- A. Assign a permission to a field for each status (pre-approved, approved and closed).**
- B. Add the operators for each permission block.**
- C. Define the permissions in the Role-Based Permissions section in the Admin Center.
- D. Set the permissions to write or read for each field.**
- E. Permission the J role for each field.

Answer: A,B,D

Explanation:

In SAP SuccessFactors Recruiting, defining permissions for job requisition fields involves several key steps to ensure that the right users have the necessary read or write access for each field:

* Assign Permission for Each Status (Option A): Different statuses in the requisition lifecycle (pre-approved, approved, and closed) may require distinct permissions for fields.

* Add Operators for Each Permission Block (Option B): Define operators (e.g., recruiter, hiring manager) for each permission block, determining who can view or edit fields.

* Set Write or Read Permissions (Option D): Specify the level of access—either read or write—for each field based on the roles and statuses.

: SAP SuccessFactors Recruiting Management Data Model Guide - Field Permissions and Role Configurations.

Explanation of Incorrect Options:

Option C - Permission the J role: Permissions are assigned by field and operator, not a single role.

Option E - Role-Based Permissions in Admin Center: Job requisition field permissions are typically configured within the Job Requisition Data Model XML, not directly in Role-Based Permissions.
