UiPath Agentic Automation Associate Sample Questions (Q20-Q25):

NEW QUESTION # 20

Scenario: A Citrix Administrator previously configured a Citrix Virtual Desktops Site to use evaluation licenses. The administrator then installed valid advanced licenses on the Citrix License Server and confirmed that licenses show correctly in the licensing console. However, a user reports an issue about logging on to the published desktop. The user receives an error message stating that the evaluation license is about to expire. What should the administrator do to fix this issue?

- A. Restart the License service.
- B. Verify the host name entry in the license file.
- C. Remove the evaluation license.
- D. Change the product edition in Citrix Studio.

Answer: D

Explanation:

After installing valid licenses on the License Server, the Site must be configured in Citrix Studio to use the correct product edition (for example, Advanced, Enterprise, or Premium). If it remains set to "evaluation," users will continue to see the expiration warning. Updating the product edition in Studio resolves the issue.

NEW QUESTION # 21

Scenario: A Citrix Administrator has enabled an HDX Session printers policy within a Citrix Virtual Apps and Desktops Site. The administrator added a printer to a print server and assigned the printer to all users through a session printer policy. In addition, several local client printers are auto-created within HDX sessions. No other printing policies are configured. How will print jobs be routed when users send print jobs to a printer managed by the print server?

- A. Over the HDX virtual channel to the specified printer attached to the print server
- **B. Directly to the network print server and then to the specified printer**
- C. Directly from the session Virtual Delivery Agent (VDA) machine to the printer
- D. Over the HDX virtual channel, through the endpoint, and then to the print server

Answer: B

Explanation:

When using session printers from a print server, print jobs are routed directly from the VDA to the network print server, which then forwards them to the physical printer. The HDX virtual channel is only used for client printers, not for print server-based session printers.

NEW QUESTION # 22

Scenario: A Citrix Administrator needs to gather historical reporting statistics from the Virtual Delivery Agent (VDA) machines, as users are reporting latency and overall performance issues within their sessions. The administrator believes these issues are related to high CPU and memory usage. What can the administrator enable to gather this monitoring data from the VDA machines?

- **A. Resource Monitoring HDX policy in Citrix Studio**
- B. Trends > Sessions within Citrix Director
- C. Process Monitoring HDX policy in Citrix Studio
- D. Trends > Machine Usage within Citrix Director

Answer: A

Explanation:

Enabling the Resource Monitoring HDX policy allows collection of CPU and memory utilization data from VDA machines. This data is then sent to Citrix Director for historical reporting, helping administrators analyze performance issues such as latency caused by high resource usage.

NEW QUESTION # 23

A Citrix Administrator is creating a Pooled/Random catalog using Machine Creation Services (MCS). Which service on the Citrix Delivery Controller will enable the communication to the Hypervisor?

- A. Citrix Broker Service
- **B. Citrix Host Service**
- C. Citrix Environment Test Service
- D. Citrix Hypervisor Service

Answer: B

Explanation:

The Citrix Host Service on the Delivery Controller manages communication with the hypervisor. It enables Machine Creation Services (MCS) to provision, power manage, and update virtual machines in pooled or random catalogs.

NEW QUESTION # 24

Which disk type will always be created for each virtual machine, when creating new virtual machines using Machine Creation Services (MCS)?

- A. Full-clone base disk
- **B. Identity disk**

- C. Differencing (Diff) disk
- D. Personal vDisk

Answer: B
