As a thriving multinational company, we are always committed to solving the problem that our customers may have. For example, the NCP-CI-AWS learning engine we developed can make the NCP-CI-AWS exam easy and easy, and we can confidently say that we did this. A large number of buyers pouring into our website every day can prove this. Just look at it and let yourself no longer worry about the NCP-CI-AWS Exam.

Without bothering to stick to any formality, our Nutanix Certified Professional - Cloud Integration - AWS NCP-CI-AWS learning quiz can be obtained within five minutes. No need to line up or queue up to get our NCP-CI-AWS practice materials. They are not only efficient on downloading aspect, but can expedite your process of review. No harangue is included within Nutanix NCP-CI-AWS Training Materials and every page is written by our proficient experts with dedication.

Authentic NCP-CI-AWS Exam Brindumps present you first-grade Learning Guide - CertkingdomPDF

More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Our NCP-CI-AWS Exam Guide is suitable for everyone whether you are a business man or a student, because you just need 20-30 hours to practice, then you can attend to your

exam. There is no doubt that you can get a great grade. If you follow our learning pace, you will get unexpected surprises.

Nutanix NCP-CI-AWS Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Configuring an NC2 on AWS Environment: This section examines your proficiency in setting up cloud networking and security measures, as well as addressing connectivity issues.
Topic 2	<ul style="list-style-type: none">Prepare the AWS cloud environment: This exam segment evaluates your ability to set up the AWS cloud environment, initiate NC2 service subscription, establish implementation criteria, and recognize networking prerequisites.
Topic 3	<ul style="list-style-type: none">Deploying an NC2 on AWS Environment: This portion assesses your knowledge of cloud cluster deployment, cloud provider network configuration, and your skills in addressing cluster deployment challenges.
Topic 4	<ul style="list-style-type: none">Managing an NC2 on AWS Environment: This exam component tests your understanding of node and cluster management tasks, along with your ability to oversee cluster and cloud resource health.

Nutanix Certified Professional - Cloud Integration - AWS Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which service enables the monitoring of key metrics on various AWS services, including EC2, EBS, and VPC for an NC2 cluster deployments?

- A. Amazon inspector
- B. AWS CloudFormation
- C. AWS CloudTrail
- D. Amazon CloudWatch

Answer: D

Explanation:

Amazon CloudWatch is the service that enables the monitoring of key metrics on various AWS services, including EC2, EBS, and VPC, for NC2 cluster deployments.

Amazon CloudWatch:

Amazon CloudWatch provides monitoring for AWS cloud resources and applications. It collects and tracks metrics, collects and monitors log files, and sets alarms.

Specifically, for NC2 deployments, CloudWatch can be used to monitor key metrics such as CPU utilization, disk I/O, network I/O for EC2 instances, EBS volume performance, and VPC network traffic.

Features:

Metrics Monitoring: Collects and visualizes operational data in the form of metrics, including utilization, performance, and health.

Logs Monitoring: Collects log data, monitors it in real-time, and triggers alarms based on predefined thresholds.

Alarms: Notifies when operational performance thresholds are breached.

Integration with NC2:

By setting up CloudWatch, administrators can ensure they have visibility into the performance and health of their Nutanix clusters on AWS, aiding in proactive management and troubleshooting.

AWS Monitoring Best Practices

NEW QUESTION # 42

A company has a large scale AWS deployment and has just finished installing their first NC2 on AWS cluster. The new cluster is now running workloads in production.

The cluster is configured with:

- * 16 Nodes
- * 8 Subnets
- * 200 User VMs per subnet
- * Nutanix Files

An administrator has been tasked with installing an EC2 instance on one of the subnets that is also used by the Nutanix, When the EC2 instance is powered on, an IP conflict occurs.

What action should the administrator take to resolve this issue?

- A. Assign an elastic IP to the EC2 instance and reboot.
- B. The Instance Metadata of the NC2 instance needs to have the address reserved.
- C. The IP address used by the EC2 instance should be blocked / excluded from IPAM.
- **D. The IP address used by the NC2 VM should be blocked /excluded from EC2.**

Answer: D

Explanation:

To resolve the IP conflict issue when an EC2 instance is powered on in a subnet also used by Nutanix NC2, the administrator should block or exclude the IP address used by the NC2 VM from being assigned to EC2 instances. This can be done by configuring the IP address management (IPAM) settings to ensure that the specific IP addresses allocated to the NC2 VMs are not used by EC2 instances, preventing IP conflicts and ensuring smooth operation of both environments.

NEW QUESTION # 43

An administrator is creating and destroying multiple clusters daily for a test/dev environment. The administrator wants ensure that every NC2 on AWS cluster deployed will allow full access from the on-premises CVM subnet.

What is most-efficient way to achieve this?

- **A. Create a Custom AWS Network Security Group using a key value of tag:nutanix:clusters:external and set the inbound allow address of the on-premises subnet.**
- B. Modify the UVM Network Security Group of each cluster by setting the inbound allow address of the on-premises subnet.
- C. Modify the UVM Network Security Group of each cluster by setting the outbound allow address of the on-premises subnet.

Answer: A

Explanation:

D/ Create a Custom AWS Network Security Group using a key of tag:nutanix: clusters:external:cluster-uuid and set the value of the UUID for each deployed cluster. Set the inbound allow address of the on-premises subnet.

To ensure that every NC2 on AWS cluster deployed allows full access from the on-premises CVM subnet efficiently, the administrator should create a custom AWS Network Security Group.

Use a key value of tag:nutanix:clusters:external for the security group, and set the inbound allow address to the on-premises subnet.

This approach leverages AWS tags to manage security group rules dynamically and ensures that the necessary access permissions are applied automatically to all clusters with the specified tag.

This method reduces the need for manual configuration of each cluster's security group, streamlining the process for a test/dev environment where clusters are frequently created and destroyed.

Reference:

Refer to the AWS documentation on Network Security Groups and Nutanix documentation on best practices for securing NC2 clusters.

NEW QUESTION # 44

Which two features or services can an administrator ensure are protected by cluster protect within an NC2 environment? (Choose two.)

- A. VM Templates
- **B. Virtual Machine Disks**
- **C. Nutanix Files**

- D. Flow Network Security

Answer: B,C

Explanation:

Within an NC2 environment, the Cluster Protect feature can ensure the protection of:

Nutanix Files: This provides file services within the Nutanix ecosystem, and Cluster Protect can safeguard the data stored in Nutanix Files.

Virtual Machine Disks: This ensures that the data stored on virtual machine disks is protected, providing backup and recovery options for the virtual machines running within the cluster.

NEW QUESTION # 45

An administrator needs to understand which of the services implemented on their NC2 AWS deployment will be protected with Cluster protect.

Which service of feature is Cluster Protect able to both protect and recover its associated metadata?

- A. Object
- **B. VM templates**
- C. Categories
- **D. Files**

Answer: B,D

Explanation:

Cluster Protect in an NC2 environment can protect and recover the following services and their associated metadata:

VM Templates: Ensures that templates used for creating virtual machines are backed up and recoverable.

Files: Protects data stored in Nutanix Files, ensuring that file services are backed up and can be restored as needed.
