Salesforce Certified Data Architect is an advanced-level certification that validates a professional's knowledge and skills in designing and implementing data architecture solutions in the Salesforce platform. Salesforce Certified Data Architect certification is intended for individuals who have extensive experience in data modeling, database design, data integration, and data governance. It also requires a deep understanding of the Salesforce data architecture, including the platform's data model, data storage options, data security, and data management features.

### Salesforce Certified Data Architect Sample Questions (Q179-Q184):

#### NEW QUESTION # 179

NTO has implemented salesforce for its sales users. The opportunity management in salesforce is implemented as follows:

1. Sales users enter their opportunities in salesforce for forecasting and reporting purposes.
2. NTO has a product pricing system (PPS) that is used to update opportunity amount field on opportunities on a daily basis.
3. PPS is the trusted source within the NTO for opportunity amount.
4. NTO uses opportunity forecast for its sales planning and management.

Sales users have noticed that their updates to the opportunity amount field are overwritten when PPS updates their opportunities. How should a data architect address this overriding issue?

- A. Change PPS integration to update only opportunity amount fields when values is NULL.
- B. Create a custom field for opportunity amount that sales users update separating the fields that PPS updates.
- **C. Change opportunity amount field access to read only for sales users using field level security.**
- D. Create a custom field for opportunity amount that PPS updates separating the field that sales user updates.

**Answer: C**

#### NEW QUESTION # 180

An Architect needs to document the data architecture for a multi-system, enterprise Salesforce implementation. Which two key artifacts should the Architect use? (Choose two.)

- A. User stories
- **B. Data model**
- C. Non-functional requirements
- **D. Integration specification**

**Answer: B,D**

#### NEW QUESTION # 181

A large automobile company has implemented Salesforce for its sales associates. Leads flow from its website to Salesforce using a batch integration in Salesforce. The batch job converts the leads to Accounts in Salesforce. Customers visiting their retail stores are also created in Salesforce as Accounts.

The company has noticed a large number of duplicate Accounts in Salesforce. On analysis, it was found that certain customers could interact with its website and also visit the store. The sales associates use Global Search to search for customers in Salesforce before they create the customers.

Which option should a data architect choose to implement to avoid duplicates?

- A. Build a custom search functionality that allows sales associates to search for customer in real time upon visiting their retail stores.
- B. Implement an MDM solution to validate the customer information before creating Salesforce.
- C. Develop an Apex class that searches for duplicates and removes them nightly.
- **D. leverage duplicate rules in Salesforce to validate duplicates during the account creation process.**

**Answer: D**

**NEW QUESTION # 182**

UC is trying to switch from legacy CRM to salesforce and wants to keep legacy CRM and salesforce in place till all the functionality is deployed in salesforce. The want to keep data in synch b/w Salesforce, legacy CRM and SAP. What is the recommendation.

- A. Integrate legacy CRM to salesforce and keep data in synch till new functionality is in place
- **B. Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce**
- C. Do not integrate legacy CRM to Salesforce, but integrate salesforce to SAP
- **D. Suggest MDM solution and link MDM to salesforce and SAP**

**Answer: B,D**

**NEW QUESTION # 183**

Universal Containers (UC) has implemented Sales Cloud and it has been noticed that Sales reps are not entering enough data to run insightful reports and dashboards. UC executives would like to monitor and measure data quality metrics. What solution addresses this requirement?

- A. Generate reports to view the quality of sample data.
- B. Use custom objects and fields to calculate data quality.
- **C. Use third-party AppExchange tools to monitor and measure data quality.**
- D. Export the data to an enterprise data warehouse and use BI tools for data quality.

**Answer: C**

Explanation:

Using third-party AppExchange tools to monitor and measure data quality can address the requirement of UC executives by providing features such as data cleansing, deduplication, validation, enrichment, and scoring. These tools can help improve the accuracy, completeness, and consistency of the data entered by sales reps .
