And we always keep them to be the latest and accurate.

## Salesforce Sample Questions (Q44-Q49):

### NEW QUESTION # 44

プラットフォーム イベントが Salesforce 組織で定義された後、イベントを発行できるメカニズムはどれですか？2つの答えを選択してください

- A. 外部アプリにはカスタム Apex Web サービスが必要です。
- B. 内部アプリは Process Builder を使用できます。
- C. 内部アプリは送信メッセージを使用できます
- D. 外部アプリは標準のストリーミング API を使用できます。

Answer: B,D

Explanation:

internal apps can use processes, flows, or Apex to publish platform event messages from a Salesforce app. Process Builder is a tool that lets you automate business processes by creating processes. You can use Process Builder to publish platform event messages when a record changes or when a platform event occurs.

external apps can use Salesforce APIs to publish platform event messages. You can use any Salesforce API to create platform events, such as SOAP API, REST API, or Bulk API. The Streaming API is a Salesforce API that lets you push a stream of notifications from Salesforce to external apps. You can use the Streaming API to publish platform event messages by creating records of your event type.

Therefore, using Process Builder and Streaming API are two mechanisms to publish platform event messages after a platform event is defined in a Salesforce org.

[https://developer.salesforce.com/docs/atlas.en-us.platform\\_events.meta/platform\\_events/platform\\_events\\_publish.htm](https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_publish.htm)

### NEW QUESTION # 45

開発者は、ユーザのチェックボックスの選択に基づいて子コンポーネントを条件付きで表示する Lightning Web コンポーネントの Jest テストを作成しています。

各シナリオで正しいコンポーネントが表示または非表示になることを適切にテストするには、開発者は何をすべきでしょうか？

- A. テストごとに新しい jsdom インスタンスを作成します。
- B. 各テストの後に、`afterEach()` メソッドを使用して DOM をリセットします。
- C. 各テスト後に DOM をリセットするためのティアダウンブロックを追加します。
- D. テストごとに新しい記述ブロックを作成します。

Answer: B

Explanation:

The best way to properly test that the correct components display and hide for each scenario is to reset the DOM after each test with the `afterEach()` method. The `afterEach()` method is a lifecycle hook that runs after each test, and can be used to perform cleanup tasks, such as removing the elements from the DOM, resetting the mocks, or clearing the caches. This ensures that each test runs in a clean and isolated environment, and does not affect the results of other tests. Creating a new `describe` block for each test will not help, as the `describe` block is used to group related tests, but it does not reset the DOM after each test. Creating a teardown block to reset the DOM after each test will not work, as there is no such block in Jest, and the developer should use the `afterEach()` method instead. Creating a new jsdom instance for each test will not work, as jsdom is a JavaScript implementation of the DOM and HTML standards, and it is not a part of Jest, but a dependency that Jest uses to provide a browser-like environment. The developer should use the `document` object provided by Jest to manipulate the DOM, and use the `afterEach()` method to reset it.

### NEW QUESTION # 46

開発者は、次の HTML スニペットを使用して sObject Lightning ページに常駐する再利用可能な Aura コンポーネントを開発しています。

□ 追加のテストカバレッジを必要とせずに、`component$5` コントローラが sObject が存在する Lightning ページのコンテキストを取得するにはどうすればよいでしょうか？

- A. デザイン属性を作成し、App Builder 経由で構成します。
- B. Apex クラスで `getSubjectType` メソッドを使用します。

- C. `force:hasObjectName` を `implements` 属性に追加します。
- D. `sObject` タイプをコンポーネント属性として設定します。

**Answer: C**

#### NEW QUESTION # 47

企業は Salesforce を使用して顧客に製品を販売します。また、製品の記録システムである外部製品情報管理 (PIM) システムも備えています。

開発者は次の要件を受け取りました。

\* PIM で製品が作成または更新されるたびに、製品は `Product?` として作成または更新される必要があります。 Salesforce のレコードと、`PricebookEntry` レコードは Salesforce によって自動的に作成または更新される必要があります。

= `PricebookEntry` は、カスタム設定で指定された `Pricebook2` で作成する必要があります。

開発者はこれらの要件を満たすために何を使用する必要がありますか？

- A. イベント監視
- B. カスタム Apex REST
- C. SオブジェクトツリーREST
- D. 呼び出し可能なアクション

**Answer: B**

Explanation:

Custom Apex REST services are the optimal solution for integrating Salesforce with an external PIM system.

When a product is created or updated in the PIM, the external system can make a REST call to a custom Apex REST endpoint in Salesforce, which then can create or update the `Product2` and `PricebookEntry` records. This method allows using custom settings to determine the `Pricebook2` dynamically.

#### NEW QUESTION # 48

開発者が標準の Salesforce UI スタイルでエラー メッセージを表示したい場合、何を使用しますか？

- A. `<apexpageMessages>`
- B. `<apex:エラー>`
- C. `<apex:outputText>`
- D. `<apex:メッセージ>`

**Answer: A**

#### NEW QUESTION # 49

.....
