Latest C_ACDET_2506 Test Labs, C_ACDET_2506 Latest Test Preparation

The C_ACDET_2506 Mock Exams not just give you a chance to self-access before you actually sit for the certification exam, but

also help you get an idea of the SAP exam structure. It is well known that students who do a mock version of an exam benefit from it immensely. Some SAP certified experts even say that it can be a more beneficial way to prepare for the SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite exam than spending the same amount of time studying.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 2	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 3	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q35-Q40):

NEW QUESTION # 35
When performing migration to production for a greenfield customer, which item needs to be made available in production prior to creating the migration in ICM?

- A. Locations
- B. Approval Rules
- C. Users
- D. Translations

Answer: C

NEW QUESTION # 36
A Migration is performed for a Greenfield deployment to production, and the status of the Template configuration type indicates that it Failed. What actions do you take to make the failed template(s) available in production?

- A. Import the template in production
- B. Request SAP intervention
- C. The template must always be rebuilt in production
- D. Import the missing data in production and then import the template in production

Answer: D

NEW QUESTION # 37

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Push
- B. Deploy
- C. Move
- D. Migrate

Answer: B

NEW QUESTION # 38

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Enable field property "Use relationship chooser" in the Advanced tab
- B. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab
- C. Load Relation types and Relation entries
- D. Enable field property "Enable for Template Field Setter" in the Advanced tab
- E. Define a Visibility Condition in the Conditions tab

Answer: B

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, youpopulate the
"Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.
Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering.
This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.

NEW QUESTION # 39

What does the "?" represent in the Ariba expression below?
HierarchicalType=="SubAgreement" ? false : true

- A. if
- B. else
- C. then
- D. replace

Answer: C

Explanation:

The"?" symbol in Ariba expressions functions as the equivalent of "then" in conditional logic. The expression is a shorthand form of a ternary operator common in programming:
* The condition HierarchicalType=="SubAgreement" is evaluated first.
* Iftrue, the expression returns the value immediately after the "?" - in this case,false.
* The ":" symbol separates the "then" and "else" parts, so if the condition is false, the expression returns the value after the colon - true.Hence, "?" corresponds to the "then" clause of the if-then-else logic, making option C the correct answer.This syntax allows concise inline conditionals within Ariba's expression language.

NEW QUESTION # 40
