# New HPE7-A01 Exam Book - Hot HPE7-A01 Pass Exam and Effective Certification Aruba Certified Campus Access Professional Exam Sample Questions

If you still feel nervous for the exam, our HPE7-A01 Soft test engine will help you to release your nerves. HPE7-A01 Soft test engine can stimulate the real environment, and you can know the general process of exam by using the exam dumps. What's more, we provide you with free update for one year, and you can get the latest information for the HPE7-A01 Learning Materials in the following year. We have online service stuff, if you have any questions about the HPE7-A01 exam braindumps, just contact us.

HPE7-A01 certification exam is an online, proctored exam that consists of 60 multiple-choice questions. Candidates will have 90 minutes to complete the exam, and the passing score is 70%. HPE7-A01 Exam Fee is $200, and it can be taken at any time from any location. Candidates who pass the exam will receive the Aruba Certified Campus Access Professional (ACCP) certification, which is valid for three years.

HPE7-A01 Pass Exam | Certification HPE7-A01 Sample Questions

If you want to understand our HPE7-A01 exam prep, you can download the demo from our web page. You do not need to spend money; because our HPE7-A01 test questions provide you with the demo for free. You just need to download the demo of our HPE7-A01 exam prep according to our guiding; you will get the demo for free easily before you purchase our products. By using the demo, we believe that you will have a deeply understanding of our HPE7-A01 Test Torrent. We can make sure that you will like our products; because you will it can help you a lot.

HPE7-A01 certification exam covers a wide range of topics, including WLAN fundamentals, ArubaOS configuration, RF fundamentals, and network security. This comprehensive coverage makes it an ideal certification for professionals looking to gain in-depth knowledge of Aruba wireless solutions and improve their career prospects.

HP HPE7-A01 exam is an essential certification program for professionals seeking to enhance their skills in designing and deploying wireless networks. HPE7-A01 Exam covers a wide range of topics, and the certification program offers a comprehensive curriculum that prepares candidates for different scenarios and challenges. Passing the exam and obtaining the Aruba Certified Access Professional (ACCP) certification will enhance the career prospects of networking professionals and demonstrate their expertise in wireless network design and deployment.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141
What is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports?

- A. Manually enable Enhanced Security Mode from a console session.
- B. Disable all management services on the default VRF.
- C. Implement a control plane ACL to limit access to approved IPs and/or subnets
- D. Create a dedicated management VRF, and assign the management port to it.

Answer: D

Explanation:
This is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports. A dedicated management port is a physical port that is used exclusively for out-of-band management access to the switch. A dedicated management VRF is a virtual routing and forwarding instance that isolates the management traffic from other traffic on the switch. By creating a dedicated management VRF and assigning the management port to it, the administrator can enhance the security and performance of the management access to the switch. The other options are incorrect because they either do not apply to switches with dedicated management ports or do not follow Aruba-recommended best practices.

NEW QUESTION # 142
How is Dynamic Multicast Optimization (DMO) implemented in an HPE Aruba wireless network?
DMO is configured individually tor each SSID in use in the network.
The AP uses OOS to provide equal air time for multicast traffic,
DMO is configured globally for each SSID in use in the network.
The controller converts multicast streams into unicast streams.

- A. DMO is not configured globally for each SSID in use in the network. DMO is configured individually for each SSID, as different SSIDs may have different multicast requirements.
- B. The AP does not use QoS to provide equal air time for multicast traffic. QoS is a feature that prioritizes different types of traffic based on their importance and latency sensitivity. QoS does not affect how multicast streams are transmitted over the wireless link.
- C. The controller does not convert multicast streams into unicast streams. The AP does the conversion, as it is closer to the wireless clients and can optimize the transmission based on the client capabilities and channel conditions.
- D. DMO is configured individually for each SSID in use in the network.
  DMO is a feature that allows the AP to convert multicast streams into unicast streams over the wireless link. This enhances the quality and reliability of streaming video, while preserving the bandwidth available to the non-video clients. DMO is configured individually for each SSID in use in the network, as different SSIDs may have different multicast requirements. According to the Aruba document Configuring WLAN Settings for an SSID Profile, one of the steps to configure DMO is: Dynamic multicast optimization: Select Enabled to allow IAP to convert multicast streams into unicast streams over the wireless link. Enabling Dynamic Multicast Optimization (DMO) enhances the quality and reliability of streaming video, while preserving the bandwidth available to the non-video clients.
  The other options are incorrect because:

Answer: D

Explanation:
The correct answer is

NEW QUESTION # 143
With Aruba CX 6300. how do you configure ip address 10 10 10 1 for the interface in default state for interface 1/1/1?

- A. int 1/1/1. switching, ip address 10 10 10 1/24
- B. int 1/1/1. ip address 10.10.10.1/24
- C. int 1/1/1. routing, ip address 10.10.10 1/24
- D. int 1/1/1. no switching, ip address 10 10 10.1/24

Answer: D

Explanation:
To configure an IP address for an interface in default state for interface 1/1/1 on Aruba CX 6300 switch, you need to disable

switching on the interface first with the command no switching. Then you can assign an IP address with the command ip address. The other options are incorrect because they either do not disable switching or use invalid keywords such as switching or routing.

NEW QUESTION # 144

You are deploying a bonded 40 MHz wide channel What is the difference in the noise floor perceived by a client using this bonded channel as compared to an unbonded 20MHz wide channel?

- A. 4dB
- B. 2dB
- C. 3dB
- D. 8dB

Answer: C

Explanation:
Explanation
The difference in the noise floor perceived by a client using a bonded 40 MHz wide channel as compared to an unbonded 20 MHz wide channel is 3 dB. The noise floor is the level of background noise in a given frequency band. When two adjacent channels are bonded, the noise floor increases by 3 dB because the bandwidth is doubled and more noise is captured. The other options are incorrect because they do not reflect the correct relationship between bandwidth and noise floor. References:

NEW QUESTION # 145

Describe the difference between Class of Service (CoS) and Differentiated Services Code Point (DSCP).

- A. CoS is only used to determine CLASS of traffic DSCP is only used to differentiate between different Classes.
- B. CoS has much finer granularity than DSCP
- C. They are similar and can be used interchangeably.
- D. CoS is only contained in VLAN Tag fields DSCP is in the IP Header and preserved throughout the IP packet flow

Answer: D

Explanation:
CoS and DSCP are both methods of marking packets for quality of service (QoS) purposes. QoS is a mechanism that allows network devices to prioritize and differentiate traffic based on certain criteria, such as application type, source, destination, etc. CoS stands for Class of Service and is a 3-bit field in the 802.1Q VLAN tag header. CoS can only be used on Ethernet frames that have a VLAN tag, and it can only be preserved within a single VLAN domain. DSCP stands for Differentiated Services Code Point and is a 6-bit field in the IP header. DSCP can be used on any IP packet, regardless of the underlying layer 2 technology, and it can be preserved throughout the IP packet flow, unless it is modified by intermediate devices.
