

Free PDF 2026 Databricks Databricks-Certified-Data-Analyst-Associate: Valid Databricks Certified Data Analyst Associate Exam Exam Questions

The Databricks-Certified-Data-Analyst-Associate exam questions are being offered in three different formats. The names of these formats are Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) desktop practice test software, web-based practice test software, and PDF dumps file. The Databricks desktop practice test software and web-based practice test software both give you real-time Databricks Databricks-Certified-Data-Analyst-Associate Exam environment for quick and complete exam preparation.

Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.
Topic 2	Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.
Topic 3	SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.
Topic 4	Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.

Topic 5	• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints • warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint • warehouses, trade-off between cluster size and cost for Databricks SQL endpoints • warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.

Valid Databricks Databricks-Certified-Data-Analyst-Associate Exam Format, Databricks-Certified-Data-Analyst-Associate Valid Test Sims

Every user has rated study material positively and passed the Databricks-Certified-Data-Analyst-Associate Exam. ActualTestsQuiz gives a guarantee to the customers that if they fail to pass the Databricks Certified Data Analyst Associate Exam (Databricks-Certified-Data-Analyst-Associate) certification on the very first try despite all their efforts they can claim their money back according to terms and conditions. A team of experts is working day and night in order to make the product successful day by day and provide the customers with the best experience.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

What is used as a compute resource for Databricks SQL?

- A. Standard clusters
- B. Single-node clusters
- C. SQL warehouses
- D. Downstream BI tools integrated with Databricks SQL

Answer: C

NEW QUESTION # 33

A data analyst has been asked to produce a visualization that shows the flow of users through a website. Which of the following is used for visualizing this type of flow?

- A. Heatmap
- B. Word Cloud
- C. Pivot Table
- D. Sankey
- E. IChoropleth

Answer: D

Explanation:

A Sankey diagram is a type of visualization that shows the flow of data between different nodes or categories. It is often used to represent the movement of users through a website, as it can show the paths they take, the sources they come from, the pages they visit, and the outcomes they achieve. A Sankey diagram consists of links and nodes, where the links represent the volume or weight of the flow, and the nodes represent the stages or steps of the flow. The width of the links is proportional to the amount of flow, and the color of the links can indicate different attributes or segments of the flow. A Sankey diagram can help identify the most common or popular user journeys, the bottlenecks or drop-offs in the flow, and the opportunities for improvement or optimization. Reference: The answer can be verified from Databricks documentation which provides examples and instructions on how to create Sankey diagrams using Databricks SQL Analytics and Databricks Visualizations. Reference links: Databricks SQL Analytics - Sankey Diagram, Databricks Visualizations - Sankey Diagram

NEW QUESTION # 34

A data analyst created and is the owner of the managed table `my_ table`. They now want to change ownership of the table to a single other user using Data Explorer.

Which of the following approaches can the analyst use to complete the task?

- A. Edit the Owner field in the table page by selecting the Admins group
- B. Edit the Owner field in the table page by removing all access
- C. Edit the Owner field in the table page by selecting the new owner's account
- D. Edit the Owner field in the table page by selecting All Users
- E. Edit the Owner field in the table page by removing their own account

Answer: C

Explanation:

The Owner field in the table page shows the current owner of the table and allows the owner to change it to another user or group. To change the ownership of the table, the owner can click on the Owner field and select the new owner from the drop-down list. This will transfer the ownership of the table to the selected user or group and remove the previous owner from the list of table access control entries¹. The other options are incorrect because:

A) Removing the owner's account from the Owner field will not change the ownership of the table, but will make the table ownerless².

B) Selecting All Users from the Owner field will not change the ownership of the table, but will grant all users access to the table³.

D) Selecting the Admins group from the Owner field will not change the ownership of the table, but will grant the Admins group access to the table³.

E) Removing all access from the Owner field will not change the ownership of the table, but will revoke all access to the table⁴.

Reference:

1: Change table ownership

2: Ownerless tables

3: Table access control

4: Revoke access to a table

NEW QUESTION # 35

A data analyst creates a Databricks SQL Query where the result set has the following schema:

`region STRING`

`number_of_customer INT`

When the analyst clicks on the "Add visualization" button on the SQL Editor page, which of the following types of visualizations will be selected by default?

- A. Violin Chart
- B. There is no default. The user must choose a visualization type.
- C. Line Chart
- D. Histogram
- E. IBar Chart

Answer: E

Explanation:

According to the Databricks SQL documentation, when a data analyst clicks on the "Add visualization" button on the SQL Editor page, the default visualization type is Bar Chart. This is because the result set has two columns: one of type `STRING` and one of type `INT`. The Bar Chart visualization automatically assigns the `STRING` column to the X-axis and the `INT` column to the Y-axis. The Bar Chart visualization is suitable for showing the distribution of a numeric variable across different categories. Reference: Visualization in Databricks SQL, Visualization types

NEW QUESTION # 36

What is a benefit of using Databricks SQL for business intelligence (BI) analytics projects instead of using third-party BI tools?

- A. Computations, data, and analytical tools on the same platform
- B. Automated alerting systems

- C. Simultaneous multi-user support
- D. Advanced dashboarding capabilities

Answer: A

Explanation:

Databricks SQL offers a unified platform where computations, data storage, and analytical tools coexist seamlessly. This integration allows business intelligence (BI) analytics projects to be executed more efficiently, as users can perform data processing and analysis without the need to transfer data between disparate systems. By consolidating these components, Databricks SQL streamlines workflows, reduces latency, and enhances data governance. While third-party BI tools may offer advanced dashboarding capabilities, simultaneous multi-user support, and automated alerting systems, they often require integration with separate data processing platforms, which can introduce complexity and potential inefficiencies.

NEW QUESTION # 37

.....

Our delivery speed is also highly praised by customers. Our Databricks-Certified-Data-Analyst-Associate exam dumps won't let you wait for such a long time. As long as you pay at our platform, we will deliver the relevant Databricks-Certified-Data-Analyst-Associate test prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of Databricks-Certified-Data-Analyst-Associate Test Braindumps, please let us know, a message or an email will be available. We are pleased that you can spare some time to have a look for your reference about our Databricks-Certified-Data-Analyst-Associate test prep.
