220-1101 Study Group & 220-1101 Exam Tests

It can be said that all the content of the 220-1101 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little

practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the 220-1101 Study Materials provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our 220-1101 training materials, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.

The CompTIA 220-1101 exam consists of 90 multiple-choice and performance-based questions, which must be completed within a time limit of 90 minutes. To pass the exam, candidates must demonstrate their knowledge of computer components, operating systems, troubleshooting techniques, network infrastructure, and cybersecurity principles. Successful completion of 220-1101 exam validates the candidate's understanding of the core concepts and skills required for a successful career in IT.

CompTIA A+ Certification Exam: Core 1 (220-1101) covers a wide range of topics, including hardware, networking, mobile devices, virtualization and cloud computing, and troubleshooting. 220-1101 Exam is designed to test the candidate's knowledge and skills in installing, configuring, and maintaining computer hardware and software. 220-1101 exam also covers the basic principles of networking, including TCP/IP, DNS, DHCP, and wireless networking. Additionally, the exam covers the latest trends in technology, such as virtualization and cloud computing.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q845-Q850):

NEW QUESTION # 845

A thermal printer that is used to print order tickets in a factory has been experiencing issues following the failure of the air conditioner during the summer. Each ticket has blank spots or is missing text. Which of the following would MOST likely solve these issues?

- A. Replace the paper rolls.
- **B. Restore function to the air conditioner.**
- C. Install new toner.
- D. Clean the heating element.

Answer: B

Explanation:

Explanation

It appears that option A, restoring function to the air conditioner, would most likely solve the thermal printer issue in the described scenario. The failure of the air conditioner during the summer could likely have caused high humidity or heat in the factory, which can affect the printing quality of thermal printers by causing blank spots or missing text. By restoring function to the air conditioner, the temperature and humidity in the factory can be controlled, which can help eliminate these printing issues. However, it is still possible that any of the other options listed could also potentially solve the issue, so it is best to assess the situation further and try different solutions if necessary.

NEW QUESTION # 846

A user's mobile device can back up classified files to an external hard drive at work but cannot save pictures to an external drive at home. Which of the following is most likely the issue?

- A. The pictures do not have a classification flag set.
- **B. Peripherals are managed via MDM.**
- C. The drive permissions are insufficient.
- D. Drivers are incorrectly installed.

Answer: B

Explanation:

The most likely issue that prevents the user's mobile device from saving pictures to an external drive at home is that the peripherals are managed via MDM (mobile device management). MDM is a software solution that allows an organization to remotely control, secure, and enforce policies on mobile devices, such as smartphones, tablets, or laptops. MDM can also restrict the access and functionality of the peripherals, such as external drives, cameras, microphones, or printers, that are connected to the mobile devices. One of the possible reasons why the user's mobile device can back up classified files to an external hard drive at work but not save pictures to an external drive at home is that the MDM policy allows only authorized peripherals to be used with the mobile device. For example, the MDM policy may require the external drive to have a certain encryption level, a specific serial number, or a valid certificate to be recognized by the mobile device. The external drive at work may meet these criteria, while the external drive at home may not. Therefore, the mobile device can back up the classified files to the external drive at work, but it cannot save the

pictures to the external drive at home.

To resolve this issue, the user may need to contact the IT administrator or the MDM provider and request permission to use the external drive at home. Alternatively, the user may need to use a different method to transfer the pictures from the mobile device to the external drive, such as using a cloud service, a wireless network, or a USB cable.

NEW QUESTION # 847

Which of the following allows several websites from different companies to be housed on the same virtual server?

- A. Shared resources
- B. Rapid elasticity
- C. High availability
- D. Metered utilization

Answer: A

Explanation:

Shared resources is the concept that allows several websites from different companies to be housed on the same virtual server. A virtual server is a software-based server that runs on a physical server and can host multiple virtual machines (VMs). Each VM can run a different operating system and application, such as a website, and have its own allocated resources, such as CPU, memory, disk space, and network bandwidth.

However, the VMs share the underlying hardware resources of the physical server, which reduces the cost and complexity of maintaining separate servers for each website. This also enables rapid scalability, as new VMs can be created or deleted as needed. One of the methods to host multiple websites on the same virtual server is to use virtual hosts. Virtual hosts are a feature of web servers, such as Apache, that allow the web server to serve different websites based on the domain name or IP address requested by the client. For example, a web server can host two websites, a.

example.com and b.example.com, on the same virtual server and the same port (such as 80 or 443), by using virtual hosts to map each domain name to a different document root directory. The web server will then deliver the content of the corresponding website to the client based on the domain name in the HTTP request header.

NEW QUESTION # 848

A user reports that a display is slow to turn on, and the colors are distorted and discolored. Once the display turns on, it appears to have lines going through the image and intermittently goes blank. Which of the following is the most likely cause of the issue?

- A. Display burn-in
- B. Physical cabling issues
- C. Incorrect resolution settings
- D. Incorrect refresh rate
- E. Incorrect data source

Answer: B

Explanation:

Physical cabling issues refer to any problems with the cables or connectors that connect a display to a computer or a power source. Physical cabling issues can cause various symptoms, such as slow to turn on, distorted and discolored images, lines going through the image, and intermittent blank screens. The technician should check the cables and connectors for any damage, looseness, or interference.

NEW QUESTION # 849

After a required operating system upgrade on a mobile device, a user's external monitor no longer works. Which of the following should a technician do to fix this issue?

- A. Restore the operating system to the previous version.
- **B. Install the latest graphics drivers.**
- C. Replace the monitor.
- D. Reseat the external video adapter.

Answer: B

Explanation:

The most likely cause of the external monitor not working after an operating system upgrade is that the graphics drivers are incompatible with the new version. Installing the latest graphics drivers from the manufacturer's website or using Windows Update can resolve this issue.

Replacing the monitor, restoring the operating system to the previous version, or reseating the external video adapter are not effective solutions for this problem.
