

Reliable AWS-Solutions-Architect-Professional Real Exam, Reliable AWS-Solutions-Architect-Professional Test Testking

P.S. Free 2026 Amazon AWS-Solutions-Architect-Professional dumps are available on Google Drive shared by VCETorrent: <https://drive.google.com/open?id=1Dgn7IyyzY0DbjmWL36cBtGBDm7gS3L-S>

There are many large and small platforms for selling examination materials in the market, which are dazzling, but most of them cannot guarantee sufficient safety and reliability. Are you worried about the security of your payment while browsing? AWS-Solutions-Architect-Professional Test Torrent can ensure the security of the purchase process, product download and installation safe and virus-free. If you have any doubt about this, we will provide you professional personnel to remotely guide the installation and use.

To prepare for the exam, candidates are encouraged to review the AWS Certified Solutions Architect - Professional Exam Guide, which provides a detailed overview of the exam objectives and recommended study resources. Additionally, AWS offers a variety of training courses, practice exams, and other resources to help candidates prepare for the exam and gain the necessary knowledge and skills to succeed.

The AWS-Solutions-Architect-Professional Certification is recognized globally and is highly valued by employers. AWS Certified Solutions Architect - Professional certification demonstrates an individual's expertise in designing and deploying complex systems on AWS and is a testament to their knowledge of AWS best practices. Additionally, this certification is a prerequisite for many advanced AWS certifications, such as the AWS DevOps Engineer Professional certification, the AWS Solutions Architect Associate certification, and the AWS Security Specialty certification.

2026 Amazon AWS-Solutions-Architect-Professional Fantastic Reliable Real Exam

Our AWS-Solutions-Architect-Professional study materials are full of useful knowledge, which can meet your requirements of improvement. Also, it just takes about twenty to thirty hours for you to do exercises of the Amazon AWS-Solutions-Architect-Professional Study Guide. The learning time is short but efficient. You will elevate your ability in the shortest time with the help of our Amazon AWS-Solutions-Architect-Professional preparation questions.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q358-Q363):

NEW QUESTION # 358

A life Sciences company is using a combination of open source tools to manage data analysis workflows and Docker containers running on servers in its on-premises data to process genomics data. Sequencing data is generated and stored on a local storage area

network (SAN) and then the data is processed. The research and development teams are running into capacity issues and have decided to re-architect their genomics analysis platform on AWS to scale based on workload demands and reduce the turn around time from weeks to days.

The company has a high-speed AWS Direct Connect connection. Sequencers will generate around 200 GB of data for each genome, and individual hours to process the data with ideal compute capacity. The end result will be stored in Amazon S3. The company is expecting 10-15 job requests each day.

Which solution meets these requirements?

- A. Use regularly scheduled AWS snowball Edge devices to transfer the sequencing data into AWS. When AWS receives the Snowball Edge device and the data is loaded into Amazon S3, use events to trigger an AWS Lambda function to process the data.
- B. Use an AWS Storage Gateway file gateway to transfer the sequencing data to Amazon S3. Use S3 events to trigger an AWS job that executes on Amazon EC2 instances running the Docker containers to process the data.
- **C. Use AWS DataSync to transfer the sequencing data to Amazon S3. Use S3 events to trigger an AWS Lambda function that starts an AWS Step Functions workflow. Store the Docker images in Amazon Elastic Container Registry (Amazon ECR) and trigger AWS Batch to run the container and process the sequencing data.**
- D. Use AWS Data Pipeline to transfer the sequencing data to Amazon S3. Use S3 events to trigger an Amazon EC2 Auto group to launch custom-AMI EC2 instances running the Docker containers to process the data.

Answer: C

NEW QUESTION # 359

A financial company is planning to migrate its web application from on premises to AWS. The company uses a third-party security tool to monitor the inbound traffic to the application. The company has used the security tool for the last 15 years, and the tool has no cloud solutions available from its vendor. The company's security team is concerned about how to integrate the security tool with AWS technology.

The company plans to deploy the application migration to AWS on Amazon EC2 instances. The EC2 instances will run in an Auto Scaling group in a dedicated VPC. The company needs to use the security tool to inspect all packets that come in and out of the VPC. This inspection must occur in real time and must not affect the application's performance. A solutions architect must design a target architecture on AWS that is highly available within an AWS Region.

Which combination of steps should the solutions architect take to meet these requirements? (Select TWO.)

- **A. Provision a Gateway Load Balancer for each Availability Zone to redirect the traffic to the security tool.**
- B. Deploy the web application behind a Network Load Balancer.
- C. Deploy an Application Load Balancer in front of the security tool instances.
- **D. Deploy the security tool on EC2 instances in a new Auto Scaling group in the existing VPC.**
- E. Provision a transit gateway to facilitate communication between VPCs.

