These core areas include the context of requirements engineering, elicitation, documentation, validation and negotiation, requirements management, and further development of requirements. CPRE-FL_Syll_3.0 Exam Questions are multiple-choice, and the passing grade is 65%.

ISQI IREB Certified Professional for Requirements Engineering. Foundation Level Sample Questions (Q49-Q54):

NEW QUESTION # 49

The following sentences apply to requirements models, EXCEPT:

- A. Requirement models have a lacking focus on quality requirements and constraints.
- **B. Requirements models do not have to be accompanied by natural language.**
- C. The focus on a single aspect makes it easy to understand the requirements modeled.
- D. Requirement models are less flexible than requirements written with natural language.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Models-diagrams, state charts, data models, etc.-offer abstraction and focus but cannot express every nuance. The handbook recommends always combining models with natural-language descriptions to clarify intent, cover corner cases and document quality requirements or constraints that do not fit the modeling notation. Models tend to be less flexible than free text and are primarily suited for functional aspects, so B and C are accurate. Focusing on a specific aspect indeed increases comprehensibility (D). The only incorrect statement is that models "do not have to be accompanied" by natural language; they should be.

NEW QUESTION # 50

A version number is typically composed of which components? (Select 2 answers.)

- A. ID
- B. Day/month
- C. Serial number
- **D. Version**
- **E. Increment**

Answer: D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The handbook states that version identifiers usually have at least two hierarchical parts: a version (major) and an increment (minor). For example, in "3.2", 3 is the version and 2 the increment; further qualifiers (build, date) may optionally be added. IDs, serial numbers or dates can be stored as additional attributes but are not the fundamental composition of the version number itself. Therefore, the standard structure is version plus increment, corresponding to options A and B.

NEW QUESTION # 51

Choose the correct sentence regarding phrase templates for requirements:

- A. "Will" is used for the strongest form of mandatory requirements.
- B. Even requirements using "should" are mandatory.
- C. "Shall" is used for mandatory requirements.
- D. "May" is used for requirements that are strongly desired, but not mandatory.

Answer: C

NEW QUESTION # 52

Which two statements are correct with regard to the introduction of a requirements engineering tool? (2 Points)

- A. The license costs are generally the greatest cost block relating to the introduction of a requirements engineering tool
- B. The requirements engineering processes must be clearly defined before introduction
- C. The introduction of a tool defines the future requirements engineering approach
- D. Risks associated with the introduction can be identified through a pilot operation

Answer: A,B

NEW QUESTION # 53

You would like to design a requirements document in such a way that it is particularly well suited to the project participants who are to continue working with it. Please select from the following statements the two most appropriate assignments of requirement properties to participants. (1 Point)

- A. For the developers the requirements must be easily changeable.
- B. For the project manager the requirements must be evaluated.
- C. For maintenance the requirements must be testable.
- D. For all participants the requirements must be consistent.
- E. For the tester the requirements must be practicable.

Answer: B,D
