Exam FCP_FMG_AD-7.4 Reviews, Latest FCP_FMG_AD-7.4 Dumps Book

FreeCram customizable practice exams (desktop and web-based) help students know and overcome their mistakes. The

customizable Fortinet FCP_FMG_AD-7.4 practice test means that the users can set the Questions and time according to their needs so that they can feel the real-based exam scenario and learn to handle the pressure. The updated pattern of Fortinet FCP_FMG_AD-7.4 Practice Test ensures that customers don't face any real issues while preparing for the test.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28

Exhibit.

Given the configuration shown in the exhibit, what are two results from this configuration? (Choose two.)

- A. Concurrent read-write access to an ADOM is disabled.
- B. Two or more administrators can make configuration changes at the same time, in the same ADOM.
- C. The same administrator can lock more than one ADOM at the same time.
- D. You can validate administrator login attempts through external servers.

Answer: A,C

Explanation:

The configuration shown in the exhibit sets the workspace-mode to normal. The workspace mode in FortiManager defines how configuration changes and administrative tasks are handled, specifically regarding locking and collaboration in ADOMs (Administrative Domains).

Understanding the workspace modes:

* Normal Mode: In this mode, only one administrator at a time can lock and edit an ADOM. The changes made by one administrator must be completed and saved before another administrator can make changes. It prevents concurrent read-write access within the same ADOM.

* Workflow Mode: This mode allows multiple administrators to work on different tasks within the same ADOM, but changes still need to be approved before being committed.

Explanation of Options:

* A. You can validate administrator login attempts through external servers.

* This option is unrelated to the workspace mode. External authentication servers can be used for administrator logins, but that is a different configuration setting (not related to workspace-mode).

* B. The same administrator can lock more than one ADOM at the same time.

* This is true. In Normal mode, an administrator can lock multiple ADOMs, meaning they can work on more than one ADOM simultaneously, but each ADOM can only be accessed by one administrator at a time for read-write purposes.

* C. Two or more administrators can make configuration changes at the same time, in the same ADOM.

* This is false. In Normal mode, only one administrator can have read-write access to an ADOM at a time. If another administrator attempts to make changes, they must wait until the ADOM is unlocked by the first administrator.

* D. Concurrent read-write access to an ADOM is disabled.

* This is true. In Normal mode, concurrent read-write access is disabled. This means only one administrator at a time can make changes to an ADOM. Other administrators can view the ADOM in read-only mode but cannot make changes until the ADOM is unlocked.

NEW QUESTION # 29

Which configuration setting for FortiGate is part of an ADOM-level database on FortiManager?

- A. Routing
- B. Security profiles
- C. NSX-T Service Template
- D. SNMP

Answer: A

NEW QUESTION # 30

What happens if you create an ADOM with version 7.2, add FortiGate devices running FortiOS 7.2, and then upgrade the FortiGate devices to FortiOS 7.4?

- A. The ADOM can concurrently manage FortiGate devices running different firmware versions.
- B. Adding higher version FortiGate devices to a lower version ADOM triggers an automatic ADOM upgrade.
- C. Upgrading the FortiGate devices to FortiOS 7.4 may result in ADOM database corruption.
- D. The ADOM restricts access to devices running lower firmware versions.

Answer: A

NEW QUESTION # 31

Refer to the exhibit. Given the configuration shown in the exhibit, what are two results from this configuration? (Choose two.)

```
FortiManager # config system global
(global)# set workspace-mode normal
(global)# end
FortiManager #
```

- A. Concurrent read-write access to an ADOM is disabled.
- B. Two or more administrators can make configuration changes at the same time, in the same ADOM.
- C. The same administrator can lock more than one ADOM at the same time.
- D. You can validate administrator login attempts through external servers.

Answer: A,C

NEW QUESTION # 32

Which output is displayed right after moving the ISFW device from one ADOM to another?