Answer: A,D

Explanation:

Explanation

Option A, Deploy the security tool on EC2 instances in a new Auto Scaling group in the existing VPC, allows the company to use its existing security tool while still running it within the AWS environment. This ensures that all packets coming in and out of the VPC are inspected by the security tool in real time. Option D, Provision a Gateway Load Balancer for each Availability Zone to redirect the traffic to the security tool, allows for high availability within an AWS Region. By provisioning a Gateway Load Balancer for each Availability Zone, the traffic is redirected to the security tool in the event of any failures or outages. This ensures that the security tool is always available to inspect the traffic, even in the event of a failure.

NEW QUESTION # 360

A company has developed a new billing application that will be released in two weeks. Developers are testing the application running on 10 EC2 instances managed by an Auto Scaling group in subnet 172.31.0.0/24 within VPC A with CIDR block 172.31.0.0/16. The developers noticed connection timeout errors in the application logs while connecting to an Oracle database running on an Amazon EC2 instance in the same region within VPC B with CIDR block 172.50.0.0/16. The IP of the database instance is hard-coded in the application instances.

Which recommendations should a solutions architect present to the developers to solve the problem in a secure way with minimal maintenance and overhead?"

- A. Disable the SrcDestCheck attribute for all instances running the application and Oracle Database. Change the default route of VPC A to point ENI of the Oracle Database that has an IP address assigned within the range of 172.50.0.0/16
- B. Create and attach internet gateways for both VPCs. Configure default routes to the internet gateways for both VPCs. Assign an Elastic IP for each Amazon EC2 instance in VPC A
- C. Create an additional Amazon EC2 instance for each VPC as a customer gateway; create one virtual private gateway (VGW) for each VPC. configure an end-to-end VPC, and advertise the routes for 172.50.0.0/16
- D. Create a VPC peering connection between the two VPCs and add a route to the routing table of VPC A that points to the IP address range of 172.50.0.0/16

Answer: D

NEW QUESTION # 361

A retail company needs to provide a series of data files to another company, which is its business partner.

These files are saved in an Amazon S3 bucket under Account A.

which belongs to the retail company. The business partner company wants one of its IAM users User_DataProcessor to access the files from its own AWS account (Account B) Which combination of steps must the companies take so that User_DataProcessor can access the S3 bucket successfully? (Select TWO.)

- A. Turn on the cross-origin resource sharing (CORS) feature for the S3 bucket in Account A.
- B. In Account A, set the S3 bucket policy to the following.

```

{
  "Effect": "Allow",
  "Action": [
    "s3:GetObject",
    "s3:ListBucket"
  ],
  "Resource": "arn:aws:s3:::AccountABucketName/*"
}

```

- C. In Account A, set the S3 bucket policy to the following.

Answer: C

NEW QUESTION # 362

A solutions architect needs to advise a company on how to migrate its on-premises data processing application to the AWS Cloud. Currently, users upload input files through a web portal. The web server then stores the uploaded files on NAS and messages the processing server over a message queue. Each media file can take up to 1 hour to process. The company has determined that the number of media files awaiting processing is significantly higher during business hours, with the number of files rapidly declining after business hours.

What is the MOST cost-effective migration recommendation?

- A. Create a queue using Amazon MQ. Configure the existing web server to publish to the new queue. When there are messages in the queue, invoke an AWS Lambda function to pull requests from the queue and process the files. Store the processed files in Amazon EFS.
- B. Create a queue using Amazon SQS. Configure the existing web server to publish to the new queue. When there are messages in the queue, invoke an AWS Lambda function to pull requests from the queue and process the files. Store the processed files in an Amazon S3 bucket.
- C. Create a queue using Amazon MQ. Configure the existing web server to publish to the new queue. When there are messages in the queue, create a new Amazon EC2 instance to pull requests from the queue and process the files. Store the processed files in Amazon EFS. Shut down the EC2 instance after the task is complete.
- D. Create a queue using Amazon SQS. Configure the existing web server to publish to the new queue. Use Amazon EC2 instances in an EC2 Auto Scaling group to pull requests from the queue and process the files. Scale the EC2 instances based on the SQS queue length. Store the processed files in an Amazon S3 bucket.

Answer: D

NEW QUESTION # 363

.....

With all these features, another plus is the easy availability of VCETorrent's products. They are instantly downloadable and supported with our online customer service to answer your queries promptly. Your preparation for exam AWS-Solutions-Architect-Professional with VCETorrent will surely be worth-remembering experience for you!
