

Prepare with updated ServiceNow CIS-Discovery dumps - Get up to one year of free updates

The screenshot displays two sections of the ServiceNow CIS-Discovery interface. The top section, 'Reconciliation Definitions', shows a table with three entries: Altiris, OpenView, and ServiceNow, all associated with the 'Windows Server [cmdb_ci_win_server]' data source. The bottom section, 'Data Source Precedents', shows a table with three entries: [cmdb_ci_win_server] for ServiceNow (order 100), [cmdb_ci_win_server] for OpenView (order 200), and [cmdb_ci_win_server] for Altiris (order 300).

Reconciliation Definitions				
	Data Source	Applies to	Attributes	Active
<input type="checkbox"/>	Altiris	Windows Server [cmdb_ci_win_server]	name	true
<input type="checkbox"/>	OpenView	Windows Server [cmdb_ci_win_server]	name	true
<input type="checkbox"/>	ServiceNow	Windows Server [cmdb_ci_win_server]	name	true

Data Source Precedents				
	Applies to	Data Source	Order	Active
<input type="checkbox"/>	[cmdb_ci_win_server]	ServiceNow	100	true
<input type="checkbox"/>	[cmdb_ci_win_server]	OpenView	200	true
<input type="checkbox"/>	[cmdb_ci_win_server]	Altiris	300	true

ServiceNow Cheap CIS-Discovery Dumps offer you accurate Latest Exam Cost to pass Certified Implementation Specialist - Discovery exam

Up to now, we have successfully issued three packages for you to choose. They are PDF version, online test engines and windows software of the CIS-Discovery practice prep. The three packages can guarantee you to pass the exam for the first time. Though the content is the same with all versions of the CIS-Discovery Study Materials, the displays are totally different. And every display has its advantage to cater to different people according to their interest and hobbies. You may choose the right version of our CIS-

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which of the following properties define the maximum overall size for the returned payload that comes from patterns?

- A. cmdb.properties.payload_max_size
- B. mid.discovery.max_payload_size
- C. glide.discovery.payload_max
- D. mid.discovery.max_pattern_payload_size

Answer: D

Explanation:

The mid.discovery.max_pattern_payload_size property defines the maximum overall size for the returned payload that comes from patterns. This property is set on the MID Server and applies to all patterns that run on that MID Server. If the payload size exceeds this limit, the pattern execution fails and an error message is logged in the ECC queue. The default value of this property is 10 MB1. 1: ServiceNow Docs - MID Server properties for Discovery and Service Mapping 2: ServiceNow Docs - Discovery payload size and processing

NEW QUESTION # 24

Which of the following must be configured to allow a MID Server to access servers using WinRM? (Choose two.)

- A. MID Servers must be configured as a trusted source with DNS
- B. JEA Properties set to True
- C. MID Server Parameters Add WinRM
- D. MID Servers need to be added to the WinRM Group policy on the Servers

Answer: C,D

Explanation:

To allow a MID Server to access servers using WinRM, the following configurations are required:

* MID Servers need to be added to the WinRM Group policy on the Servers: This enables the servers to accept WinRM connections from the MID Servers and grant them the necessary permissions to execute commands and scripts1.

* MID Server Parameters Add WinRM: This enables the MID Server to use WinRM as a protocol for Discovery and Orchestration and specify the WinRM port, authentication method, and encryption settings2.

:

Configure Windows servers for WinRM

MID Server Parameters Add WinRM

NEW QUESTION # 25

Which of the below is NOT a level of the IT Operations Management (ITOM) Product Suite?

Response:

- A. Corporate
- B. Enterprise
- C. Standard
- D. Professional

Answer: A

NEW QUESTION # 26

Based on the following images, which choice best describes what occurs if Discovery sets the name attribute of a discovered Windows Server CI to 'Windows1' and then Altiris discovery runs detecting 'Windows2' for the name attribute on the same CI?

- A. The name of the CI changes to 'Windows2'.
- B. The CI is not discovered because Discovery is not listed in either image.
- C. The name of the CI stays 'Windows1'.
- D. The name of the CI does not populate with either discovery.

Answer: A

NEW QUESTION # 27

Which of the following best describes the relationship between the Tomcat [cmdb_ci_app_server_tomcat] table and the Application Server [cmdb_ci_app_server] table? (Choose two.)

- A. Tomcat table is a child of the Application Server table
- B. Tomcat table is a parent of the Application Server table The mid.discovery.max_payload_size property defines the maximum overall size for the returned payload that comes from patterns. This property is set on the MID Server and applies to all patterns that run on that MID Server. If the payload size exceeds this limit, the pattern execution fails and an error message is logged in the ECC queue. The default value of this property is 10 MB1.
References: 1: ServiceNow Docs - MID Server properties for Discovery and Service Mapping 2: ServiceNow Docs - Discovery payload size and processing
- C. Tomcat does not extend the Application Server table
- D. Tomcat table extends the Application Server table

Answer: A,C

Explanation:

To create a custom horizontal pattern to discover an operating system that is not discovered by the base installation patterns, the following steps are necessary1:

* Select a CI Type: This defines the type of configuration item (CI) that the pattern will discover and create or update in the CMDB. For an operating system, the CI Type should be Operating System or a subtype of it.

* Select Infrastructure Pattern Type: This defines the type of pattern that will be used to discover the CI. For an operating system, the Infrastructure Pattern Type should be Operating System or a subtype of it.

* Define the pattern logic: This consists of adding operations, variables, and conditions to the pattern to specify how the discovery process will identify and classify the operating system. For example, the pattern can use probes and sensors to query the target device for information such as name, version, vendor, etc.

* Test and publish the pattern: This involves verifying that the pattern works as expected and does not cause any errors or conflicts with other patterns. Once the pattern is tested, it can be published and activated for discovery.
