot with the least amount of
disruption to the user?

- A. Run Diagnostics from the ChromeOS device to troubleshoot
- B. Check for system updates If any updates are available install them
- C. Check how much storage Is being used on the device then delete or move files that aren't needed anymore
- D. Reset the user's ChromeOS device to its original factory settings

Answer: C

Explanation:
When a teacher is having issues downloading files on their ChromeOS device, it's important to troubleshoot with minimal disruption. Here are steps to address the issue:
* Check Storage: Start by checking the available storage on the device. If the storage is full or nearly full, it could prevent new files from being downloaded.
* Manage Files: Guide the teacher to delete or move files that are no longer needed. This can be done through the Files app on the ChromeOS device.
* Clear Cache: If storage isn't the issue, clearing the browser cache can sometimes resolve download problems.
* Check Network: Ensure that the device has a stable internet connection, as an unstable connection can interrupt downloads.

NEW QUESTION # 82

......

Solutions is one of the top platforms that has been helping Google ChromeOS-Administrator exam candidates for many years. Over this long time period countless candidates have passed their dream ChromeOS-Administrator exam. They all got help from Exams.
