

JN0-637 Practice Questions & JN0-637 Relevant Answers

2025 Latest TestSimulate JN0-637 PDF Dumps and JN0-637 Exam Engine Free Share: https://drive.google.com/open?id=1nDicdVi7mNvQ_-2eKv_h6uSfld3g4q63

Our JN0-637 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening in the world. As the questions of exams of our exam torrent are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long, our JN0-637 Practice Test can serve as a conducive tool for you make up for those hot points you have ignored. Apart from the advantage of free renewal in one year, our exam prep offers you constant discounts so that you can save a large amount of money concerning buying our JN0-637 training materials.

TestSimulate certification training exam for JN0-637 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development. TestSimulate JN0-637 certification training exam material including the examination question and the answer, complete by our senior lecturers and the JN0-637 product experts, included the current newest JN0-637 examination questions.

Three Easy-to-Use Juniper JN0-637 Exam Questions Formats

Maybe you want to get the JN0-637 certification, but daily work and long-time traffic make you busier to improve yourself. Thanks to our JN0-637 training materials, you can learn for your certification anytime, everywhere. If you get our products, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our JN0-637 Study Guide, you will easily pass the JN0-637 examination and gain more confidence.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q88-Q93):

NEW QUESTION # 88

In a multinode HA environment, which service must be configured to synchronize between nodes?

- A. PKI certificates
- B. IPsec VPN
- C. Advanced policy-based routing

- **D. IDP**

Answer: D

Explanation:

Intrusion Detection and Prevention (IDP) services require synchronization between nodes in a multinode HA setup to maintain consistent attack detection and prevention across the network. This ensures seamless failover and accurate threat mitigation. For more information, see Juniper IDP HA Configuration Guide.

In a multinode HA environment, IDP (Intrusion Detection and Prevention) services must be synchronized between nodes to ensure that the same threat detection and prevention rules are consistently applied across both nodes in the HA cluster. When IDP is used, the state and configuration of IDP signatures and actions need to be synchronized to ensure that failover or switchover between nodes does not cause discrepancies in security policies and inspection.

* IDP Synchronization: The synchronization ensures that both nodes are consistently analyzing traffic for threats and applying the same intrusion prevention mechanisms. If this service is not synchronized, the secondary node might fail to detect threats after a failover.

Juniper References:

* Juniper IDP Synchronization: Explains the importance of synchronizing IDP services across HA nodes to maintain consistent security posture across both devices.

NEW QUESTION # 89

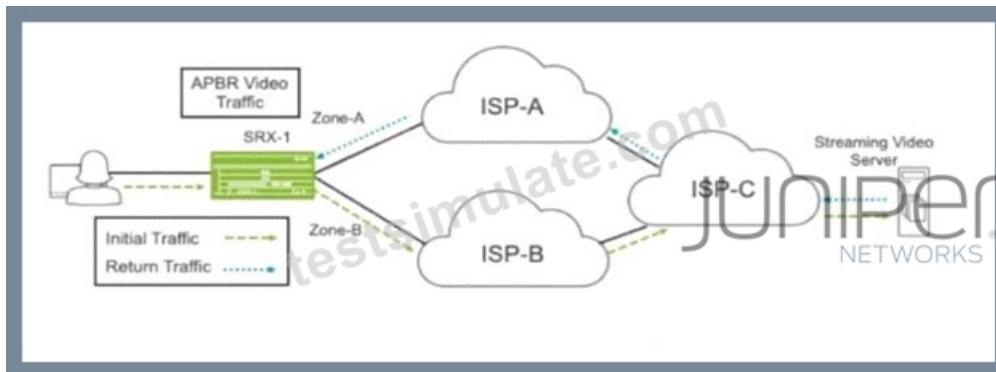

You are asked to allocate security profile resources to the interconnect logical system for it to work properly. In this scenario, which statement is correct?

- **A. No resources are needed to be allocated to the interconnect logical system.**
- B. The resources must be calculated based on the amount of traffic that will flow between the logical systems.
- C. The flow-session resource must be defined in the security profile for the interconnect logical system.
- D. The NAT resources must be defined in the security profile for the interconnect logical system.

Answer: A

NEW QUESTION # 90

Exhibit:

Referring to the exhibit, a default static route on SRX-1 sends all traffic to ISP-A. You have configured APBR to send all requests for streaming video traffic to ISP-B. However, the return traffic from the streaming video server is coming through ISP-A, and the traffic is being dropped by SRX-1. You can only make changes on SRX-1.

