The questions and the answer provided by ITCertMagic are IT experts use their extensive knowledge and experience manufacturing out. It can help your future in the IT industry to the next level.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

A network engineer is setting up BGP on AOS-CX switches. The engineer is establishing two different eBGP peering's to two different service providers. The engineer has dozens of contiguous C-class public networks that need to be advertised to the two service providers. The engineer manually defines the networks to be advertised individually with the "network" command. How can an administrator advertise only a summarized route to the two service providers?

- A. Create a summarized static route and redistribute this into OSPR
- B. Create a summarized route in OSPF
- C. Enable auto-summarization in the IPv4 address family of the BGP configuration
- D. Summarize the networks with the "aggregate-address" BGP command

Answer: D

NEW QUESTION # 23

Which CLI command is used to verify active VLAN assignments on an Aruba CX switch?

- A. show interface vlan
- **B. show vlans**
- C. show running-config
- D. show system

Answer: B

Explanation:

The show vlans command lists all configured VLANs, including assigned interfaces, VLAN IDs, and status, aiding network troubleshooting.

NEW QUESTION # 24

Your company needs to run BGP in a multi-homed configuration to two ISPs, advertising a block of public address space you own. Which AS number would be an example of a suitable number?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

For BGP in a multi-homed configuration advertising public IP blocks, the AS number should be a valid public AS number allocated by the regional internet registry (RIR). Numbers in the private AS range (64512-65534) are not suitable for public Internet announcements.

63472 falls in the public AS range (16-bit AS numbers below 64512).

64813, 65535, and 65218 are in the private or reserved range.

Therefore, 63472 is an example of a suitable public AS number.

NEW QUESTION # 25

Which Aruba CX feature allows intelligent event-driven automation for network troubleshooting?

- **A. Network Analytics Engine (NAE)**
- B. Virtual Switching Framework (VSF)
- C. Checkpoint and Rollback
- D. Aruba NetEdit

Answer: A

Explanation:

NAE provides real-time event correlation and automation, enabling proactive monitoring, anomaly detection, and self-healing network operations.

NEW QUESTION # 26

You need to quickly verify whether a server is responding to a connection request from a client device. What is the best way to capture these packets on a CX switch?

- **A. Configure a mirror session with another port on the switch as the destination**
- B. Configure a mirror session to the CPU, use tshark to capture it to a PCAP file
- C. Inspect the summary of the packets in real time on the switch using tcpdump
- D. Configure a mirror session using ERSPAN to a computer running Wireshark

Answer: A

Explanation:

For a quick packet capture on an Aruba CX switch, the simplest and fastest method is to mirror the relevant traffic to another physical port and connect a laptop running Wireshark. This requires minimal configuration and provides immediate, full visibility into the traffic exchange between the client and server.

NEW QUESTION # 27

.....

Contrary to most of the HPE7-A08 exam preparatory material available online, ITCertMagic's dumps can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors.
