

One of the Best Ways to Prepare For the Integration-Architect Salesforce Certified Integration Architect Exam

What's more, part of that PassTorrent Integration-Architect dumps now are free: https://drive.google.com/open?id=1Tg78Qh6x4_UU3UHMnm1oYMNX0dQE_BK

Our Integration-Architect exam materials are compiled by experts and approved by the professionals who are experienced. They are revised and updated according to the pass exam papers and the popular trend in the industry. The language of our Integration-Architect exam torrent is simple to be understood and our Integration-Architect test questions are suitable for any learners. Only 20-30 hours are needed for you to learn and prepare our Integration-Architect Test Questions for the exam and you will save your time and energy. No matter you are the students or the in-service staff you are busy in your school learning, your jobs or other important things and can't spare much time to learn.

There are more and more people to try their best to pass the Integration-Architect exam, including many college students, a lot of workers, and even many housewives and so on. These people who want to pass the Integration-Architect exam have regard the exam as the only one chance to improve themselves and make enormous progress. So they hope that they can be devoting all of their time to preparing for the Integration-Architect Exam, but it is very obvious that a lot of people have not enough time to prepare for the important exam. Just like the old saying goes, the spirit is willing, but the flesh is weak.

The very reason for this selection of PassTorrent Salesforce Certified Integration Architect (Integration-Architect) exam questions is that they are real and updated. PassTorrent guarantees you that you will pass your Salesforce Integration-Architect exam of Salesforce certification on the very first try. PassTorrent provides its valuable users a free Integration-Architect Pdf Dumps demo test before buying the Salesforce Certified Integration Architect (Integration-Architect) certification preparation material so they may be fully familiar with the quality of the product.

Salesforce Certified Integration Architect Sample Questions (Q96-Q101):

NEW QUESTION # 96

Universal containers are planning to implement Salesforce as their CRM system. Currently they have the following systems

1. Leads are managed in a Marketing System.
2. Sales people use Microsoft Outlook to enter contacts, emails and manage activities.
3. Inventory, Billing and Payments are managed in their ERP system.
4. The proposed CRM system is expected to provide Sales and Support people the ability to have a single view of their customers and manage their contacts, emails and activities in Salesforce CRM.

What should an Integration Consultant consider to support the proposed CRM system strategy?

- A. Explore Out of box Salesforce connectors for integration with ERP, Marketing and Microsoft Outlook systems.
- B. Evaluate current and future data and system usage and then identify potential integration requirements to Salesforce.

- C. Plan for migration of customer and sales data across systems on a regular basis to keep them in sync.
- D. Propose a middleware system that can support interface between systems with Salesforce.

Answer: B

Explanation:

Explanation

The integration consultant should evaluate current and future data and system usage and then identify potential integration requirements to Salesforce. This approach can help to understand the business needs, data flows, data quality, data volume, data frequency, and data security of the proposed CRM system. Based on this analysis, the integration consultant can design and implement the best integration solution for each system, such as Marketing, ERP, or Outlook.

NEW QUESTION # 97

Northern Trail Outfitters leverages Sales Cloud. When an opportunity has changed its status to "Closed/Won" and there are products attached, the details should be passed to the OMS for fulfillment operations. The callout from Salesforce to the OMS should be synchronous. What should an integration architect do to satisfy these requirements?

- A. Write a trigger that invokes an Apex proxy class to make a REST callout to the OMS.
- **B. Build a Lightning component that makes a synchronous Apex REST callout to the OMS when a button is clicked.**
- C. Develop a batch Apex job that aggregates closed opportunities and makes a REST callout to the OMS hourly.

Answer: B

Explanation:

A synchronous requirement in Salesforce implies a Request-Reply pattern where the user waits for a response. To implement this correctly while adhering to platform constraints, the architect must initiate the callout from the User Interface (UI) layer. Option C is the correct architectural choice. By using a Lightning component and a button (or a Quick Action), the callout is initiated directly from the user's session. The component calls an Apex controller, which performs the synchronous REST callout to the OMS. This allows the user to receive immediate feedback-such as a "Success" message or an "Error" notification from the OMS-directly on the Opportunity page.

Option A is incorrect because Apex Triggers are prohibited from making synchronous callouts. If a trigger initiates a callout, it must be asynchronous (using `@future` or `Queueable Apex`), which violates the business requirement for synchronicity. Making a synchronous call from a trigger would block the database transaction and could lead to "Uncommitted Work Pending" errors or system timeouts. Option B (Batch Apex) is inherently asynchronous and delayed; an hourly job would not provide the real-time, synchronous feedback required during the "Closed/Won" transition. Therefore, moving the integration logic to a UI-driven button is the only way to satisfy the synchronous requirement while staying within Salesforce's execution and transaction limits.

NEW QUESTION # 98

An architect recommended using Apex code to make callouts to an external system to process insurance quote. What should the integration architect consider to make sure this is the right option for the integration?

- **A. The limit of pending operations in the same transaction.**
- B. The maximum number of parallel Apex callouts in a single continuation.
- C. The limit on long-running requests (total execution time).
- D. The maximum callouts in a single Apex transaction.

Answer: A

NEW QUESTION # 99

Which WSDL should an architect consider when creating an integration that might be used for more than one salesforce organization and different metadata?

- A. Enterprise WSDL
- B. Corporate WSDL
- **C. Partner WSDL**
- D. SOAP API WSDL

Answer: C

Explanation:

The Partner WSDL is the best option for creating an integration that might be used for more than one Salesforce organization and different metadata. The Partner WSDL is loosely typed and can reflect against any configuration of Salesforce. It is static and does not change if modifications are made to an organization's Salesforce configuration. Therefore, it is more flexible and adaptable than the Enterprise WSDL, which is strongly typed and bound to a specific configuration of Salesforce. References: Differences between Salesforce provided WSDL files

NEW QUESTION # 100

Universal Containers (UC) is a leading provider of management training globally. UC requested students' course registration data generated from the Salesforce student community to be synced with the learning management system (LMS). Any update to the course registration data needs to be reflected in the LMS.

Which integration mechanism should be used to meet the requirement?

- A. Outbound Message
- B. Platform Event
- **C. Change Data Capture (CDC)**
- D. Streaming API

Answer: C

Explanation:

Explanation

Change Data Capture (CDC) is the best option to meet the requirement. CDC is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations.

By subscribing to CDC events for the course registration data, the LMS can receive real-time updates and sync with Salesforce.

Streaming API is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query. However, Streaming API has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources.

Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe. Outbound Message is a workflow action that sends SOAP messages with field values to designated endpoints.

Outbound Message is not suitable for this requirement because it does not support complex data types, such as sObjects or collections.

NEW QUESTION # 101

.....

This free Salesforce Certified Integration Architect (Integration-Architect) exam questions demo download facility is available in all three Integration-Architect exam dumps formats. Just choose the best PassTorrent Salesforce Certified Integration Architect (Integration-Architect) exam demo questions format and download it quickly. If you think that Integration-Architect exam dumps can work for you then take your buying decision.
