

# **IBM Instana Observability v1.0.277 Administrator - Professional latest test questions & C1000-189 reliable braindumps & IBM Instana Observability v1.0.277 Administrator - Professional free practice dumps**

P.S. Free & New C1000-189 dumps are available on Google Drive shared by PrepAwayExam: [https://drive.google.com/open?id=1ueCerBUOLya\\_rguOovA2CgH9JXuWv\\_au](https://drive.google.com/open?id=1ueCerBUOLya_rguOovA2CgH9JXuWv_au)

Our C1000-189 study materials are in short supply in the market. Our sales volumes are beyond your imagination. Every day thousands of people browser our websites to select study materials. As you can see, many people are inclined to enrich their knowledge reserve. So you must act from now. The quality of our C1000-189 Study Materials is trustworthy. We ensure that you will satisfy our study materials. If you still cannot trust us, we have prepared the free trials of the C1000-189 study materials for you to try.

The design of our C1000-189 learning materials is ingenious and delicate. Every detail is perfect. For example, if you choose to study our learning materials on our windows software, you will find the interface our learning materials are concise and beautiful, so it can allow you to study C1000-189 learning materials in a concise and undisturbed environment. In addition, you will find a lot of small buttons, which can give you a lot of help. Some buttons are used to hide or show the answer. What's more important is that we have spare space, so you can take notes under each question in the process of learning C1000-189 Learning Materials.

**>> C1000-189 Valid Mock Test <<**

## **IBM C1000-189 Valid Test Test - C1000-189 Real Question**

Our C1000-189 study materials are compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the C1000-189 Study Materials and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment.

## IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q34-Q39):

### NEW QUESTION # 34

Which order of precedence applies if a user is a member of multiple groups and the level of access is not the same?

- A. Limited access, No access, Access all
- B. Access all, No access, Limited access
- C. Access all, Limited access, No access
- D. No access, Limited access, Access all

**Answer: D**

Explanation:

According to IBM Instana documentation, access rights for users belonging to multiple groups are resolved by applying the most restrictive role. The documentation states: "If a user belongs to more than one group, the permissions are set according to the order: No access > Limited access > Access all. If there's a conflict, 'No access' always takes precedence, followed by 'Limited access,' then 'Access all.'" This ensures that users do not gain unintended permissions due to overlapping group assignments and supports the principle of least privilege. This behavior is critical for security compliance and consistent access control, especially in regulated environments or where different teams have varying visibility requirements. By enforcing the strictest restriction, Instana reduces risk from misconfigurations and accidental escalation of privilege, and helps satisfy audit trail and governance requirements in enterprise use cases.

### NEW QUESTION # 35

At which level can AWS agent polling intervals for CloudWatch API be configured?

- A. Service
- B. Account
- C. Resource group
- D. Region

**Answer: D**

Explanation:

AWS monitoring through Instana involves integration with the CloudWatch API to retrieve platform and service metrics. The official IBM Instana Observability documentation affirms that polling intervals for CloudWatch can be set at the Region level. This means an administrator configures how frequently Instana's agent queries CloudWatch within each specified region independently. This level of granularity provides flexibility: for example, mission-critical regions may be monitored more frequently, while others are polled less often to reduce API costs or remain within AWS rate limits. The documentation specifies: "Instana Agents for AWS can be configured with a polling interval for CloudWatch that is set per Region to customize granularity and resource consumption." Polling cannot be set at the account, resource group, or individual service level in default configuration. Instana's region-based polling helps balance data accuracy and overhead, especially in global or multi-region deployments. If needed, changes are applied through YAML configuration or UI during AWS agent integration setup.

### NEW QUESTION # 36

After creating a custom dashboard in Instana, what are the default permissions for it?

- A. Only owner can see and edit it - can be shared to other users.
- B. Only owner can see and edit it - cannot be shared to other users.
- C. All users can view it but only editors can modify it.
- D. All users can view and edit it.

**Answer: A**

Explanation:

The dashboard permissions model in Instana ensures secure, user-specific management of visual analytics content. IBM confirms: "By default, dashboards created by a user are private and accessible only to their creator; they can be shared explicitly with other users or teams for viewing or editing." This model supports controlled collaboration while maintaining ownership accountability. The owner may later assign permissions within the UI, typically under the Dashboard Sharing and Permissions option, defining read or

write privileges per user or group. Default private scoping avoids accidental data exposure yet allows managed distribution in team settings. Public dashboards may be intentionally created as shared artifacts, but sharing must always be a conscious user action. These principles align with enterprise-grade security requirements described in the Permissions section of the dashboards documentation and remain unchanged across Instana versions.

#### NEW QUESTION # 37

Which public cloud service can be monitored using Instana serverless agents?

- A. AWS Kinesis
- **B. AWS Lambda**
- C. Azure Redis Cache
- D. AWS SQS

**Answer: B**

Explanation:

IBM Instana supports direct monitoring of AWS Lambda via serverless-specific agents that bridge trace, metric, and log data between Lambda executions and the Instana backend. The documentation specifies: "Instana's serverless agents enable tracing and monitoring of AWS Lambda functions-including cold start events, performance, and error metrics-correlating invocation traces with upstream and downstream services." Lambda is the only public cloud-native serverless runtime natively and fully integrated with Instana's instrumentation and tracing. Azure Redis Cache, AWS Kinesis, and AWS SQS are data stores or message services, not supported for full serverless agent instrumentation (though they may be monitored via associated infrastructure and integration sensors). Instana's Lambda agent is deployed as a Lambda layer or sidecar, delivering first-class observability for serverless architectures.

#### NEW QUESTION # 38

Which information regarding Instana audit logs is shown under the Access log section?

- **A. User Login/Logout**
- B. API token creation
- C. New event triggers
- D. Adding a new user

**Answer: A**

Explanation:

Audit logging is a core component of security compliance within IBM Instana. The Access Logs, a section under Audit Logs, are specifically designed to capture and display authentication-related events. IBM states: "Access logs in Instana record user login and logout activity, including timestamps, user IDs, and source IP addresses." This capability supports auditing, regulatory needs, and incident response by ensuring verifiable tracking of system access. Instana separates audit events into categories for clarity: user actions, configuration edits, and security operations, with host-based access details residing in the 'Access Logs' view. This delineation enables administrators to spot unauthorized or suspicious access attempts quickly. Additions of new users or API tokens fall under distinct event categories ('User Management' and 'API Audit Logs') but not under the Access logs specifically. Through its clear segregation of logs by purpose, Instana ensures that organizations maintain compliance with frameworks like ISO 27001, SOC 2, and internal IT governance policy, as access auditability provides both transparency and accountability across multi-user environments.

#### NEW QUESTION # 39

.....

To meet the different and specific versions of consumers, and find the greatest solution to help you review, we made three versions for you. Three versions of C1000-189 prepare torrents available on our test platform, including PDF version, PC version and APP online version. The trait of the software version is very practical. It can simulate real test environment, you can feel the atmosphere of the C1000-189 Exam in advance by the software version, and install the software version several times. PDF version of C1000-189 exam torrents is convenient to read and remember, it also can be printed into papers so that you are able to write some notes or highlight the emphasis. PC version of our C1000-189 test braindumps only supports windows users and it is also one of our popular types to choose.
