Latest Integration-Architect Test Cost | Integration-Architect Practice Braindumps

Our Integration-Architect exam questions have a very high hit rate, of course, will have a very high pass rate. Before you select a product, you must have made a comparison of your own pass rates. Our Integration-Architect study materials must appear at the top of your list. And our Integration-Architect learning quiz has a 99% pass rate. This is the result of our efforts and the best gift to the user. Our Integration-Architect Study Materials can have such a high pass rate, and it is the result of step by step that all members uphold the concept of customer first. If you use a trial version of Integration-Architect training prep, you will want to buy it!

Someone always asks: Why do we need so many certifications? One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain better job, earn more salary. This is the reason that we need to recognize the importance of getting the test Integration-Architect certifications. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Therefore, the Integration-Architect Guide Torrent can help users pass the qualifying examinations that they are required to participate in faster and more efficiently.

Fast, Hands-On Integration-Architect Exam-Preparation Questions

To make you capable of preparing for the Salesforce Integration-Architect exam smoothly, we provide actual Salesforce Integration-Architect exam dumps. Hence, our accurate, reliable, and top-ranked Salesforce Integration-Architect exam questions will help you qualify for your Salesforce Certified Integration Architect Integration-Architect Certification. Do not hesitate and check out Salesforce Certified Integration Architect Integration-Architect practice exam to stand out from the rest of the others.

Salesforce Certified Integration Architect exam is a rigorous test that covers a wide range of integration topics, from data integration to application integration and everything in between. Candidates must have a deep understanding of the Salesforce platform and its various APIs to Pass Integration-Architect Exam. They must also be able to design and implement scalable, secure, and reliable integration solutions that meet the business requirements.

Salesforce Certified Integration Architect Sample Questions (Q47-Q52):

NEW QUESTION # 47
An integration architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system.
What should the integration architect determine before recommending a solution?

- A. Data access prevention requirements, integration requirements, and system constraints
- B. Data access prevention requirements, then identify frequency
- C. Inbound integration requirements, then identify frequency

Answer: B

NEW QUESTION # 48

A large consumer goods manufacturer operating in multiple countries is planning to implement Salesforce for their Sales and Support operations globally. They have the following security requirements:

1. Internal users from each country have to be authenticated with their local active directory.
2. Customers can create their own login or use Google login.
3. Partners have to be authenticated through a central system which is to be determined.
4. Internal users will have access to the central ERP with their credentials maintained in the ERP.
5. Additional internal systems will be integrated with Salesforce for Sales and Support business processes.

Which three requirements should the integration architect evaluate while designing the integration needs of this project?
Choose 3 answers

- A. Assess security requirements for internal systems and decide Integration methods that support the requirements.
- B. Evaluate Salesforce solution for customers and for partners, using third party solution for internal users.
- C. Evaluate the build of a custom authentication mechanism for users in each country and support for customers and partners.
- D. Consider Third party Single Sign On solution supporting all user authentication including customer and partner.
- E. Evaluate Salesforce native authentication mechanism for all users including customers and partners.

Answer: A,C,E

NEW QUESTION # 49

A company needs to integrate a legacy on-premise application that can only support SOAP API. The integration architect determines that the Fire and Forget integration pattern is most appropriate for sending data from Salesforce to the external application and getting a response back in a strongly-typed format. Which integration capabilities should be used?

- A. Platform Events for Salesforce to Legacy System direction and SOAP API using Enterprise WSDL for the communication back from legacy system to Salesforce
- B. Outbound Messaging for Salesforce to Legacy System direction and SOAP API using Partner Web Services Description Language (WSDL) for the communication back from legacy system to Salesforce
- C. Outbound Messaging for Salesforce to Legacy System direction and SOAP API using Enterprise WSDL for the communication back from legacy system to Salesforce

Answer: C

Explanation:
For an outbound, declarative, Fire-and-Forget integration to a legacy SOAP-based system, Salesforce Outbound Messaging is the native tool of choice. Outbound Messaging sends an XML message to a designated endpoint when specific criteria are met. It is highly reliable as Salesforce will automatically retry the delivery for up to 24 hours if the target system is unavailable.
For the communication back from the legacy system to Salesforce, a strongly-typed SOAP API approach is required. The Enterprise WSDL is the correct recommendation here because it is a strongly-typed WSDL that is specific to the organization's unique data model (including custom objects and fields). Using the Enterprise WSDL allows the legacy system to communicate with Salesforce using specific data types, providing compile-time safety and reducing errors during the mapping process.
Option A is less efficient because Platform Events would likely require middleware to translate the event into the legacy system's SOAP format. Option B suggests the Partner WSDL, which is loosely-typed and designed for developers building tools that must work across many different Salesforce orgs. Since this is an internal integration for a specific company, the Enterprise WSDL provides a much more streamlined development experience with better data integrity. By combining Outbound Messaging (for fire-and-forget delivery) and the Enterprise WSDL (for the strongly-typed callback), the architect fulfills the technical requirements while minimizing custom code.

NEW QUESTION # 50

Northern Trail Outfitters (NTO) has recently changed its Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.
Which consideration should an integration architect evaluate before choosing a middleware solution?

- A. The middleware solution enforces the OAuth security protocol.
- B. The middleware solution is able to interface directly with databases via an Open Database Connectivity (ODBC) connection string.

- C. An API Gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.

Answer: C

NEW QUESTION # 51
A global financial company with a core banking system processing 1 million transactions per day wants to build a community portal. Customers need to review their bank account details and transactions. What should an integration architect recommend to enable community users to view their financial transactions?

- A. Use Iframe to display core banking financial transactions data in the customer community.
- B. Use Salesforce Connect to display the financial transactions as an external object.

Answer: B

Explanation:
When dealing with high-volume data (1 million transactions per day) that does not need to be stored natively in Salesforce, the architect should recommend Data Virtualization via Salesforce Connect.
Salesforce Connect allows the company to display external data as External Objects. This approach provides several architectural advantages for a banking community:
* No Data Storage: Transactions remain in the core banking system, avoiding the massive storage costs and complex synchronization logic required to house millions of records natively in Salesforce.
* Real-Time Visibility: Because External Objects are queried on-demand via the OData protocol or a custom Apex adapter, customers see the most up-to-date transaction history every time they refresh the page.
While an Iframe (Option B) is technically possible, it is often discouraged due to security concerns (such as clickjacking) and a poor user experience, as the Iframe does not natively integrate with Salesforce UI components or reporting. Salesforce Connect provides a "seamless" look and feel, allowing External Objects to be used in related lists and Lightning components just like standard Salesforce records, while keeping the heavy data burden on the performant core banking system.

NEW QUESTION # 52
......

To attain all these you just need to enroll in the Salesforce Integration-Architect certification exam and put in all your efforts and prepare well to crack the Salesforce Integration-Architect exam easily. For the perfect and instant Salesforce Integration-Architect preparation, you can get help from Salesforce Integration-Architect Questions. The ExamsTorrent Integration-Architect exam questions are real and will entirely assist you in Integration-Architect exam preparation and you can easily pass the final Salesforce Integration-Architect certification exam.
