According to our survey, those who have passed the ACA-100 Exam with our ACA-100 test guide convincingly demonstrate their abilities of high quality, raise their professional profile, expand their network and impress prospective employers.

Appian Certified Analyst Sample Questions (Q31-Q36):

NEW QUESTION # 31

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Acceptance criteria
- B. Business value
- C. Test Script
- D. Estimation of effort to develop

Answer: A

Explanation:

When translating a user requirement into a user story, it is essential to include acceptance criteria to ensure that the desired functionality will be delivered as expected. Acceptance criteria provide clear, testable conditions that define when a user story is complete and meets the requirement. This ensures that the development team has a clear understanding of what needs to be built and how it will be validated, reducing the risk of miscommunication and ensuring the final product aligns with the user's needs. Appian Documentation - Writing Effective User Stories Note: While business value (B) and estimation of effort (A) are important elements of a user story, they do not directly ensure that the functionality will meet the requirement. The test script (C) is typically created after the user story is developed.

NEW QUESTION # 32

A customer wants to automate a workflow for completing customer service cases. The high-level workflow involves multiple rounds of recording investigation results, uploading related documents, sending communications, and approving. Activities may need to be done at any time or out of order.

Which recommendation best utilizes the strengths of Appian out-of-the-box features to address this use case?

- A. A dashboard showing the user's cases with associated actions.
- B. A report showing the user's cases with associated actions.
- C. A records-centric design using related actions for the various activities.
- D. A sequential workflow of process tasks.

Answer: C

Explanation:

A records-centric design is the best approach to address this use case in Appian. This design allows users to interact with data through a central record type, with related actions enabling them to perform tasks like uploading documents, sending communications, and approving cases at any time or out of order.

Records-Centric Design:

This approach centralizes all related data and actions around a specific record type.

Users can trigger related actions such as document uploads or approvals directly from the record, ensuring flexibility and a user-friendly interface.

Why Not Other Options?:

A and B. Reports and dashboards are useful for visualizing data but are not as flexible for handling the ad-hoc and out-of-order activities described.

C . A sequential workflow is too rigid for a process where tasks need to be done out of order.

References:

Appian Documentation on Records: Records in Appian

Appian Community Success Guide: Designing Record-Centric Applications

A records-centric approach leverages Appian's strengths, providing a flexible and intuitive solution for complex workflows.

NEW QUESTION # 33

Which Appian gateway node can only trigger a single outgoing path?

- A. AND
- B. COMPLEX
- C. XOR
- D. OR

Answer: C

Explanation:

The XOR (Exclusive OR) gateway in Appian can only trigger a single outgoing path based on the evaluation of conditions. It allows for one path to be taken out of multiple possible paths, depending on which condition is met first. This makes it suitable for scenarios

where only one outcome can occur based on a set of criteria. Appian Documentation - BPMN Gateways Note: The other gateways (OR, COMPLEX, AND) can trigger multiple outgoing paths, making XOR the correct choice when only one path is to be followed.

NEW QUESTION # 34

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Product Owner
- B. Appian Analyst
- C. Sponsor
- D. Scrum Master

Answer: A

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

References:

Appian Community Success Guide: Roles in Agile Teams

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 35

Which BPMN notation type is used to reflect the roles and associated activities within a Process Model diagram?

- A. Sub-Process
- B. Swimlane
- C. Sequence Flow
- D. Task

Answer: B

Explanation:

In BPMN (Business Process Model and Notation), a swimlane is used to represent roles and their associated activities within a process model diagram. Each swimlane represents a different role or department, and the tasks or activities performed by that role are placed within the corresponding swimlane. This visual distinction helps in understanding who is responsible for which parts of the process.

Swimlane Overview:

Swimlanes are horizontal or vertical sections within a process model diagram.

Each lane is labeled with the name of the role, department, or entity that is responsible for the activities within that lane.

The activities (tasks, events, gateways) are placed within the appropriate swimlane to show which role is performing each action. Why Not Other Options?:

A . Task: Represents a single unit of work or activity but does not indicate the role responsible for it.

C . Sequence Flow: Represents the order of activities but does not relate to roles or responsibilities.

D . Sub-Process: Represents a group of related tasks but, again, does not indicate which role is responsible for the activities.

References:

Appian Documentation on Process Modeling: Process Models

Swimlanes are essential for clarifying responsibilities in a process, making it easier for stakeholders to understand and manage the process.

NEW QUESTION # 36

.....

We strongly recommend using our Appian Certified Analyst (ACA-100) exam dumps to prepare for the Appian ACA-100 certification. It is the best way to ensure success. With our AppianACA-100 practice questions, you can get the most out of your studying and maximize your chances of passing your Appian ACA-100 Exam. Actual4Cert Appian ACA-100 practice test Actual4Cert is the answer if you want to score higher in the ACA-100 exam and achieve your academic goals.
