Quiz Splunk - Perfect SPLK-3002 - Valid Splunk IT Service Intelligence Certified Admin Exam Review

The desktop practice test design is best for self-appraisal and decreases the possibilities of disappointment in the Splunk IT Service Intelligence Certified Admin (SPLK-3002) Exam. It is upheld by each window PC which assists clients with clearing the Splunk SPLK-3002 certification exam with passing marks.The web-based format can be gotten online without introducing the product for

the Splunk SPLK-3002 Exam. The web-based practice test is upheld by every one of the working frameworks and programs which will be useful for Splunk IT Service Intelligence Certified Admin (SPLK-3002) exam preparation.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q91-Q96):

NEW QUESTION # 91
Which of the following are the default ports that must be configured on Splunk to use ITSI?

- A. SplunkWeb (8088), SplunkD (8089), and HTTP Collector (8000)
- B. SplunkWeb (8405), SplunkD (8519), and HTTP Collector (8628)
- C. SplunkWeb (8000), SplunkD (8089), and HTTP Collector (8088)
- D. SplunkWeb (8089), SplunkD (8088), and HTTP Collector (8000)

Answer: C

Explanation:
Reference: https://splunk.github.io/docker-splunk/ARCHITECTURE.html
C is the correct answer because ITSI uses the default ports of Splunk Enterprise for its communication and data collection.
SplunkWeb uses port 8000, SplunkD uses port 8089, and HTTP Event Collector uses port
8088. These ports can be changed if needed, but they must match the configuration of Splunk Enterprise.
References: Ports used by ITSI

NEW QUESTION # 92
When creating a custom deep dive, what color are services/KPIs in maintenance mode within the topology view?

- A. Gear Icon
- B. Purple
- C. Gray
- D. Blue

Answer: C

Explanation:
When creating a custom deep dive, services or KPIs that are in maintenance mode are shown in gray color in the topology view.
This indicates that they are not actively monitored and do not generate alerts or notable events. Reference: Deep Dives

NEW QUESTION # 93
Which glass table feature can be used to toggle displaying KPI values from more than one service on a single widget?

- A. Service dependencies.
- B. Service swapping.
- C. Service templates.
- D. Ad-hoc search.

Answer: B

Explanation:
Reference:
A glass table is a visualization tool that allows you to monitor the interrelationships and dependencies across your IT and business services. You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. One of the features of glass tables is service swapping, which enables you to toggle displaying KPI values from more than one service on a single widget. You can use service swapping to compare metrics across different services without creating multiple glass tables or widgets. Reference: Overview of the glass table editor in ITSI, [Configure service swapping on glass tables]

NEW QUESTION # 94
In which index are active notable events stored?

- A. itsi_tracked_groups
- B. itsi_notable_audit
- C. itsi_tracked_alerts
- D. itsi_notable_archive

Answer: C

Explanation:
In Splunk IT Service Intelligence (ITSI), notable events are created and managed within the context of its Event Analytics framework. These notable events are stored in the itsi_tracked_alerts index. This index is specifically designed to hold the active notable events that are generated by ITSI's correlation searches, which are based on the conditions defined for various services and their KPIs. Notable events are essentially alerts or issues that need to be investigated and resolved. The itsi_tracked_alerts index enables efficient storage, querying, and management of these events, facilitating the ITSI's event management and review process. The other options, such as itsi_notable_archive and itsi_notable_audit, serve different purposes, such as archiving resolved notable events and auditing changes to notable event configurations, respectively. Therefore, the correct answer for where active notable events are stored is the itsi_tracked_alerts index.

NEW QUESTION # 95
When changing a service template, which of the following will be added to linked services by default?

- A. Entity Rules.
- B. New KPIs.
- C. Thresholds.
- D. Health score.

Answer: B

Explanation:
C) New KPIs. This is true because when you add new KPIs to a service template, they will be automatically added to all the services that are linked to that template. This helps you keep your services consistent and up-to-date with the latest KPI definitions. The other options will not be added to linked services by default because:
A) Thresholds. This is not true because when you change thresholds in a service template, they will not affect the existing thresholds in the linked services. You need to manually apply the threshold changes to each linked service if you want them to inherit the new thresholds from the template.
B) Entity rules. This is not true because when you change entity rules in a service template, they will not affect the existing entity rules in the linked services. You need to manually apply the entity rule changes to each linked service if you want them to inherit the new entity rules from the template.
D) Health score. This is not true because when you change health score settings in a service template, they will not affect the existing health score settings in the linked services. You need to manually apply the health score changes to each linked service if you want them to inherit the new health score settings from the template.

NEW QUESTION # 96
......

The Splunk SPLK-3002 certification is one of the top-rated career advancement certifications in the market.