- A.

```
FortiManager # diagnose dvm device list ISFW
--- There are currently 4 devices/vdoms managed ---
--- There are currently 4 devices/vdoms count for license ---

TYPE      OID      SN              HA      IP      NAME      ADOM      IPS      FIRMWARE
fmgfaz-managed 325      FGVM010000077646 -      10.0.1.200 ISFW      ADOM74      6.00741 (regular) 7.0 MR4 (2463)
|- STATUS: dev-db: not modified; conf: in sync; cond: OK; dm: auto-updated; conn: up
|- vdom:[3]root flags:1 adom:ADOM74 pkg:[out-of-sync]ISFW
```

- B.

```
FortiManager # FortiManager # diagnose dvm device list ISFW
--- There are currently 4 devices/vdoms managed ---
--- There are currently 4 devices/vdoms count for license ---

TYPE      OID      SN              HA      IP      NAME      ADOM      IPS      FIRMWARE
fmgfaz-managed 325      FGVM010000077646 -      10.0.1.200 ISFW      ADOM74      6.00741 (regular) 7.0 MR4 (2463)
|- STATUS: dev-db: not modified; conf: in sync; cond: OK; dm: installed; conn: up
|- vdom:[3]root flags:0 adom:ADOM74 pkg:[never-installed]
```

- C.

```
FortiManager # diagnose dvm device list ISFW
--- There are currently 4 devices/vdoms managed ---
--- There are currently 4 devices/vdoms count for license ---

TYPE      OID      SN              HA      IP      NAME      ADOM      IPS      FIRMWARE
fmgfaz-managed 325      FGVM010000077646 -      10.0.1.200 ISFW      ADOM74      6.00741 (regular) 7.0 MR4 (2463)
|- STATUS: dev-db: not modified; conf: in sync; cond: OK; dm: retrieved; conn: up
|- vdom:[3]root flags:0 adom:ADOM74 pkg:[unknown]ISFW
```

- D.

```
FortiManager # diagnose dvm device list ISFW
--- There are currently 4 devices/vdoms managed ---
--- There are currently 4 devices/vdoms count for license ---

TYPE      OID      SN              HA      IP      NAME      ADOM      IPS      FIRMWARE
fmgfaz-managed 325      FGVM010000077646 -      10.0.1.200 ISFW      ADOM74      6.00741 (regular) 7.0 MR4 (2463)
|- STATUS: dev-db: not modified; conf: in sync; cond: OK; dm: installed; conn: up
|- vdom:[3]root flags:0 adom:ADOM74 pkg:[imported]ISFW
```

Answer: C

Explanation:

When a FortiGate device, like the ISFW (Internal Segmentation Firewall), is moved from one ADOM to another in FortiManager, the status of the device in the new ADOM will temporarily show some level of inconsistency or unknown state until the ADOM fully syncs and integrates the device.

In the provided options, we are analyzing the FortiManager diagnose dvm device list output for the ISFW device.

Explanation of the Outputs:

* Option A:

* The output shows that the device has the following status:

* dev-db: not modified

* conf: in sync

* cond: OK

* dmr: retrieved

* The key part here is the pkg: [unknown]. This suggests that the configuration package for the ADOM in the new environment is still in an unknown state, which happens right after moving the device to a new ADOM. FortiManager needs time to process the device's configuration before syncing it properly.

* Option B:

* This output shows the pkg: [out-of-sync]. This occurs after some configuration mismatch is identified, but it is not the immediate output after moving a device to a new ADOM.

* Option C:

* This output shows the pkg: [never-installed], which indicates that no package was ever installed on the device. This status typically appears when a device is newly added to FortiManager but not immediately after moving it between ADOMs.

* Option D:

* This output shows the pkg: [imported], which indicates that the device configuration has been successfully imported into the new ADOM. This would occur after the device is fully synced, but not immediately after moving the device to a new ADOM.

Conclusion:

The output that is displayed immediately after moving the ISFW device from one ADOM to another is Option A, where the package status is still unknown (pkg: [unknown]) because FortiManager has not yet fully synchronized the device's configuration in the new ADOM.

NEW QUESTION # 33

.....

The Fortinet Practice Exam feature is the handiest format available for our customers. The customers can give unlimited tests and even track the mistakes and marks of their previous given tests from history so that they can overcome their mistakes. The FCP - FortiManager 7.4 Administrator (FCP_FMG_AD-7.4) Practice Exam can be customized which means that the students can settle the time and FCP - FortiManager 7.4 Administrator (FCP_FMG_AD-7.4) Questions according to their needs and solve the test on time.