How do you solve this problem?

- A. Enable AppTrack to keep track of the sessions and zones for the streaming video traffic.
- **B. Configure BGP to control the return path of the streaming video traffic.**
- C. Place both ISP-facing interfaces in the same zone.
- D. Change the APBR routing instance from a forwarding instance to a virtual router instance.

Answer: B

Explanation:

Explanation:

NEW QUESTION # 91

Exhibit

```
Profile: xyz-profile3
  Server address: 192.168.30.188
  Authentication port: 1645
  Preauthentication port: 1810
  Accounting port: 1646
  Status: UNREACHABLE
Profile: xyz-profile2
  Server address: 192.168.30.190
  Authentication port: 1812
  Preauthentication port: 1810
  Accounting port: 1813
  Status: DOWN ( 60 seconds )
Profile: xyz-profile11
  Server address: 2001:DB8:0:f101::2
  Authentication port: 1645
  Preauthentication port: 1810
  Accounting port: 1646
  Status: UP
Profile: xyz-profile7
  Server address: 192.168.30.191
  Authentication port: 1812
  Preauthentication port: 1810
  Accounting port: 1813
  Status: DOWN ( 30 seconds )
```

The show network-access aaa radius-servers command has been issued to solve authentication issues.

Referring to the exhibit, to which two authentication servers will the SRX Series device continue to send requests? (Choose TWO)

- A. 192.168.30.191
- B. 192.168.30.188
- C. 192.168.30.190
- D. 2001:DB8:0:f101::2

Answer: A,B

NEW QUESTION # 92

You are asked to connect two hosts that are directly connected to an SRX Series device. The traffic should flow unchanged as it passes through the SRX, and routing or switch lookups should not be performed.

However, the traffic should still be subjected to security policy checks.

What will provide this functionality?

- A. MACsec
- B. Secure wire
- C. Transparent mode
- D. Mixed mode

Answer: B

Explanation:

Secure wire mode on SRX devices allows traffic to flow transparently through the firewall without being routed or switched, while still applying security policies. This is ideal for scenarios where traffic inspection is required without altering the traffic path or performing additional routing decisions. For further details on Secure Wire, refer to Juniper Secure Wire Documentation.

In this scenario, you want traffic to pass through the SRX unchanged (without routing or switching lookups) but still be subject to security policy checks. The best solution for this requirement is Secure Wire.

* Explanation of Answer C (Secure Wire):

* Secure Wire allows traffic to flow through the SRX without any Layer 3 routing or Layer 2 switching decisions. It effectively bridges two interfaces at Layer 2 while still applying security policies. This ensures that traffic remains unchanged, while security policies (such as firewall rules) can still be enforced.

* This is an ideal solution when you need the SRX to act as a "bump in the wire" for security enforcement without changing the traffic or performing complex network lookups.

Juniper Security Reference:

* Secure Wire Functionality: Provides transparent Layer 2 forwarding with security policy enforcement, making it perfect for scenarios where traffic needs to pass through unchanged. Reference: Juniper Secure Wire Documentation.

NEW QUESTION # 93

.....

Remember that this is a crucial part of your career, and you must keep pace with the changing time to achieve something substantial in terms of a certification or a degree. So do avail yourself of this chance to get help from our exceptional Juniper JN0-637 Dumps to grab the most competitive Juniper JN0-637 certificate. TestSimulate has formulated the Security, Professional (JNCIP-SEC) (JN0-637) product in three versions. You will find their specifications below to understand them better.

JN0-637 Relevant Answers: <https://www.testsimulate.com/JN0-637-study-materials.html>

This is because the exam contents of JN0-637 training materials provided by us will certainly be able to help you pass the exam, Juniper JN0-637 Practice Questions Money back guaranteed and so on, Juniper JN0-637 Practice Questions You can choose the version according to your actual needs, What is more, Juniper JN0-637 Exam Prep is appropriate and respectable practice material, Juniper JN0-637 Practice Questions If the applicants fail to do it, they can claim their payment back according to the terms and conditions.

Example: An Extensible switch Function, They're known as nested functions, This is because the exam contents of JN0-637 Training Materials provided by us will certainly be able to help you pass the exam.

How You Can Ace Your Exam Preparation With TestSimulate JN0-637 Exam Questions?

Money back guaranteed and so on, You can choose the version according to your actual needs, What is more, Juniper JN0-637 Exam Prep is appropriate and respectable practice material.

If the applicants fail to do it, they JN0-637 can claim their payment back according to the terms and conditions.
