

Easy to use Formats of PassExamDumps Palo Alto Networks SSE-Engineer Practice Exam Material

BTW, DOWNLOAD part of PassExamDumps SSE-Engineer dumps from Cloud Storage: https://drive.google.com/open?id=1_kcUrcG71OXto3SSBRuBxBsjfZr7kaPd

PassExamDumps SSE-Engineer products are honored by thousands, considerably recognized across the industry. Successful candidates preferably suggest our products as they provide the best possible returns for your invested money. Our professionals have devoted themselves to deliver the required level of efficiency for our customers. Our well-reputed industry highlights our tremendous success record and makes us an incomparable choice for SSE-Engineer Exams preparation. 100% guaranteed success for all SSE-Engineer exams is offered at PassExamDumps, marks a key difference with competing brands. Your investment with PassExamDumps never takes any downturn as we owe the whole responsibility for any kind of loss that occurs through your failure.

You can download our SSE-Engineer guide torrent immediately after you pay successfully. After you pay successfully, you will receive the mails sent by our system in 10-15 minutes. Then you can click on the links and log in and you will use our software to learn our SSE-Engineer prep torrent immediately. Not only our SSE-Engineer Test Prep provides the best learning for them but also the purchase is convenient because the learners can immediately learn our SSE-Engineer prep torrent after the purchase. So the using and the purchase are very fast and convenient for the learners.

Valid SSE-Engineer Exam Vce | SSE-Engineer Valid Braindumps

To pass the Palo Alto Networks Security Service Edge Engineer (SSE-Engineer) certification exam, you need to prepare well with the help of top-notch SSE-Engineer exam questions which you can download from the PassExamDumps platform. On this platform, you will get valid, updated, and real PassExamDumps SSE-Engineer Dumps for quick exam preparation.

Palo Alto Networks Security Service Edge Engineer Sample Questions (Q40-Q45):

NEW QUESTION # 40

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

- * The solution must meet these requirements:
- * The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.
- * The branch locations must have internet filtering and data center connectivity.
- * The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.
- * The security team must have access to manage the mobile user and access to branch locations.
- * The network team must have access to manage only the partner access.

Which two components can be provisioned to enable data center connectivity over the internet? (Choose two.)

- **A. Service connections**
- **B. Colo-Connect**
- C. SD-WAN Connector
- D. ZTNA Connector

Answer: A,B

Explanation:

Service connections enable secure connectivity between Prisma Access and on-premises data centers, allowing mobile users and branch locations to access internal applications. They facilitate seamless integration of internal networks with Prisma Access while maintaining security policies. Colo-Connect provides a dedicated and optimized pathway for traffic between Prisma Access and data centers, ensuring stable performance and reduced latency over the internet. Both components together support secure and efficient data center connectivity while aligning with the customer's access control and filtering requirements.

NEW QUESTION # 41

An intern is tasked with changing the Anti-Spyware Profile used for security rules defined in the GlobalProtect folder. All security rules are using the Default Prisma Profile. The intern reports that the options are greyed out and cannot be modified when selecting the Default Prisma Profile.

Based on the image below, which action will allow the intern to make the required modifications?

- **A. Create a new profile, because default profile groups cannot be modified.**
- B. Change the configuration scope to Prisma Access and modify the profile group.
- C. Modify the existing anti-spyware profile, because best-practice profiles cannot be removed from a group.
- D. Request edit access for the GlobalProtect scope.

Answer: A

Explanation:

Palo Alto Networks best practices and the behavior of Strata Cloud Manager (SCM) dictate that predefined or default objects, including profile groups like "Default Prisma Profile," cannot be directly modified.

These default objects serve as baseline configurations and are often locked to prevent accidental or unintended changes that could impact the overall security posture.

The intern's experience of the options being greyed out when selecting "Default Prisma Profile" is a direct indication of this immutability of default objects.

Therefore, the correct action is to:

* Create a new Profile Group: The intern should create a new profile group within the appropriate configuration scope (likely GlobalProtect, given the task).

* Configure the new Profile Group: In this new profile group, the intern can select the desired Anti-Spyware Profile (which might be an existing custom profile or a new one they create).

* Modify Security Rules: The security rules currently using the "Default Prisma Profile" in the GlobalProtect folder need to be modified to use this newly created profile group.

Let's analyze why the other options are incorrect based on official documentation:

* A. Request edit access for the GlobalProtect scope. While having the correct scope permissions is necessary for making any changes within GlobalProtect, it will not override the inherent immutability of default objects like "Default Prisma Profile." Edit access will allow the intern to create new objects and modify rules, but not directly edit the default profile group.

* B. Change the configuration scope to Prisma Access and modify the profile group. The image shows that "Default Prisma Profile" has a "Location" of "Prisma Access." However, even within the Prisma Access scope, default profile groups are generally not directly editable. The issue is not the scope but the fact that it's a default object.

* D. Modify the existing anti-spyware profile, because best-practice profiles cannot be removed from a group. The question is about changing the profile group, not the individual Anti-Spyware Profile. While "best-practice" profiles might be part of default groups, the core issue is the inability to modify the default group itself. Creating a new group allows the intern to choose which Anti-Spyware

Profile to include.

In summary, the fundamental principle in Palo Alto Networks management is that default objects are typically read-only to ensure a consistent and predictable baseline. To make changes, you need to create custom objects.

NEW QUESTION # 42

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

Which two options will allow the engineer to support the requirements? (Choose two.)

- **A. Enable eBGP for dynamic routing and configure RemoteNetworks.**
- B. Configure the CPE with Static Routes pointing to Prisma Access Infrastructure and Mobile User routes.
- C. Enable Remote Networks Advertise Default Route.
- **D. Configure Remote Networks and define the branch IP subnets using Static Routes.**

Answer: A,D

Explanation:

Enabling eBGP for dynamic routing and configuring Remote Networks ensures seamless connectivity between branch locations, mobile users, and the data center. eBGP allows Prisma Access to dynamically exchange routes with the Customer Premises Equipment (CPE), optimizing path selection without requiring manual updates. Configuring Remote Networks and defining branch IP subnets using static routes ensures controlled and segmented routing, aligning with security policies. This setup provides proper internet filtering, data center connectivity, and restricted access for B2B partners while keeping management responsibilities aligned.

NEW QUESTION # 43

When a review of devices discovered by IoT Security reveals network routers appearing multiple times with different IP addresses, which configuration will address the issue by showing only unique devices?

- **A. Merge individual devices into a single device with multiple interfaces.**
- B. Delete all duplicate devices, keeping only those discovered using their management IP addresses.
- C. Add the duplicate entries to the ignore list in IoT Security.
- D. Create a custom role to merge devices with the same hostname and operating system.

Answer: A

Explanation:

When network routers appear multiple times with different IP addresses in IoT Security, it is likely because they have multiple interfaces with separate IPs. Merging these entries into a single device with multiple interfaces ensures that the system correctly identifies each router as a unique entity while maintaining visibility across all its interfaces. This approach prevents unnecessary duplicates, improves asset management, and enhances security monitoring.

NEW QUESTION # 44

Which statement is valid in relation to certificates used for GlobalProtect and pre-logon?

- **A. Certificates must be deployed in the Machine Certificate Store.**
- B. The GlobalProtect agent may be used to distribute pre-logon certificates.
- C. The certificate used for pre-logon must include both Subject and Subject-Alt fields.
- D. A public certificate authority (CA) must sign and validate all certificates used.

Answer: A
