

# Reliable Archer-Expert Exam Online, Archer-Expert Technical Training

Love is precious and the price of freedom is higher. Do you think that learning day and night has deprived you of your freedom? Then let Our Archer-Expert guide tests free you from the depths of pain. With Archer-Expert guide tests, learning will no longer be a burden in your life. You can save much time and money to do other things what meaningful. You will no longer feel tired because of your studies, if you decide to choose and practice our Archer-Expert Test Answers. Your life will be even more exciting.

If you are preparing for the Archer Certified Administrator-Expert (Archer-Expert) exam dumps our Archer-Expert Questions help you to get high scores in your Archer Archer-Expert exam. Test your knowledge of the Archer Certified Administrator-Expert exam dumps with PassTestking Archer Archer-Expert Practice Questions. The software is designed to help with Archer-Expert exam dumps preparation.

## Archer-Expert Technical Training - Latest Archer-Expert Dumps Free

You will obtain these updates entirely free if the Archer Archer-Expert certification authorities issue fresh updates. PassTestking ensures that you will hold the prestigious Archer Archer-Expert certificate on the first endeavor if you work consistently, taking help from our remarkable, up-to-date, and competitive Archer Archer-Expert dumps.

## Archer Certified Administrator-Expert Sample Questions (Q21-Q26):

### NEW QUESTION # 21

The main goal of using SSO in an Archer environment is to:

- **A. Facilitate the login experience to end users by using only one set of credentials across all their applications**
- B. Facilitate the login experience to Admin users only
- C. Have end users insert their username and password each time they log into Archer
- D. Bypass the default Archer Security Parameters for the user

**Answer: A**

Explanation:

The primary driver for Single Sign-On (SSO) in an Archer environment is user convenience and centralized identity management. As taught in Archer Administration II, the "goal" of SSO is to reduce the friction of accessing the platform. By allowing users to leverage their existing corporate credentials (via SAML, Windows Integrated, or LDAP), they can access Archer without needing to maintain a separate, "native" Archer password.

This strategy improves security by centralizing credential management in a single Identity Provider (IdP), where Multi-Factor Authentication (MFA) and account revocation policies can be strictly enforced. Option A is incorrect because SSO actually helps enforce enterprise security parameters rather than bypassing them.

Option B is false because SSO is intended for all users, not just admins. Option C describes the opposite of SSO. Ultimately, the successful implementation of SSO ensures that users have a seamless transition into Archer while the organization maintains a high

standard of access control.

### NEW QUESTION # 22

Administrators can grant users Application access through:

- A. A DDE
- B. Groups
- C. Record Permission Field
- **D. Access Roles**

**Answer: D**

Explanation:

In the Archer security hierarchy, Access Roles are the primary mechanism used to grant functional access to an application. According to the Archer Administration II curriculum, an Access Role defines "what" a user can do (Create, Read, Update, Delete) within a specific application. While Groups (Option B) are used to organize users, a group itself does not grant permissions until that group is linked to an Access Role.

Record Permission Fields (Option D) are used for "Record-Level Security"-narrowing down which specific records a user can see but they cannot grant access to the application itself if the user doesn't first have an Access Role granting them entry. DDEs (Option C) are used for UI automation and cannot manage security permissions. Therefore, to provide a user with the ability to see an application icon in their workspace and interact with its data, an administrator must assign them to an Access Role that has the "Read" right (and potentially others) selected for that specific application module.

### NEW QUESTION # 23

Which statement is NOT true for the Archer APIs?

- A. The RESTful API can use JSON for the API request and response.
- B. The Content API can use XML for the API request and response.
- **C. The SOAP API can use JSON for the API request and response.**
- D. The RESTful API can use XML for the API request and response.

**Answer: C**

Explanation:

According to the Archer API Guide and Administration II materials, the Archer APIs have specific formatting requirements based on their architecture. The SOAP API (Simple Object Access Protocol) is strictly bound to the XML-based SOAP protocol. It uses a Web Services Description Language (WSDL) to define the structure of its messages, and these messages must be formatted as XML. It cannot process or return JSON payloads.

In contrast, the RESTful API is more flexible; while it defaults to JSON for modern integrations, it is capable of supporting both XML and JSON depending on the "Content-Type" and "Accept" headers provided in the request. The Content API, which is a specific subset of the Archer RESTful infrastructure, also follows these multi-format capabilities. Therefore, the statement that the SOAP API can use JSON is the incorrect one. For administrators building integrations, understanding this distinction is vital, as modern web applications typically prefer JSON, but legacy Archer SOAP services will reject any request that is not valid XML.

### NEW QUESTION # 24

When selecting "Load Fields" in the Source Definition tab > Source Data sub-tab of an Archer Web Services Transporter Data Feed, no fields appear. What should you check to fix this?

- **A. Confirm the settings on the Transport Configuration section within the Source Connection tab are correct.**
- B. Confirm the Data Feed is set to Active.
- C. Confirm the Data Feed target application or questionnaire is set correctly.
- D. Confirm the settings on the Source Definition tab > Data Filter sub-tab are correct.

**Answer: A**

Explanation:

The Archer Web Services Transporter is used for "Archer-to-Archer" data feeds. For the "Load Fields" button to work, Archer

must be able to successfully authenticate and connect to the source instance's API to retrieve the report metadata.

As detailed in the Archer Administration II Data Feed module, if no fields appear, it almost always indicates a communication failure between the Feed Manager and the Web Service. The Transport Configuration section (found on the Source Connection tab) contains the critical connection details: the Base URL, the Instance Name, and the User Credentials. If the credentials are incorrect, the URL is mistyped, or the "Session Token" cannot be generated, Archer cannot "see" the source report's structure, and thus the field list will remain empty. Checking the connection settings is the primary troubleshooting step before looking at filters or target mappings.

#### NEW QUESTION # 25

SAML SSO facilitates the user login into a Service Provider (Archer) through the Identity Provider (eg: Okta).

- A. FALSE
- B. TRUE

**Answer: B**

Explanation:

This statement is TRUE and represents the standard architecture for Federated Single Sign-On. In the context of SAML (Security Assertion Markup Language), Archer acts as the Service Provider (SP), which is the application the user wants to access. The Identity Provider (IdP), such as Okta, PingFederate, or Azure AD, is the system that holds the user's credentials and performs the actual authentication.

As detailed in the Archer installation and security guides, when a user attempts to log into Archer via SAML, Archer sends an authentication request to the IdP. The IdP authenticates the user and sends a "SAML Assertion" (a signed digital token) back to Archer. Archer then validates this token and allows the user access without them ever having to type their password directly into the Archer interface. This workflow is a cornerstone of modern enterprise security, allowing for centralized identity management and the enforcement of Multi-Factor Authentication (MFA) at the IdP level.

#### NEW QUESTION # 26

.....

Maybe you have desired the Archer-Expert certification for a long time but don't have time or good methods to study. Maybe you always thought study was too boring for you. Our Archer-Expert study materials will change your mind. With our Archer-Expert exam questions, you will soon feel the happiness of study. Just look at the three different versions of our Archer-Expert learning quiz: the PDF, Software and APP online which can apply to study not only on the paper, but also can apply to study on IPAD, phone or laptop.
