

# DP-300 Valid Test Dumps | Practice DP-300 Test

P.S. Free & New DP-300 dumps are available on Google Drive shared by PDFDumps: [https://drive.google.com/open?id=139GQE6KQgSOeRwMvCuxx5JTJARnl5q\\_1](https://drive.google.com/open?id=139GQE6KQgSOeRwMvCuxx5JTJARnl5q_1)

It is universally accepted that the exam is a tough nut to crack for the majority of candidates, but the related DP-300 certification is of great significance for workers in this field so that many workers have to meet the challenge. Fortunately, you need not to worry about this sort of question any more, since you can find the best solution in this website--our DP-300 Training Materials. With our continued investment in technology, people and facilities, the future of our company has never looked so bright. with our excellent DP-300 exam questions, you will pass the DP-300 exam successfully.

## Schedule exam

**Languages:** English, Chinese (Simplified), Japanese, Korean

**Retirement date:** none

This exam measures your ability to accomplish the following technical tasks: plan and implement data platform resources; implement a secure environment; monitor and optimize operational resources; optimize query performance; perform automation of tasks; plan and implement a High Availability and Disaster Recovery (HADR) environment; and perform administration by using T-SQL.

The DP-300 Exam covers a wide range of topics, including deploying and configuring SQL Server on Azure Virtual Machines, implementing high availability and disaster recovery solutions, managing security and access, as well as monitoring and optimizing database performance. Successful candidates will have a deep understanding of Azure SQL database services and be able to use tools such as Azure Portal, Azure PowerShell, and Azure CLI, to manage and administer databases on Microsoft Azure. Administering Relational Databases on Microsoft Azure certification is ideal for database administrators, database developers, and IT professionals who want to validate their skills and knowledge in administering relational databases on Microsoft Azure.

**100% Pass 2026 Microsoft Unparalleled DP-300: Administering Relational Databases on Microsoft Azure Valid Test Dumps**

Key Features of Administering Relational Databases on Microsoft Azure Updated Practice Material! The Administering Relational Databases on Microsoft Azure practice material comes with multiple unique features. These features make your Microsoft Exam Administering Relational Databases on Microsoft Azure test preparation process simple and quick. The top listed features of DP-300 study material are actual test questions, free demo facility, three months of free Administering Relational Databases on Microsoft Azure test questions updates, affordable rate, and a full satisfaction guarantee. Our Administering Relational Databases on Microsoft Azure test preparation material comes in DP-300 PDF, DP-300 desktop practice test software, and web-based DP-300 practice exam.

Microsoft DP-300 exam is designed for database professionals who want to validate their skills in administering relational databases on Microsoft Azure. DP-300 exam is a great way to demonstrate your expertise in database administration and management and showcase your ability to work with Microsoft Azure cloud services. By passing DP-300 Exam, you can earn the Microsoft Certified: Azure Database Administrator Associate certification.

## Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q152-Q157):

### NEW QUESTION # 152

You have an Azure SQL database that contains a table named Customer. Customer has the columns shown in the following table.

You plan to implement a dynamic data mask for the Customer\_Phone column. The mask must meet the following requirements:

The first six numerals of each customer's phone number must be masked.

The last four digits of each customer's phone number must be visible.

Hyphens must be preserved and displayed.

How should you configure the dynamic data mask? To answer, select the appropriate options in the answer area.

#### Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/sql/relational-databases/security/dynamic-data-masking>

### NEW QUESTION # 153

You have SQL Server on an Azure virtual machine that contains a database named Db1.

You need to enable automatic tuning for Db1.

How should you complete the statements? To answer, select the appropriate answer in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: SET AUTOMATIC\_TUNING = AUTO

To enable automatic tuning on a single database via T-SQL, connect to the database and execute the following query:

```
ALTER DATABASE current SET AUTOMATIC_TUNING = AUTO
```

Setting automatic tuning to AUTO will apply Azure Defaults.

Box 2: SET AUTOMATIC\_TUNING (FORCE\_LAST\_GOOD\_PLAN = ON)

To configure individual automatic tuning options via T-SQL, connect to the database and execute the query such as this one:

```
ALTER DATABASE current SET AUTOMATIC_TUNING (FORCE_LAST_GOOD_PLAN = ON)
```

Setting the individual tuning option to ON will override any setting that database inherited and enable the tuning option. Setting it to OFF will also override any setting that database inherited and disable the tuning option.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/automatic-tuning-enable>

### NEW QUESTION # 154

You have an Azure subscription.

You need to deploy an Azure SQL resource that will support cross database queries by using an Azure Resource Manager (ARM) template.

How should you complete the ARM template? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/managed-instance/create-template-quickstart?tabs=azure-powershell>

### NEW QUESTION # 155

Hotspot Question

You have an Azure subscription that contains an instance of SQL Server on Azure Virtual Machines named SQLVM1 and a user named User1. SQLVM1 hosts a database named DB1.

You need to ensure that User1 can perform the following tasks on DB1:

- Create jobs.
- View all jobs.
- Modify, delete, and disable the jobs the user created.

The solution must use the principle of least privilege.

Which built-in database role should you assign to User1, and where is the role defined? To answer, select the appropriate options in the answer area.

**Answer:**

Explanation:

### NEW QUESTION # 156

You have a new Azure SQL database. The database contains a column that stores confidential information.

You need to track each time values from the column are returned in a query. The tracking information must be stored for 365 days from the date the query was executed.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add extended properties to the column.
- B. Turn on Azure Advanced Threat Protection (ATP).
- C. Turn on Advanced Data Security for the Azure SQL server.
- D. Turn on auditing and write audit logs to an Azure Storage account.
- E. Apply sensitivity labels named Highly Confidential to the column.

**Answer: C,D,E**

Explanation:

C: Advanced Data Security (ADS) is a unified package for advanced SQL security capabilities. ADS is available for Azure SQL Database, Azure SQL Managed Instance, and Azure Synapse Analytics. It includes functionality for discovering and classifying sensitive data D: You can apply sensitivity-classification labels persistently to columns by using new metadata attributes that have been added to the SQL Server database engine. This metadata can then be used for advanced, sensitivity-based auditing and protection scenarios.

A: An important aspect of the information-protection paradigm is the ability to monitor access to sensitive data. Azure SQL Auditing has been enhanced to include a new field in the audit log called data\_sensitivity\_information. This field logs the sensitivity classifications (labels) of the data that was returned by a query. Here's an example:
