Latest New HPE7-A06 Test Question & Passing HPE7-A06 Exam is No More a Challenging Task

Just like the old saying goes, there is no royal road to success, and only those who do not dread the fatiguing climb of gaining its numinous summits. In a similar way, there is no smoothly paved road to the HPE7-A06 certification. You have to work on it and get started from now. If you want to gain the related certification, it is very necessary that you are bound to spend some time on carefully preparing for the HPE7-A06 Exam, including choosing the convenient and practical study materials, sticking to study and keep an

optimistic attitude and so on.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

Refer to the exhibit.

□ Review the diagram and existing configuration of RouterA above. Which configuration changes are necessary to permit load balancing between RouterA and RouterB? (Choose two.)

- A.
- B.
- C.
- D.
- E.

Answer: A,B

Explanation:

The eBGP session is formed to RouterB's loopback (10.255.0.12) over two physical links. For eBGP peering to a loopback, RouterA must (1) enable multihop so TTL > 1, and (2) source BGP updates from its own loopback. Thus, add neighbor 10.255.0.12 ebgp-multihop 2 and neighbor

10.255.0.12 update-source loopback 0. Once the session is up, the two equal-cost routes to 10.255.0.12 allow load balancing across both links.

NEW QUESTION # 71

An HPE Aruba networking ClearPass server needs to be added in the configuration where Downloadable User Roles (DUR) are used.

What are the prerequisites for the AOS-CX Switch for DUR? (Choose two.)

- A. The ClearPass server can be added as IP or FQDN.
- B. A valid root certificate is required for the AOS-CX switch.
- C. A valid server certificate is required for the AOS-CX Switch.
- D. The ClearPass server needs to be added as FQDN
- E. Empty role names need to be present on the switch

Answer: A,B

Explanation:

For Downloadable User Roles (DUR), the AOS-CX switch must trust ClearPass, which requires a valid root certificate installed on the switch. The ClearPass server can be configured either by IP address or FQDN, allowing the switch to establish secure communication for DUR downloads. A server certificate on the switch itself or empty roles are not required.

NEW QUESTION # 72

Refer to the four numbered steps in the exhibit.

□ Which action is the first step in applying the role-to-role ACL on the traffic from mobile device M1 to role H2?

- A. The edge switch acts as the intermediate node and transfers the Group Policy ID over static VXLAN to dynamic VXLAN tunnel and forwards the packet to switch A1.
- B. The AP forwards the packet from M1 to gateway 1.
- C. Gateway 1 forwards the traffic over the static VXLAN tunnel to the edge switch; this packet carries the Group Policy ID corresponding to the role of M1.
- D. Switch A1 determines the destination role based on destination MAC or destination IP and enforces role-to-role ACLs.

Answer: B

Explanation:

Role-to-role enforcement starts when the client's traffic leaves the AP to the gateway. The AP forwards M1's packet to Gateway 1,

which then tags it with M1's Group Policy ID and sends it toward the campus over VXLAN for downstream role resolution and ACL enforcement. This first hop (AP → gateway) is step 1 before GBP propagation and policy enforcement occur on the access switch.

NEW QUESTION # 73

Refer to the exhibit and code sample.

What is the effect when you add the statement "neighbor 10.2.0.3 send-community both" to the ipv4 address family? (Choose two.)

- A. It causes R1 to allow the exchange of communities with NLRI records in both inbound and outbound direction.
- B. The feature will be enabled without consequence to the R1 established session with R2.
- C. It causes R1 to negotiate for the ability to import and export all type-1 and type-2 communities with R2.
- D. It will cause existing BGP peering between R1 and R2 to flap.
- E. It causes R1 to negotiate the ability to send and receive standard and extended communities with R2.

Answer: A,E

Explanation:

The send-community both command ensures that both standard and extended BGP communities are sent to the neighbor, and this capability is negotiated during session setup.

The send-community both command enables the router to attach community attributes to BGP NLRI updates in both directions, not just outbound.

NEW QUESTION # 74

The administrator pf a large company noticed that there are some problems with UCC sessions on a wired network. Some employees complain about dropped calls and poor quality. The administrator wants to monitor jitter on AOS-CX switches with IP SLA, but notices results spiking to 100%.

What should the administrator check first to correct monitoring to run as desired?

- A. CoPP settings
- B. number of NAE agents
- C. memory and processor usage
- D. source IP and source port combination

Answer: D

Explanation:

IP SLA jitter measurements rely on unique source IP and source port combinations. If the same combination is reused, the results can show spikes or incorrect 100% loss. The first step is to verify and adjust the source IP and port settings to ensure proper packet tracking and accurate jitter monitoring.

NEW QUESTION # 75

.....

Candidates who crack the HPE7-A06 examination of the HP HPE7-A06 certification validate their worth in the sector of information technology. The HP HPE7-A06 credential is evidence of their talent. Reputed firms hire these talented people for high-paying jobs. To get the HPE Campus Access Switching Expert Written Exam (HPE7-A06) certification, it is essential to clear the HPE Campus Access Switching Expert Written Exam (HPE7-A06) test. For this task, you need to update HPE Campus Access Switching Expert Written Exam (HPE7-A06) preparation material to get success.
