MB-820 Free Sample Questions & Practice MB-820 Exam Pdf

In order to help you enjoy the best learning experience, our PDF MB-820 study guide supports you download on your computers and print on papers. In this way, you can make the best use of your spare time. Whatever you are occupied with your work, as long as you really want to learn our MB-820 test engine, you must be inspired by your interests and motivation. Once you print all the contents of our MB-820 Practice Test on the paper, you will find what you need to study is not as difficult as you imagined before. Also, you can make notes on your papers to help you memorize and understand the difficult parts. Maybe you are just scared by yourself. Getting the MB-820 certificate is easy with the help of our test engine. You should seize the opportunities of passing the exam.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q117-Q122):

NEW QUESTION # 117
You need to implement the Issue Management module and expose the PostIssue method.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
NOTE: Note than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions

Create a local procedure named *PostIssueImpl* in the "Issue Management" codeunit.

Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssue method defined in the "Issue Management Impl." codeunit.

Create a codeunit named "Issue Management Impl." and set the value of Access property to Public.

Create a codeunit named "Issue Management" and set the value of Access property to Public.

Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.

Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.

Create a PostIssue procedure in the "Issue Management Impl." codeunit and add the needed code to the procedure.

Steps to implement the Issue Management module

Answer:

Explanation:

Actions

Create a local procedure named *PostIssueImpl* in the "Issue Management" codeunit.

Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssue method defined in the "Issue Management Impl." codeunit.

Create a codeunit named "Issue Management Impl." and set the value of Access property to Public.

Create a codeunit named "Issue Management" and set the value of Access property to Public.

Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.

Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.

Create a PostIssue procedure in the "Issue Management Impl." codeunit and add the needed code to the procedure.

Steps to implement the Issue Management module

Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.

Create a local procedure named *PostIssueImpl* in the "Issue Management" codeunit.

Create a codeunit named "Issue Management" and set the value of Access property to Public.

Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.

Explanation:

Here is the most logical sequence of actions for implementing the Issue Management module in Business Central and exposing the PostIssue method:

Correct Order:

* Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.

* This is the first step because Issue Management Impl. is the implementation layer where the actual business logic resides, and setting it to Internal ensures that it is only accessible from within the module, following best practices in encapsulation.

* Create a local procedure named PostIssueImpl in the "Issue Management Impl." codeunit.

* This step adds the actual PostIssueImpl method, which contains the core logic of posting an issue.

* Create a codeunit named "Issue Management" and set the value of Access property to Public.

* After defining the implementation logic, you need to create a public-facing Issue Management codeunit to expose the service

externally.

* Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.

* Lastly, expose the PostIssue method in the Issue Management codeunit, which will internally call the PostIssueImpl method, completing the chain.

NEW QUESTION # 118

You are cleaning up sandbox environments for a company.

The company requires data to be cleared from the environments each time an extension is published.

You need to configure the launch.json file.

Which schemaUpdateMode property should you set?

- A. ForceSync
- B. Synchronize
- C. Recreate
- D. ForceUpgrade

Answer: C

Explanation:

In the context of cleaning up sandbox environments for a company where data needs to be cleared each time an extension is published, the schemaUpdateMode property in the launch.json file should be set to Recreate (D). Setting this property to Recreate ensures that every time the extension is published, the existing tables and data are dropped, and then the tables are recreated based on the current extension's schema. This mode is particularly useful in development and testing environments where you need a clean slate for testing each version of the extension without the remnants of previous data affecting the outcomes. It's important to use this setting cautiously, as it results in the loss of all existing data in the tables defined by the extension, which is suitable for a sandbox environment but not for production environments.

NEW QUESTION # 119

You create a page with the PageType property set to RoleCenter.

You navigate through the different sections of the page.

You need to add functionalities to the page.

What should you do?

- A. Define actions in the area (reporting) before actions in the area (creation).
- B. Define the navigation bar in the area (embedding).
- C. Define the navigation menu in the area(processing).
- D. Add a source table on the Role Center page.

