Professional-Cloud-Architect Learning Materials: Google Certified Professional - Cloud Architect (GCP) - Professional-Cloud-Architect Actual Lab Questions

The Professional-Cloud-Architect Learning Materials of us are pass guaranteed and money back guaranteed. Since the Professional-Cloud-Architect exam dumps are of high accuracy and high quality, and it can ensure you pass the exam successfully. We also give you any help you want, if you need any help or you have any questions, just contact us without any hesitation, we will do all we can to help you pass the exam. Just have a try, and you will benefit a lot.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q331-Q336):

NEW QUESTION # 331

You want to establish a Compute Engine application in a single VPC across two regions. The application must communicate over VPN to an on-premises network. How should you deploy the VPN?

- A. Deploy Cloud VPN Gateway in each region.
Ensure that each region has at least one VPN tunnel to the on-premises peer gateway.
- B. Use VPC Network Peering between the VPC and the on-premises network.

- C. Expose the VPC to the on-premises network using IAM and VPC Sharing.
- D. Create a global Cloud VPN Gateway with VPN tunnels from each region to the on-premises peer gateway.

Answer: A

Explanation:

Cloud VPN gateways and tunnels are regional objects.

https://cloud.google.com/network-connectivity/docs/vpn/how-to/creating-static-vpns#creating_a_gateway_and_tunnel

NEW QUESTION # 332

You are building a continuous deployment pipeline for a project stored in a Git source repository and want to ensure that code changes can be verified deploying to production. What should you do?

- A. Use Spinnaker to deploy builds to production using the red/black deployment strategy so that changes can easily be rolled back.
- B. Use Jenkins to build the staging branches and the master branch. Build and deploy changes to production for 10% of users before doing a complete rollout.
- C. Use Spinnaker to deploy builds to production and run tests on production deployments.
- **D. Use Jenkins to monitor tags in the repository. Deploy staging tags to a staging environment for testing. After testing, tag the repository for production and deploy that to the production environment.**

Answer: D

Explanation:

Reference: <https://github.com/GoogleCloudPlatform/continuous-deployment-on-kubernetes/blob/master/README.md>

NEW QUESTION # 333

For this question, refer to the JencoMart case study.

JencoMart wants to move their User Profiles database to Google Cloud Platform. Which Google Database should they use?

- **A. Google Cloud Datastore**
- B. Google Cloud SQL
- C. Cloud Spanner
- D. Google BigQuery

Answer: A

Explanation:

Common workloads for Google Cloud Datastore:

User profiles

Product catalogs

Game state

NEW QUESTION # 334

An application development team has come to you for advice. They are planning to write and deploy an HTTP(S) API using Go 1.12. The API will have a very unpredictable workload and must remain reliable during peaks in traffic. They want to minimize operational overhead for this application. What approach should you recommend?

- A. Develop the application for App Engine Flexible environment using a custom runtime
- B. Develop an application with containers, and deploy to Google Kubernetes Engine (GKE)
- C. Use a Managed Instance Group when deploying to Compute Engine
- **D. Develop the application for App Engine standard environment**

Answer: D

Explanation:

Explanation

NEW QUESTION # 335

Your customer is receiving reports that their recently updated Google App Engine application is taking approximately 30 seconds to load for some of their users. This behavior was not reported before the update.

What strategy should you take?

- A. Work with your ISP to diagnose the problem.
- B. Open a support ticket to ask for network capture and flow data to diagnose the problem, then roll back your application.
- C. Roll back to an earlier known good release, then push the release again at a quieter period to investigate. Then use Stackdriver Trace and logging to diagnose the problem.
- **D. Roll back to an earlier known good release initially, then use Stackdriver Trace and logging to diagnose the problem in a development/test/staging environment.**

Answer: D

Explanation:

Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs. Even better, you can analyze all that log data in real time.
