Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.
Topic 2	<ul style="list-style-type: none">• Cloud Applications: This section of the exam measures skills of Salesforce Consultant and covers the standard Salesforce capabilities that support sales and service operations. It includes features such as products, price books, schedules, orders, quotes, and the tools that help with forecasting and territory management. The section also describes how to create Salesforce Knowledge articles, manage entitlements, support service workflows, and enable interactions through chat, case feed, Omni-Channel, console apps, and Experience Cloud sites. It also introduces the broader Salesforce suite that extends core platform functionality.

Topic 3	<ul style="list-style-type: none"> • Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
Topic 4	<ul style="list-style-type: none"> • Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.
Topic 5	<ul style="list-style-type: none"> • Objects and Applications: This section of the exam measures the skills of a Salesforce Business Analyst and covers selecting appropriate object and application-level solutions to meet business needs. It focuses on identifying when to use master-detail relationships, lookups, junction objects, related lists, record types, Schema Builder, and Object Creator. The section also includes improving UI and user experience using App Manager, Lightning App Builder, Dynamic Forms, standard Lightning components, console apps, and tools like the Lightning page analyze button.
Topic 6	<ul style="list-style-type: none"> • Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.

Plat-Admn-301 Reliable Dumps Ppt & Plat-Admn-301 Exams Dumps

Don't you want to make a splendid achievement in your career? Certainly hope so. Then it is necessary to constantly improve yourself. Working in the Salesforce industry, what should you do to improve yourself? In fact, it is a good method to improve yourself by taking Salesforce certification exams and getting Salesforce certificate. Salesforce certificate is very important certificate, so more and more people choose to attend Plat-Admn-301 Certification Exam.

Salesforce Certified Platform Administrator II Sample Questions (Q105-Q110):

NEW QUESTION # 105

An administrator is creating a custom Opportunity record page for Sales users for new logo opportunities. They need to control what fields display on the record when a sales user is viewing the opportunity. Where should the administrator edit what fields display in the details of the record page?

- A. Custom Lightning Component
- **B. Page Layout**
- C. Record Types
- D. Record Detail Component

Answer: B

Explanation:

The fields that display in the details of the record page are controlled by the page layout assigned to the user's profile and record type. The administrator can edit the page layout to add, remove, or reorder fields on the record page. References:
https://help.salesforce.com/s/articleView?id=sf.customize_layouts.htm&type=5

NEW QUESTION # 106

Users report that the industry picklist field is no longer visible on account records. What test can an administrator use to troubleshoot the issue?

- A. Debug log
- B. Field audit history
- **C. Setup audit trail**
- D. Field history tracking

Answer: C

Explanation:

The setup audit trail tracks the recent setup changes that you and other administrators have made to your org.

It can help you troubleshoot issues by showing you what changes were made, who made them, and when. In this case, the setup audit trail can help the administrator identify if someone changed the field-level security, page layout, or profile settings for the industry picklist field. References: <https://help.salesforce.com/s/articleView?id=sf.monitorsetup.htm&type=5>

NEW QUESTION # 107

The AW Computing administrator team does significant amounts of work around process automation and ensuring data integrity. When an administrator created a new validation rule in production, the development team complained that their deployment to production failed.

What should be implemented to prevent this conflict from happening?

- A. Build automation and validation rules using screen flows.
- B. Refresh the full copy sandbox daily.
- **C. Test changes in a shared sandbox.**
- D. Review the setup audit trail prior to changes.

Answer: C

Explanation:

A sandbox is a copy of a production org that can be used for development, testing, or training purposes.

Sandboxes allow administrators to make changes and test them without affecting the live production org. A shared sandbox is a type of sandbox that can be used by multiple users or teams to collaborate on development or testing projects. By testing changes in a shared sandbox, the AW Computing administrator team can avoid conflicts and errors when deploying changes to production.

NEW QUESTION # 108

An administrator has a request to write a report listing accounts that have sales from this year and that have a completed activity in the last 30 days.

What reporting feature should the administrator employ to provide only the list of accounts, without listing the details of the opportunities?

- **A. Cross-Filter**
- B. Filter Logic
- C. Joined Report
- D. Summary Report

Answer: A

Explanation:

A cross-filter lets you filter records based on related objects and their fields. For example, you can filter accounts that have at least one opportunity from this year and at least one completed activity in the last 30 days. References:

https://help.salesforce.com/s/articleView?id=sf.reports_cross_filters.htm&type=5

NEW QUESTION # 109

The administrator at Cloud Kicks made new fields and page layout adjustments based on new requirements from the service team. The changes have been built in a sandbox and are ready to be deployed into production. What should an administrator do before deploying the change set in production?

- A. Create the fields and update the page layouts in production.
- B. Request a new sandbox based on the sandbox where the changes were made.
- C. Make a new sandbox based on production to restore changes from.
- **D. Push the change set to another sandbox to restore from.**

Answer: D

Explanation:

change sets are tools that allow administrators to move customizations from one Salesforce org to another.

However, change sets do not track dependencies or conflicts between components in different orgs, so administrators need to manually verify that all required components are included in the change set and that they do not overwrite existing customizations in the target org. To avoid losing changes in production due to deploying an incomplete or incorrect change set, administrators should push the change set to another sandbox first and test it there before deploying it to production.