Answer: A

Explanation:

When creating a page with the PageType property set to RoleCenter in Microsoft Dynamics 365 Business Central, it's essential to organize the functionalities and actions in a manner that enhances user experience and efficiency. The best practice is to define actions in the area (reporting) before actions in the area (creation) (A). This organization allows users to access reporting and analytical features quickly, which are commonly used in Role Centers for overview and insight purposes, before moving on to creation or transactional tasks. This logical flow aligns with typical user workflows, where analysis and review precede the creation of new records or transactions. The other options, such as defining the navigation menu in the area(processing) (B), defining the navigation bar in the area (embedding) (C), or adding a source table on the Role Center page (D), do not directly address the need to add functionalities to the Role Center page in a user-friendly manner.

NEW QUESTION # 120

- A.
`traces | where timestamp > ago(7d) | where customDimensions == 'RT0008' | where customDimensions.category == 'SOAP'`

- B.
`traces | where timestamp > ago(7d) | where customDimensions == 'RT0008' | where customDimensions.category != 'ODataV4'`

- C. Option D

- D. Option A
- E.

```
traces | where timestamp > ago(7d)  | where customDimensions has 'RT0008'   | where customDimensions.category == 'SOAP'
```

- F.

```
traces | where timestamp > ago(7d)   | where customDimensions has 'RT0008'  | where customDimensions.category !in ('ODataV4', 'ODataV3', 'Api')
```

- G. Option E
- H. Option B
- I. Option C
- J.

```
traces | where timestamp > ago(7d)    | where customDimensions has 'RT0008'  | where customDimensions.category !in ('ODataV4', 'Api')
```

Answer: A,D,F,I

Explanation:
The task is to identify unwanted incoming web service calls during the last seven days. To do this, we need to look at KQL (Kusto Query Language) queries that would filter out web service calls based on the timestamp (to ensure the calls are within the last seven days) and by certain characteristics that would indicate they are unwanted, such as the wrong type of protocol (SOAP in this case, as Contoso Ltd. plans to dismiss using it).
Looking at the options:
Option A: This query selects all traces where the timestamp is within the last 7 days and where the custom dimension has a value of 'RT0008', and where the category is either 'ODataV4', 'ODataV3', or 'Api'. This query would show all API calls except SOAP, so it does not directly answer the question about unwanted calls.
Option B: This query filters for traces with a timestamp within the last 7 days, where 'RT0008' is present, and specifically looks for the category 'SOAP'. This query is correct because it directly targets SOAP calls, which are the unwanted calls according to Contoso Ltd.'s plans.
Option C: Similar to option B, this query filters for traces within the last 7 days and looks for 'RT0008' but uses the equality operator for the category 'SOAP'. This would also correctly return the unwanted SOAP calls.
Option D: This query also filters for traces within the last 7 days, but it excludes the 'ODataV4' category, which doesn't necessarily target the unwanted SOAP calls.
Option E: This query selects traces where the timestamp is within the last 7 days and the custom dimension has 'RT0008'. However, it filters out categories 'ODataV4' and 'Api', which does not directly help in identifying the unwanted SOAP calls.
Therefore, the queries that should be used to determine if there are unwanted incoming web service calls (SOAP calls) in the tenant during the last seven days are Options B and C. These queries are specific to identifying SOAP protocol usage, which is what Contoso Ltd. considers unwanted.

NEW QUESTION # 121
Drag and Drop Question
A company owns and operates hotels, restaurants, and stores.
When the staff orders materials from the purchasing department, the requests are not directed to the correct approvers.
The staff requires a new field named Approver from which they can select the appropriate approver. The field must include the following options:
- Hotel manager
- Restaurant manager
- Store manager
- Purchasing manager
You need to create the Approver field in the Item table by using an AL extension.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 122

......

Our society needs to various comprehensive talents, rather than a man only know the book knowledge but not understand the applied to real bookworm, therefore, we need to get the MB-820 certification, obtain the corresponding certifications. What a wonderful news it is for everyone who wants to pass the certification exams. There is a fabulous product to prompt the efficiency-- the MB-820 Exam Prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams.
